8. Mutations of the "I Ching"

Having one day glimpsed, I should say encountered, the "Book of Earth and Heaven" 66, the I Ching, in the window of a bookseller in Rouen, it seemed to me that it must conceal some essential secret that I could understand, know. The "Comments" that accompanied it were like an invitation to discover it more closely, not only through the thought of the Sages who had bent over it, however lofty this thought was, the mysteries of which remained despite everything external to myself, but also directly, by analyzing it, by recomposing it, by rethinking it, by confronting it with my own inner reality.

This is how the I Ching gradually became my friend, the companion of my days and my nights, the source of my torments but also of my deepest joys, the center of all my research... This curious system makes "sticks" that reminded me of the writing of my childhood, this Chinese puzzle, I wanted to apprehend it, force it to its limits, master it! If he represented, as Tradition affirmed, all the possibilities of manifestation between "Earth and Heaven", then he must have held the key to the understanding of the universe, of each being, of each thing, and of their relations, and this key, he had to give it to me, at all costs.

66 J. Lavier, *The Book of Earth and Sky*.

THE MORE BALD DIAMOND

“Book of Transformations”, the I Ching has been and remains the instrument of my own transformation. For months, for years, I triturated it, dissected it, disintegrated it, reconstructed it, twisted it in every way, free of any constraint, of any a priori, because being neither a mathematician, nor a biologist, nor a scientist of somehow, it was easy for me to forget what I had never learned, and to approach it thus with a new spirit, in Boeotian...

It was then that, oscillating between intense joy and bitter disillusionment, I gradually discovered its framework, the mathematical structures, dry and cold, a skeleton. But there was nothing alive about it, apparently, simply one system among many others... I then wrote a first book, then a second⁶⁷, attempting to demonstrate, to organize, to structure, to connect, which seemed to me to be Life, but which was only a dead letter.

It was only after many years, when I had lost the will to discover, when he had imbued me with his aura, his spirit, his soul, that one marvelous day among all, a small, very small gleam appeared to me; and this gleam was like a tiny reflection of a distant light, that of a Royal Diamond crowned with the glory of the sixty-four “pearls” of the Yi King, and which approached in the infinity of space, to finally shine and radiate light. His life appeared to me; everything in the universe,

67 *From the Dragon to the Serpent, Essay on General Theory of Energy*, Paris, 1976. *From Lao Tseu to Plato, Philosophy of yesterday or Science of tomorrow*, Paris, 1976

THE MORE BALD DIAMOND

from the diamond to the stars, each blade of grass, each flower, each crystal, and the man himself, everything had as its framework, its "mathematical" skeleton, the 64 hexagrams of the I Ching. But this unique skeleton was dressed in a thousand shapes, a thousand colors, a thousand vibrations, the secret of which lay in the imagination of the Creator. And each form, each color, each vibration, was born, grew and changed, died and was constantly reborn from its ashes, evolving little by little from one infinity to another.

This is what I have tried to show previously, by describing the interplay of space and time, of matter and spirit, as I have discovered them over the years, and then relating to these traditional Chinese acupuncture and the even more subtle tradition of India and Tibet.

No doubt I could have stopped there, because everything has been said in these few chapters, but I am thinking of all those who, like me, need proof, are thirsty for knowledge, of all those for whom the demons Mathematical knowledge is necessary, even if this mathematics is not quite conventional, even if this knowledge is only the shadow of knowledge.

So, it remains for us to discover the I Ching and some of its practical applications; it is the I Ching of mathematicians, but also of philosophers and poets, because science and philosophy are ultimately only the reverse side of the true science of life, that of all times whose poetry his is inseparable, from Lao-Tseu to Pythagoras, and from Plato to Leonardo da Vinci...

THE MORE BALD DIAMOND

Indeed, behind the apparent, forbidding, mathematical aspect of the I Ching, hides all the symbolism of each of the monograms, bigrams, trigrams and hexagrams that compose it. Their “mutations” have, for more than 5000 years, intrigued and delighted the greatest Sages, from Confucius to CG Jung... By meditating on its apparently dry and sterile “sticks”, these Sages have accessed the highest philosophical and scientific speculations. rituals. The Commentaries that he inspired in them are of such universal significance that they undoubtedly constitute one of the greatest Books of humanity and a unique teaching, accessible to everyone, as long as one knows how to treat it. with the respect that is due to what is perhaps most sacred to man, Knowledge.

The consultation of the I Ching, which some consider as a game, is a ritual, a sacred art, whether it is a question of its material appearance as of its spirit, because it puts us in relation with reality, with cosmic truth, that of space-time, made up of infinity and eternity, and it is in meditation and inner silence that one must approach this monument of universal thought.

It is to the memory of Jacques Martin-Hartz⁶⁸ that I dedicate the following pages, and if some new light is projected on the interplay of energies in the universe and in man, thank him, for by his monumental work, he opened up to me all

⁶⁸ Jacques Martin-Hartz, *The Jade Dragon*, Atlas of Acupuncture.

THE MORE BALD DIAMOND

wide the doors of Far Eastern thought that Jacques Lavier's book had opened to me.

This study focuses on the organization, functions and laws of mechanical and cyclical regulation of the world of forms, to arrive at those of the evolution of consciousness.

But, since we are talking about functions and regulations, it is duration or Time together with Space that are concerned.

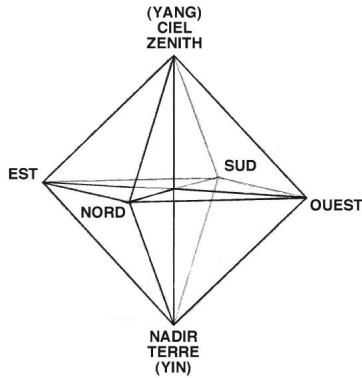

How can we consider the relations of space and time and what are the laws relating to them?

We all know that space has three dimensions or three aspects:

- 1st aspect: Zenith/Nadir, or according to Chinese terms, Heaven/Earth. Between Heaven and Earth is the manifestation, the latter corresponding to the following two aspects, that is to say those of the horizontal plane on which we are born, live and die.
- 2nd aspect: North/South. This aspect corresponds to the axis of extremes, from the darkness of the north to the light of the south.
- 3rd aspect: East/West. This last aspect corresponds to the axis of the intermediates, dawn from the east and dusk from the west.

All of these three aspects, or these three axes, will simply be represented in the form of three planes perpendicular to each other.
others :

- 1 horizontal plane
- 1 north-south vertical plane
- 1 east-west vertical plane

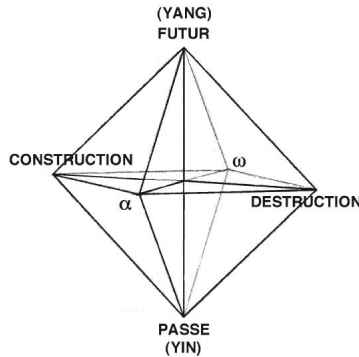

Time can be defined in the same way, according to three dimensions, or three aspects:

- 1st aspect: Past/Future, between which the temporal manifestation can take place by expressing itself in the following two aspects.
- 2nd aspect: linear/evolutionary/animic (spiritual). This aspect goes from a to **w**, from innocence (from non-knowledge), to the quintessence of all lived experiences. This is the axis of extremes: from the darkness of innocence to the light of knowledge (and not knowledge).
- 3rd aspect: sinusoidal/cyclical/formal (material). This aspect goes from construction to destruction, from birth to death. It is now about the axis of intermediaries, of what returns cyclically: dawn of construction, birth, memorization, and twilight of destruction, death, oblivion...

A representation according to three perpendicular planes will also reflect these three aspects:

THE MORE BALD DIAMOND

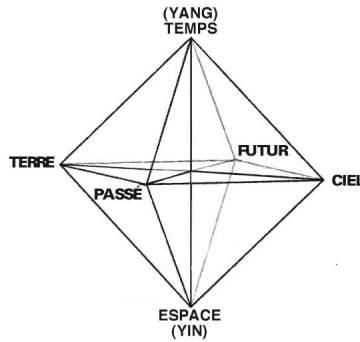

Space being inseparable from time, **space-time**, an entity it seems elusive, will also be indebted to three dimensions, three aspects:

- **1st aspect:** Space/Time (this is its very definition), in other words,
 - Yin energy of expansion = space
 - Yang energy of constriction = time

Function of space and time, that is to say between space and time, understood in space and in time, the spatio-temporal manifestation with its two complementary aspects, one temporal, and the other spatial:

- **2nd aspect:** Past/Future. It is the axis of extremes, from the darkness of the past to the light of the future.
- **3rd aspect:** Earth/Heaven. It is the axis of intermediaries, dawn of the Earth and celestial twilight. (It is through the intermediary of Earth and Heaven that the past-future axis manifests itself).

THE MORE BALD DIAMOND

Three perpendicular planes define once again these three aspects of spatio-temporal manifestation.

It remains for us to study this manifestation thanks to the Chinese Tradition which has known for more than five millennia the general computer making it possible to analyze and specify the whole of the manifested, I mean the Yi King and its 64 mutations (PI 13 and

The primordial universal law is that of the two complementary opposites, the “law of polarity”. The One can only be defined from Two: nadir and zenith, Earth and Sky, center and infinity, space and time, matter and spirit... Yin and Yang...

The Tao, which will be represented by the acronym T, as Emptiness, must thus, to begin to manifest itself, polarize into two extremes, two radical “energies”:

- Transcendent Energy • — — T1-Yin, Earth/Center
- Energy of Love ——— A1-Yang, Sky/Infinite

THE MORE BALD DIAMOND

The use of a double line for Yin, and a single line for Yang, makes it possible to graphically represent the two corresponding "monograms".

As we know that any unity can only be defined by Yin and Yang, antagonists and complements, in Yin, T1, taken as a unity, there is therefore Yin and Yang, and it is the same in the Yang, A1.

We then obtain, by this second polarization, four terms or four fundamental energies, the four energies of manifestation, of the third "pole", itself quadruple, between Earth and Heaven, in other words, the energies of the four "orients". "

(Plate 15, fig. 1)

Their graphic definition will be made through four "bigrams" each formed of two superimposed monograms read from bottom to top:

T2 vital energy, Transcendent, northern energy:	==
C respiratory energy, Oxidizing, eastern energy:	==
A2 Nutrient Energy, Food, Southern Energy:	==
G ancestral energy, Genetics, western energy:	==

By placing these four energies on a circumference (Pl. 15, fig. 2), in relation to the four orients to which they correspond, their order, clockwise, specifies the cycles of days and nights, but also those of the seasons as of all that is cyclical. Bigrams are then read from the center to the periphery.

Plate 13

THE MORE BALD DIAMOND

Life coming to us from the centre, from the nadir, from the cold, from death, via the north, then from the east which is “dawn” or birth, the rise of light, the north will be represented below.

Thus, the Transcendent energy T2 == twice Yin, corresponds to darkness, to the north, to midnight, to winter, to the womb, to the source of life; Combustion energy, C shows ~~by its lower, Yang line~~ that the light, that the shadow evaporates: it is dawn, intermediary between night and day, at ballast; it is the sprouting and growth of spring, it is the first breath of life.

Food energy, A2 twice Yang, corresponds to full light, to the south, to noon, to summer, to maturity; Genetic energy, G indicates by its lower ~~vert~~ trait, Yin, that the shadow rises and settles, and by its upper Yang trait, that the light vanishes: it is twilight, intermediate between day and at night, in the west, it's back to basics, it's decrepitude, the disintegration of autumn, it's crystallization, ossification, death!

Nevertheless, by giving the value 0 to Yin and the value 1 to Yang ~~the binary code is the following:~~ — —
(Pl. 16, fig. 1) —

T2 has the value 00	==	it comes from T1
G has the value 01	==	it comes from A1
C has a value of 10	==	it comes from T1
A2 has the value 11	==	it comes from A1

This order indicates a linearity, an evolution

THE MORE BALD DIAMOND

ranging from Yin to Yang, from 00 to 11 (see also [Pl. 15](#), fig. 2: internal arrows).

It should also be noted that the polarization of the two radical energies, Yin and Yang, into four fundamental energies, responds to two different logics:

The first, of a cosmological order, is that which we have defined: ([Pl. 16](#), fig. 1, solid lines)

T2 northern darkness	comes from T1 nadir and darkness
G western twilight	comes from A1 zenith and clarity (twilight follows clarity)
Eastern dawn	comes from T1 nadir and darkness (dawn follows darkness well)
A2 southern light	comes from A1 zenith and clarity

This tells us that:

T2 and C are the polarizations of T1
A2 and G are the polarizations of A1

The second logic, of a mathematical nature, takes into account the upper line of each bigram, a line which determines the Yin or Yang polarity of the lower line. Thus, we then have a different definition of the polarizations: ([Pl. 16](#), fig. 1, dotted lines) are the

T2  and G  polarizations of T1 are the 
A2  and C  polarizations of A1 

For the understanding of energetics, the first of these approaches, cosmological logic, will generally be used, whether it concerns the four fundamental energies or those which follow them.

Thus, according to the same principle, each of the four fundamental energies is polarized in turn to

THE MORE BALD DIAMOND

give, in total, eight secondary forces. Their graphic definition is carried out this time in the form of "trigrams" made of three superimposed monograms always read from bottom to top, or from the center to the periphery (Pl. 15, fig. 1, and pl. 16 , Fig. 1 and 2). They are organized either on a circumference or, in space, in relation to the 8 faces of an octahedron.

You ☳☳☳	force from the north, and in space, from the lower north
HAS' ☳☳☳	force from the northwest, and in space, from the upper north
G' ☳☳☳	strength of the west, and in space, of the lower west
VS' ☳☳☳	force from the southwest, and in space, from the upper west
G'' ☳☳☳	force from the northeast, and in space, from the lower east
VS'' ☳☳☳	force from the east, and in space, from the upper east
You'' ☳☳☳	force from the south-east, and in space, from the lower south
TO'' ☳☳☳	force from the south, and in space, from the upper south

On a circumference (Pl. 16 fig. 2), as on the octahedral diamond, we then see that the generation of the eight secondary forces from the four fundamental energies, has led to a clockwise rotational movement. 'a watch: the north has shifted to the east, from T2 to T', the east to the south, from C to C"... The generation, the construction of the universe, takes place in the clockwise; is this not the symbol of the Swastika, this thousand-year-old cross transmitted to us by the great traditions?

But let's not go any further for now, and look at what we found:

THE MORE BALD DIAMOND

- 2 radical energies, those of Earth and Heaven, Yin and Yang.
- 4 fundamental energies, those of the four orients, Transcendent, Fuel, Food and Genetic energies.
- 8 secondary forces, polarizations of the four primary energies yielding.

These are indeed the basic definitions of what is manifested, apparent, of any energy system in our three-dimensional world; this system manufactures or specifies energies, distributes them, and finally uses them.

The four fundamental energies are those of manifestation, between Earth and Heaven, and they play among themselves in the three dimensions of space, in the “three Hearths”, three by three, by “triplets”.

How to analyze the functioning of the three Hearths most simply, if not by using the four bigrams representing these four energies, and by noting all their mutations, three by three.

Now, 43 gives us 64 mutations, in other words 64 hexagrams each composed of three times two superimposed lines, of three bigrams.

The eight secondary forces are those that are distributed by the eight tetrahedral pyramids that make up the octahedral diamond, between Earth and Heaven; they play with each other the game of their polarity, two by two, by “doublets”, since they are the four previous polarized energies, four Yin and four Yang, in the image of the Earth, and in that of the Sky, these two great distributors of the energy of Life, these two hands of the One.

THE MORE BALD DIAMOND

Fig. 1

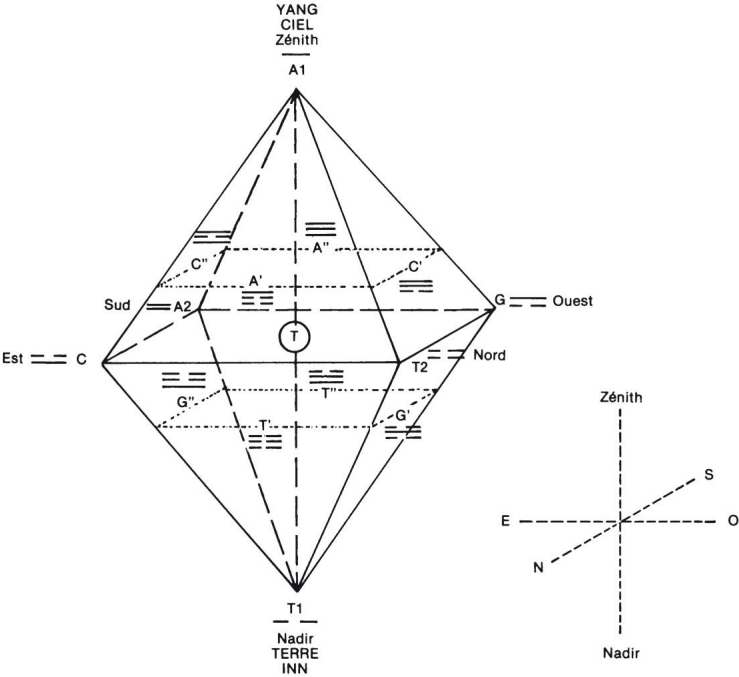

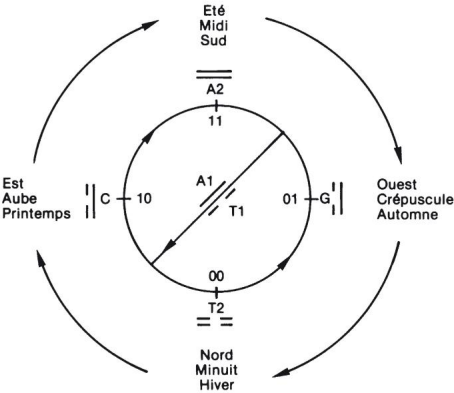

Fig. 2

THE MORE BALD DIAMOND

Fig. 1

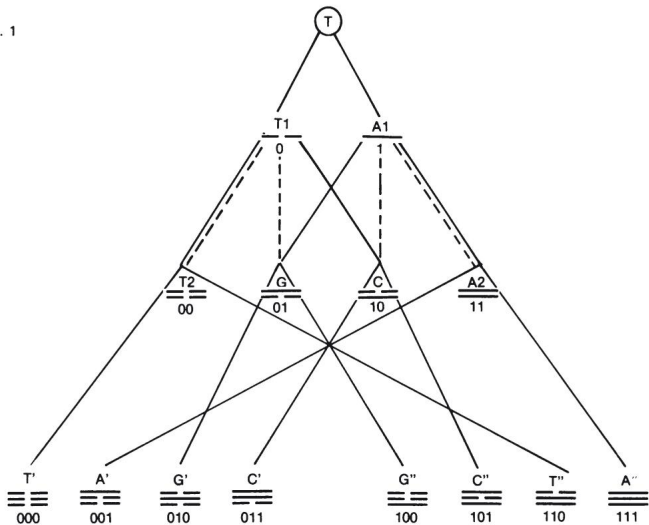

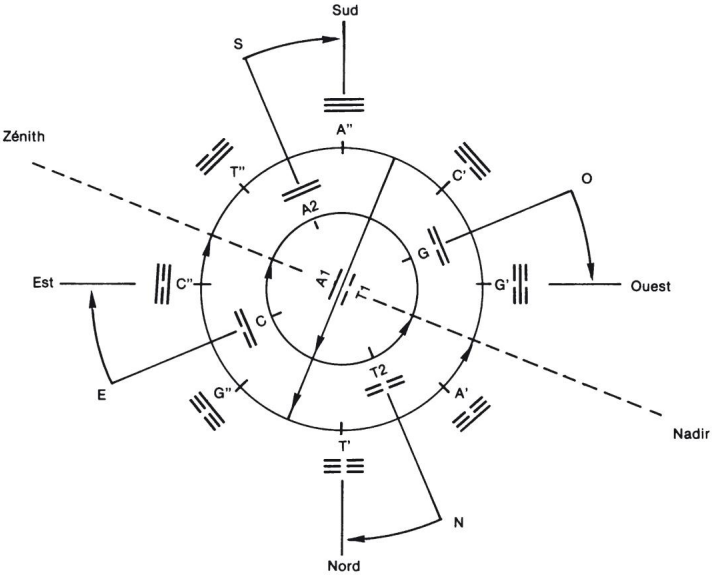

Fig. 2

Board 16

THE MORE BALD DIAMOND

Now, 82 gives us 64 mutations, in other words 64 hexagrams each composed of two times three superimposed lines, of two trigrams.

The study of these 64 hexagrams makes it possible to understand the operation of this generator, distributor of energies, in other words, by analogy, the operation of the eight marvelous vessels of acupuncture, like that of the eight groups of endocrine glands.

The two radical energies are those of Earth and Heaven, used by the "6 Qualities of Heaven and Earth" made of fire and cold, pressure (wind) and depression (heat), humidity and drought.

Transmitted by the eight secondary forces, these two radical energies play between them six by six. Now, 26 gives us 64 mutations, that is, once again 64 hexagrams in which we consider the six superimposed monograms of which each one is constituted. Their study will define the functioning of this "user of energies", that is to say, by analogy, of the 5 Elements of the Earth and the 6 Qualities of Heaven, of the 11 organs and viscera and of the 12 meridians of acupuncture, or even of the 23 amino acids specified by DNA.

64 hexagrams is the I Ching, but there are therefore three ways of studying it, depending on the components considered for each of the hexagrams (Pl. 1 and 14):

- three superimposed bigrams, these are the three vital functions of the three Hearths and their four fundamental energies.

THE MORE BALD DIAMOND

- two superimposed trigrams, these are the two aspects, Earth and Heaven, of all creation, of all generation, of all distribution of energy, and their eight polarized secondary forces coming from the three Hearths.
- six superimposed monograms, these are the 5 Elements of the Earth and the 6 Qualities of Heaven, users of the two radical energies of Earth and Heaven, specified in the three Hearths, then distributed through the intermediary of the eight secondary forces.

The analysis of the hexagrams of the I Ching thus gives the following details:

The lower (or internal) monogram defines the Yin or Yang polarity and therefore the type of energy of the hexagram, that is to say the polarization of the T principle in T1 (Yin) and A1 (Yang), in Earth and Sky, that is two zones of 32 hexagrams each (Pl. 14, central circumference).

The lower bigram defines the energy base of the hexagram, with the four fundamental energies, i.e. four groups or "quadrants" of 16 hexagrams each, and the three corresponding Hearths, including the three Heaters (Pl. 14, 3 circumfe following references).

T2	Transcendent Energy Median Hearth FM	
G	Gene energy	FI Lower Hearth
C	Combustion energy Upper	Hearth FS
A2	Food energy	FM Median Focus

The lower trigram defines the polarized energetic base of the hexagram, that of the eight secondary forces, ie eight sub-groups or "sectors" of eight hexagrams each (Pl. 14, 5th circumference).

THE MORE BALD DIAMOND

You	Transcendent energy Yin	Earth Food	<i>kun</i>
HAS'	energy Genetic energy Com	Mountain Gen	
G'	energy Genetic energy Com	Yin Water	<i>Kan</i>
VS'	energy Transcendent Yang	Yin Wind Marsh	<i>xun</i>
G''	Food energy	Yang Lightning	<i>Zen</i>
VS''		Yang Fire	<i>Li</i>
You''			<i>Dui</i>
HAS''		Yang Sky	<i>Qian</i>

The **two lower bigrams** define the play per couple of the four fundamental energies, that is to say sixteen series of four hexagrams each (PI. 14, 5th circumference).

1	TT 5GT		9CT 13AT	
2 GT	6 GG 10 GC 14 AG			
3	CT 7 GC 11 DC 15 AC			
4 TA	8 GA 12 AC 16 AA			

The play of the **three superimposed bigrams** forming a hexagram defines all the mutations of the four fundamental energies by triplets, that is to say a total of 64 mutations (PI. 14, 6th circumference).

Example :

- TTT = Transcendent energy + Transcen energy dante+Transcendent energy
- TGA = Transcendent energy + Genetic energy + Food energy

The play of the **two superimposed trigrams** forming a hexagram defines all the mutations of the eight secondary forces, by doublets, that is to say a total of 64 mutations (PI. 14, 8th circumference).

THE MORE BALD DIAMOND

Example :

- T'T' = Transcendent Yin energy+Transcen energy
Dante Yin
- T'A" = Transcendent Yin energy + Yang food energy...

The set of **six superimposed monograms** forming a hexagram defines the set of mutations of the two radical energies of Earth and Heaven, by six, that is to say a total of 64 mutations.

The set of monograms, bigrams or trigrams constituting a hexagram, determines a precise orientation:

- From the monograms, the bottom monogram defines the Yin or Yang area; subsequent monograms gradually determine the precise "magnetic" orientation of the hexagram.
- From the bigrams, the lower bigram determines a quadrant (TGCA); the mean bigram determines a series (from 1 to 16); the superior bigram determines the exact "magnetic" orientation of the hexagram.
- From the trigrams, the lower trigram determines one of the eight sectors (T'-A'-G'-C'-G"-C"-T"-HAS"); the upper trigram determines the exact "magnetic" orientation of the hexagram.

Coming from this whole, the relations applicable to the marvelous ships are the following.

The four fundamental energies define relationships of proximity, or "coupling", between the secondary forces:

THE MORE BALD DIAMOND

T — E. Transcendent	T' — E. Transcendent Yin	<i>Chong Mai</i>
	A' — E. Food Yin	<i>Yin Wei Mai</i>
G—E. Genetics	G' — E. Genetics Yin	<i>Yin Qiao Mai</i>
	C' — E. Combustive Yin	<i>Ren May</i>
C — E. Combustive	G" — E. Genetic Yang	<i>From May</i>
	C" — E. Oxidizing Yang T"	<i>Yang Qiao Mai</i>
A — E. Food	— E. Transcendent Yang A"	<i>Yang Wei Mai</i>
	— E. Food Yang	<i>Dai May</i>

The diametrically opposed secondary forces are antagonistic and complementary because of their exactly opposite polarities (ratio of the hexagrams of some compared to those of others):

T' — A" = E. Transcendent Yin – E. Alimentary Yang	<i>Chong Mai</i>
	<i>Dai May</i>
A' — T" = E. Alimentary Yin – E. Transcendent Yang	<i>Yin Wei Mai</i>
	<i>Yang Wei Mai</i>
G' — C" = E. Genetics Yin – E. Oxidizing Yang	<i>Yin Qiao Mai</i>
	<i>Yang Qiao Mai</i>
C' — G" = E. Oxidizing Yin – E. Genetics Yang	<i>Ren May</i>
	<i>From May</i>

This "antagonistic and complementary" relationship is therefore also valid for each of the diametrically opposed hexagrams.

Because of their couplings as well as their polarity, the “polarized” secondary forces (T'/T"-A'/A") are also “antagonistic and complementary”:

T' coupled to A' is antagonistic to T" (opposite polarity)
A' coupled to T' is antagonist of A" (opposite polarity)
G' coupled to C' is antagonistic to G" (opposite polarity)
C' coupled to G' is antagonistic to C" (opposite polarity)

THE MORE BALD DIAMOND

In the game of fundamental energies T2-GC-A2, the energies T2 and A2 coming in a direct line from T, Tao, through T1 and A1, are inseparable from each other as direct constituents of the Principle itself. .

It is in their relationship with the Midway Hearth that they are One:

Food and Transcendent Energy - Middle Hearth	
Genetic Energy	- Lower Hearth
Combustion Energy	- Upper Hearth

Finally, by studying the sixteen series of hexagrams more closely, we realize that there are two groups of these series, groupings different from those of the Yin and Yang zones that we have discovered. We have named them “little inn” and “little yang” (Pl. 14, 10th circumference). These “petit inn” and “petit yang” series will have the particularity of “generating” on the one hand the energies of the external functions of the meridians (petit inn series) and on the other hand those of the internal functions of the organs and the viscera (small yang series).

The study of “Periodicities69 ” will give us the following organization:

- “Little inn” series: 1-2-5-7-9-13-15
- “Little yang” series: 3-6-8-10-11-14-16
- Mixed series (2 small inn hexagrams and 2 small yang hexagrams in each): 4 and 12.

Let us recall first of all that each of the series, from 1 to 16, comprises four hexagrams and is

69 See chap. 15: *Periodicities and regulation*.

THE MORE BALD DIAMOND

defined by the two lower bigrams (tetragrams) common to these four hexagrams.

Without going into the details of their organization which we will discover with the *Periodicities*, we can now note that the last hexagram of the second series, TGA, presents an essential particularity: it is composed of the two trigrams T' and A' '.

According to the comments of the I Ching, these two trigrams tend to deviate from each other, the first, T' the "Earth" always sinking downwards and the second, A' the "Heaven," rising ever higher. Their movements therefore go in opposite directions. They thus represent the first polarization, Earth and Sky, T1 and A1, before the manifestation can take place through the intermediary of the four "orients" or the four fundamental energies... but also at the end of the manifestation, after the demonstration. This will have an enormous importance whose effects we will discover with the study of the genetic code.

Moreover, this hexagram, T'A' or TGA, is in correspondence with the north of the quadrant T defined previously, and the North is the point by which the center manifests itself and where everything returns. Finally, as a whole, still according to the comments, it means "stagnation".

The TGA hexagram can therefore be seen as a direct relationship with the center, as the "Center", before anything existed, after anything existed.

THE MORE BALD DIAMOND

A little further on, in the fourth series, two hexagrams in turn present important particularities: A'C" or TAG and A'A" or TAA.

The I Ching commentary tells us that the meaning of the hexagram TAG is "Traveller-Separation": the two trigrams that compose it (A' and C", Mountain and Fire) indeed go in opposite directions. : the flame rises, while the mountain always pushes down, immobilizes.

For its part, the hexagram TAA means "Retreat". Constituted by the lower trigrams A', Mountain, and upper A", Sky, it is thus torn between the mountain which is "immobility, delay, depression", and the sky which is "movement, vigor".

These two hexagrams will also be placed in the "Center" category, but with different implications from TGA, in the sense that they correspond more to the beginning of a manifestation, still unstructured, in a way unfinished, to forbidden meanings, to "a step back on one's own steps" according to the terms of the commentary. They are "non-sense" centers or punctuations, in fact the expression of the Master of the Heart Function, an organ which could not be structured, diffused throughout the organism, or even, in our solar system, of the Asteroid Belt, an unstructured planet, between the orbit of Mars and that of Jupiter. Here again we will discover the effects, in particular with the study of the genetic code.

Ultimately, we will have:

THE MORE BALD DIAMOND

series	quality	basic tetragrams	
1	small inn	TT	
2	small inn	XL	
3	little yang	CT	
4	Mixed	YOUR	
5	small inn	GT	
6	little yang	GG	
7	small inn	GC	
8	little yang	GA	
9	small inn	CT	
10	little yang	CG	
11	little yang	CC	
12	Mixed	THAT	
13	small inn	AT	
14	little yang	AG	
15	small inn	AC	
16	little yang	AA	

Finally, if we take into account the six monograms making up each hexagram, the "petit inn" series will correspond to the system of the twelve meridians and the "6 Qualities of Heaven", a system responsible for the external function of nutrition, defence, and adaptation of the organism; the "little yang" series will correspond, for their part, to the eleven organs and viscera of all the "5 Elements of the Earth" and to their qualities, together responsible for the

THE MORE BALD DIAMOND

internal, blood, nervous, respiratory, bone and locomotor⁷⁰.

However, these are only the structures, the skeleton. But this skeleton can take multiple forms, multiple colors, according to the imagination of the Creator: Universe of atoms and their particles, World of molecules and the DNA double helix, Archipelagos of crystals and cells. , complex plant, animal or human organisms, galaxies of stars and their multiple planets, all apparently so dissimilar, have the same framework, this same mathematical framework, all are made of the same energy vibrations...

⁷⁰ For the determination of the “little inn” and “little yang” series, see chap. 15, *Periodicities*.

9. Generation of the three heaters and the three hearths

Taking up the definition of a generative energy system and its cosmological polarizations, we find figure 1 (Pl. 17) on which the successive polarizations appear, from the Yin zone to the Yang zone and vice versa. The eight polarized radicals, analogous to the eight marvelous vessels, function by doublets, thus defining eight sectors and sixteen series of four doublets each.

Another representation of reality is that of fig. 2 (Pl. 17) in which the four basic radicals TGCA functioning in triplets, analogous to the four fundamental energies of the three Hearths, directly define sixteen series of four triplets each, including seven "little inn", seven "little yang" and two mixed, series 4 and 12.

The radicals/fundamental energies T, G, C or A play in triplets (3 superimposed bigrams in each hexagram) and the series 1 to 16 are defined by the two lower bigrams (Pl. 18). Thereby, _____

- the "petit inn" series will be structured in 3 levels:
 - **TA** series 1, 2, 4 (TAT-TAC triplets); 5, 9, 12 (CAT-CAC triplets); 13, 15/TT-TG-TA-GT-CT-CA-AT-AC
be **T** transcendent energy, original energy (*Yuan Qi*)

With food energy (*Gu Qi*)

We have said in effect that T and A are inseparable.

THE MORE BALD DIAMOND

- **G** series 2, 5, 7/TG-GT-GC
or **G** genetic energy, ancestral (*Jing Qi*)
 - **C** series 7, 9, 12 (CAT-CAC triplets), 15/GC-CT-CA
AC
or **C** combustion energy (*Qing Qi*)
 - the “little yang” series will be structured in 3 levels:
 - **TA** series 3, 4 (TAG-TAA triplets), 8, 12 (CAG triplets
CAA), 14, 16/TC-TA-GA-CA-AG-AA
let **T** transcendent energy (*Yuan Qi*), **A** food energy (*Gu Qi*)
 - **G** series 6, 8, 10, 14/GG-GA-CG-AG
or **G** genetic energy, ancestral (*Jing Qi*)
 - **C** series 3, 10, 11, 12 (CAG-CAA triplets)/ TC-CG
DC-AC
or **C** combustion energy (*Qing Qi*)
- In the “petit inn” as in the “petit yang”:

- The **TA level**, transcendent and nourishing energies, which comes from the center, is center, mediator, median.
- Level **G**, genetic energy, ancestral, stability, fidelity, memory, reproducibility, gift from the center, is below, inferior.
- Level **C**, comburent energy, of activity, of combustion, purifying, like the rising flame, is above, superior.

As we have seen:

- The three “small inn” levels, median, lower and upper, constitute a peripheral preheating, “3 Heaters” of the energy system.
- The three “little yang” levels, median, lower and upper, constitute a central boiler, “3 Hearths proper” of the energy system.

Both constitute the peripheral aspects and

THE MORE BALD DIAMOND

centers of the traditional Three Hearth system. Their distribution on the I Ching is as

follows⁷¹ : • 3 Heaters: series 1-2-4 (TAT TAC triplets)-5-7-9-12 (CAT-CAC triplets)-13-15;
• 3 Hearths proper: series 3-4 (TAG TAA triplets)-6-8-10-11-12 (CAG-CAA triplets)-14-16.

Note that in series 2, the hexagram TGA also belongs to the Hearths, but as a door to the Centre, before anything exists and after anything has existed⁷².

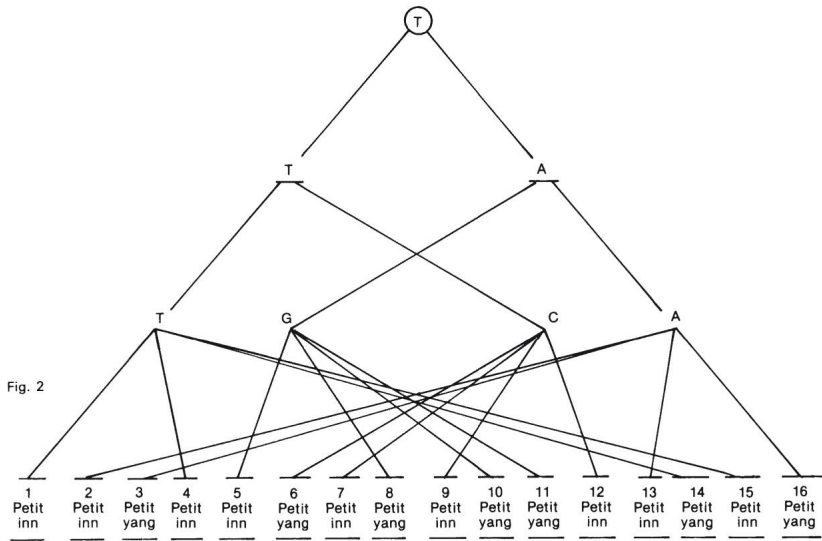

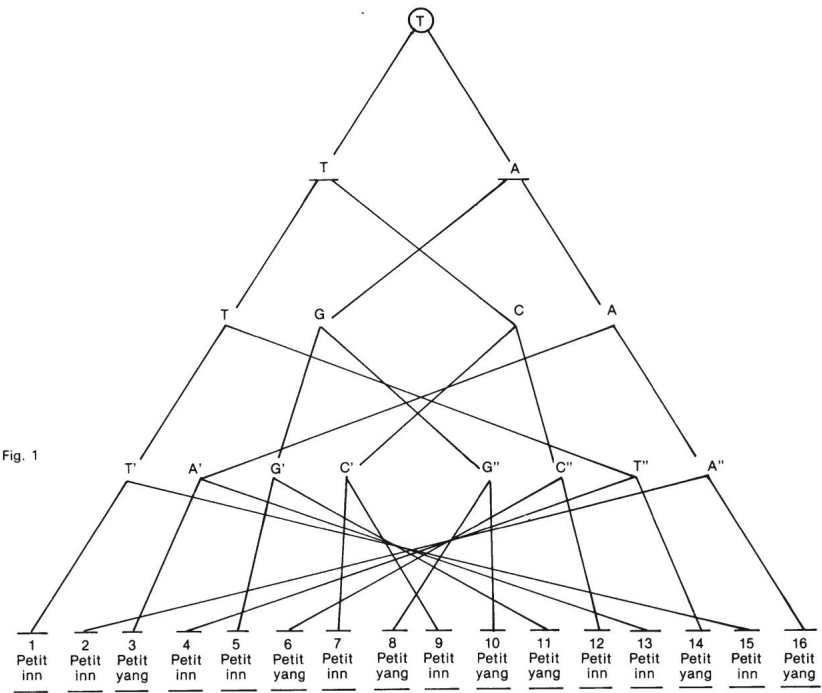

The three “small inn” levels will therefore have a Yang peripheral function of receiving and “pre-digestion” of the energies coming from the previous generating system:

1. **Midline heater:** digests **T** and **A** energies, transcendent and nourishing.
2. **Inferior heater :** receives and transmits **G**, genetic energy intact .
3. **Upper heater:** digests **C** energy , comburent.

The three “small yang” levels will have a central Yin function of assimilation of digested energies and energies coming directly from the previous system, of elaboration of energies usable by their own energy system:

⁷¹ See [pl. 17](#) and [18](#).

⁷² See chap. 8, *The Mutations of the I Ching* and chap. 15, *Periodicities and regulation*.

THE MORE BALD DIAMOND

- **The Median Hearth** assimilates all the energies, but first **T** the vital principle and the food energy **A** and mainly elaborates nutritive energy.
- **The Lower Hearth** assimilates, or rather specifies the genetic energy **G** for the stability and fidelity of reproduction of the other energies; but cannot develop something new, we will see later why, only to support the other two households.
- **The upper Hearth** assimilates the combustion energy **C**, accelerating, defensive, purifying and elaborates on everything the defensive, eliminating energy.

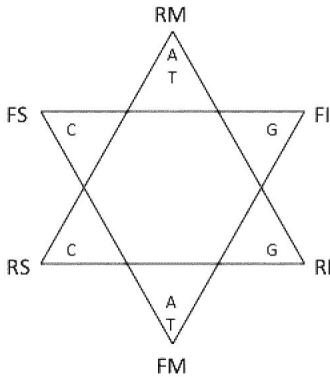

Figure 9

Indeed, if we follow the cycle of series and “little inn” hexagrams, 3 Heaters, starting from series 1, to the north — where does the flow of energy from the principle **T** come from through the series **TT**, series 1 — and in the direction of the generation of life, by the east then the south and the west, senestrogyral direction, we find:

series 1- TT in T , is TT E. Transcendent	
	in T , E. Transcendent
	Median Heater

THE MORE BALD DIAMOND

series 9-CT in	C, is CT E. Oxidizing and Transcendent in C, E.
	Oxidizing Upper and Middle Heaters
12-CA series in	C, is CA E. Oxidizing and Food (CAT-CAC) in C, E.
	Oxidizing Upper and Middle Heaters 13-AT series in A,
	is AT E. Food and Transcendent in A, E. Food Heater
Median	
15-AC series in	A, is AC E. Alimentary and Oxidizing in A,
	E. Alimentary Mid and Upper Heaters series
	7-GC in G, is GC E. Genetics and Oxidizing
in G, E. Genetics	Lower and Upper Heaters series 5 -GT in
	G, is GT E. Genetic and Transcendent in G,
	E. Genetic Lower and Midline Heaters
4-TA series in	T, is TA E. Transcendent and Food (TAT-TAC)
	T, E. Transcendent
	Median Heater
series 2-TG in	T, is TG E. Transcendent and Genetic in T, E.
	Transcendent Midline and Lower Heater

This set actually corresponds to the evolution sui
boasts:

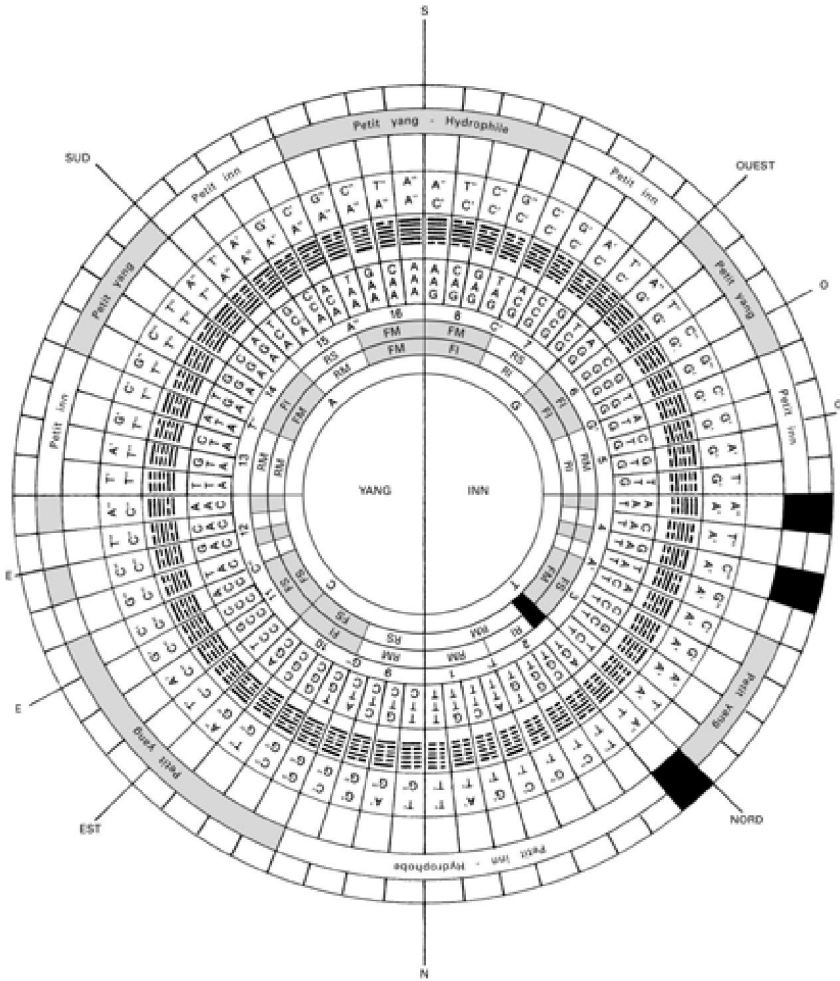

in 1-TT the	transcendent energy is master in the Yin zone. in 9-
CT the combustion	energy brings, from the transcendent energy, the combustion, the movement and the elimination of waste.
in 12-CA	continuation of the action of combustion energy with food energy supply.
in 13-AT	food energy takes shape, linked to transcendent energy.
in 15-AC	food energy intervenes with combustion energy.

THE MORE BALD DIAMOND

in 7-GC the	genetic energy appears to ensure the fidelity and the stability of the forms. Combustion energy provides combustion and waste disposal.
in 5-GT the	genetic energy benefits from a new supply of transcendent energy.
in 4-TA the	transcendent energy continues its work with the additional contribution of food energy.
in 2-TG the	transcendent energy and the genetic energy will thus be transmit to the central function of the three Foyers.

THE MORE BALD DIAMOND

series 4 — TA in	T, is TA E. Transcendent and Food (TAG-TAA)
	in T, E. Transcendent
	Median Focus
series 3 — TC in	T, is TC E. Transcendent and Comburante
	in T, E. Transcendent
	Middle and Upper Hearths

Here again the evolution of energies is marked by the following way:

- in 10-CG — the combustive energy ensures the transmutation of the energies coming from the preceding generative system and the three Heaters, and the genetic energy, the stability and the fidelity of reproduction of the Yin structures.
- in 11-CC — the combustion energy reaches its maximum power to ensure the transmutation of the energies received.
- in 12-CA — the combustion energy continues its work, is purified and transmuted into defensive and eliminatory energy. The food energy appears to nourish the whole being constituted.
- in 14-AG — the food energy is amplified and the genetic energy once again maintains the stability and fidelity of the structures.
- in 16-AA — purified food energy has become nutritive energy.
- in 8-GA — genetic energy boosted by food energy but never transmuted ensures the fidelity and stability of reproduction in its entirety.
- in 6-GG — genetic energy continues construction stable and faithful structures.
- in 4-TA — the transcendent energy intervenes for the first time, complementing the action of alimentary energy and ensuring the life of the organism.

THE MORE BALD DIAMOND

- in 3-TC — we only find the transcendent and combustion energies: the latter has become defensive energy and eliminates the last toxins. The genetic and alimentary energies have been transmitted; the first in its entirety, the second purified has become nutritive energy.

The three Hearths are indeed the system of assimilation and transmutation of the preceding energies, thus elaborating the energies usable by their own energetic system.

10. He Tu: Generation of “six Qualities of Heaven” 12 components Generation of “five Elements of Earth” 11 components

In man, the three Hearths, the first stage of an energy system, work out two great energies, the nutritive energy (*Ying Qi*), starting from the food energy, and the defensive and eliminative energy (*Wei Qi*), coming particularly from respiration, from combustion energy which burns waste.

Complementary to the combustive and alimentary energies, the transcendent and ancestral energies take part in this elaboration: let us remember that the fidelity and the stability of reproduction of the structures are ensured by the ancestral, genetic energy, and that the energy of Life itself, the transcendent energy, comes from the “Generating Principle”

The distribution of the two energies, nutritive and defensive, will require a special structuring of the energy system being developed: a "generator", the second stage of this system, distributor of energies with eight components, will therefore ensure their distribution. , the eight secondary forces proper to it being in some way polarizations of the four fundamental energies. This is how these twelve energies thus grouped together in two main forms, nutritive energy and defensive energy, will form the third stage of the system.

THE MORE BALD DIAMOND

energetic, stage of use of the energies elaborated and distributed by the two preceding stages.

The simplest model we have to study this distribution of energies is undoubtedly that of the eight trigrams oriented according to the organization of Emperor Fu Xi, the *He Tu* (Pl. 19, fig. 1), a model previously studied . We will see later how the I Ching and its 64 hexagrams can allow us to clarify certain particular points.

A first approach will allow us to get a general idea of this distribution of energies.

We have seen that from the primordial polarization, that of Earth and Sky, of the nadir and the zenith, Yin and Yang, Transcendent energy and energy of Love, **T1** and **A1** (central circumference), the four “fundamental energies” of the four cardinal points: north, east, south, west — the four energies of manifestation, between Earth and Heaven, transcendent energies **T2**, comburent C, alimentary **A2**, genetic **G** (the intermediate circumference corresponds to this quadruple center).

The four fundamental energies give rise, in turn, to eight “secondary forces” (external circumference: the surface), thus determining a clockwise movement, the north (N) shifting from **T2** in **T'**, the east (E) of **C** in **C'**, the south (S) of **A2** in **A'**, and the west (W) of **G** in **G'**: the creation, the “generation”, is carried out clockwise.

THE MORE BALD DIAMOND

Finally, we must remember that, according to tradition, Life comes from the cold, from death, from the north, and appears in the east with the dawn which is "birth".

Thus, the generation starting from the *He Tu*, model of distribution of the four fundamental energies and the eight secondary forces, will be carried out in the following way.

In the beginning, the first energy of the manifestation, the transcendent energy of the north (N), **T2**, in depth, in the $\equiv \equiv$, center. It can only appear by moving east, northeast, through it. This energy has a maximum of Yin: two Yin traits define it. We will therefore then necessarily have an inversion of polarity, from Yin to Yang, and from the center (Yin) to the surface (Yang).

We find on the surface, in the Yang zone, to the northeast, the genetic energy, **G''**, $\equiv \equiv$.

In the same yang, superficial zone, it is then the search for an even more Yang, more superficial energy: combustion energy, **C''**, in the east. $\equiv \equiv$

This energy is at the limit of the Yang maximum of the Yang zone defined by **A1**, zenith or "Midheaven". We will therefore have an inversion of polarity to find the Yin, the depth.

Still clockwise, the first Yin energy encountered is the combustion energy, **C'**, to the southwest. $\equiv \equiv$,

Being in the Yin zone, deep, we are then looking for an even more Yin, deeper energy: genetic energy, **G**, in the center. This energy being in the limit of the maximum

THE MORE BALD DIAMOND

defined by **T1**, ~~and~~ or "Middle of the Earth", we will therefore have an inversion of polarity to find the area and the Yang.

The first Yang energy available on the surface is the transcendent energy, **T''**, in the south-east, but be a step back that we are not allowed to perform, since generation can only be done forward, clockwise, not counterclockwise. So we are left with only one **superficial possibility**, the next Yin energy, genetic energy, **G'**, in the west. This is related to the maximum Yin limit of the Yin zone, **T1**, ~~thus there~~ we have a new inversion of polarity, from the surface to the depth, and from Yin to Yang.

We should thus pass in the center, in the Yang zone, that is to say find the combustion energy, **C**, in the east, the only possibility that remains to us in the direction of clockwise. But as one has come from the center, from **G**, it is impossible to return there, one must therefore continue, always in the sense of generation, and remain on the surface. The problem being the same as before with regard to **T''**, to the south-east, which would be a step back, we find **A'**, to the north-west; sort of creating a "hernia" in the **T1 wall**. It is only after this inversion of polarity from Yin zone to Yang zone and from surface to depth.

We finally find the center where we had not been able to go previously, with the combustion energy, **C**,

THE MORE BALD DIAMOND

==, to the East. In turn, this energy is at the limit of the maximum of Yang of the Yang zone, **A1**, **☰**. We will then have a reversal of polarity to find the Yin, and the surface area following the center.

The only Yin energy which remains available is the transcendent energy, **T**, **☷**. This is a step back, but in fact it is as if this energy **T** put us in relation with the whole of the Yin zone, **T1**, since it comes, in the continuation of the polarizations, in **☷** direct line of **T1**, with a maximum of three Yin lines. Following it, there will therefore be a new inversion of polarity from Yin to Yang. It is impossible for us to go back in depth, since we come from there.

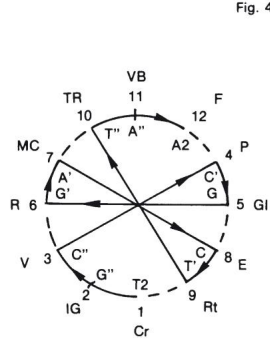

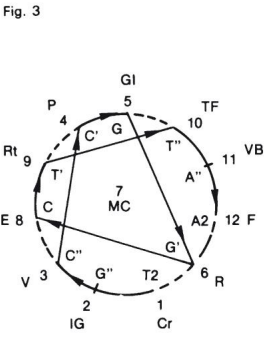

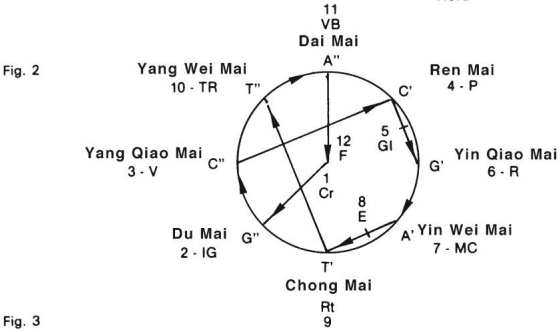

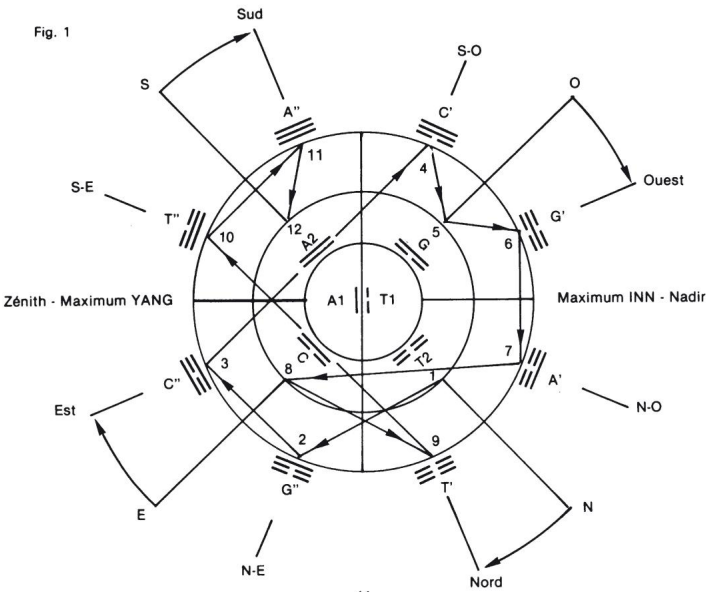

We now reach the transcendent energy, in surface **T**, **☷**, and in Yang zone, in the south-east.

In the same Yang zone, search for an even more Yang, more superficial energy: alimentary energy, **A**, **☰**, in the south-east, which has a maximum of three lines. After this, there will therefore have a last inversion, not from Yang to Yin, since there are no more Yin energies available, but from surface to depth.

From the surface, we pass to the center, to end up finally to southern food energy with **A2**, **☷**.

Schematically, all of this generation of energies of the third stage of an energy system, that of the use of energies, corresponds to **pl. 19**, fig. 2.

THE MORE BALD DIAMOND

THE MORE BALD DIAMOND

We have said that this level is differentiated into internal and external functions, the first corresponding to the 11 organs and viscera in the human organism and the second to the 12 acupuncture meridians.

So what are the analogical correspondences 12 energies then 11 organs and viscera?

Let us first recall the analogical relationship of each of the eight secondary forces with the eight marvelous vessels which intervene in acupuncture (Pl. 19, fig. 2).

When in 1973 I began to elaborate the theory of energetics, I had in mind the two series each comprising eight parameters but of which, to my knowledge, the following analogies had never been considered: the eight trigrams (*Ba Gua*) according to the and the eight wonderful *He Tu*⁷⁴ vessels (*Qi Jing Ba Mai*).

In the series of eight trigrams, four were Yin-based and four Yang-based, the extreme Yin and Yang being indicated by the two trigrams comprising lines of the same nature (three Yin lines in the north, or three Yang lines in the South).

In the series of eight marvelous vessels, there were also four Yin and four Yang, and in addition,

⁷⁴ In most traditional texts, only the relationships of the 8 trigrams according to the "*Lo Shu*" with the 8 master points of the marvelous vessels are given. However, the *Zhen Jiu Da Cheng* of Yang Ji Zhou, and the *Qi Jing Ba Mai Kao* of Li Shi Zhen give indications making it possible to establish a relation between the Master points and the organization of the trigrams according to *He Tu*. (See Chapter 39).

THE MORE BALD DIAMOND

two marvelous vessels seemed to me to correspond to the extremes, on the one hand the marvelous posterior median Yang vessel, *Du Mai*, on the other hand the marvelous anterior median Yin vessel, *Ren Mai*.

I also knew that the master points of the eight marvelous vessels were located respectively on eight different meridians and by following the indications of master Li Shi Zhen, that the marvelous bucket vessels distributed energy to the meridians. From there to consider that the model of distribution of energies to the meridians by the marvelous vessels was found, by analogy, in the eight trigrams of *He Tu*, there was only one step which I gladly took.

I thus began in this research, by situating the *Du Mai* in the south and the *Ren Mai* in the north, in analogy with the extreme trigrams Yang and Yin. According to the known couplings, the *Yang Qiao Mai* must have been in the southeast and the *Yin Qiao Mai* in the northwest. As for the other four marvelous vessels, I placed the *Chong Mai* to the southwest near the axis of Yin-Yang inversion and, diametrically opposite, to the northeast, the *Dai Mai*. Finally, still according to the neck ranges, the *Yin Wei Mai* came to the west and the *Yang Wei Mai* to the east.

For weeks and months, I worked tirelessly on this data... to no avail. Nothing

75 In the 16th century, in his General Compendium of Chinese Materia Medica, Master Li Shi Zhen specified that the 8 marvelous vessels were not conditioned by the overflows of the 12 meridians, but that it was the marvelous vessels that conditioned these 12 meridians.

THE MORE BALD DIAMOND

did not come out. The system was flawed. However, it had taught me to reason "Chinese style", to wipe out all my knowledge, to think only according to Tradition... and common peasant sense, that of observation day after day, month after month, year after year, of the laws and cycles of nature.

And then one day, meeting Master Charles Laville-Méry, I had the idea of asking him if, in an ancient text, he would have found any analogical correspondence between a marvelous vessel and an orientation. He then gave me the definitive answer: "Of course, he told me, the *Chong Mai* is in the north! It is Li Shi Zhen who specifies it in the *Qi Jing Ba Mai Kao*. »

I then resumed the whole system of analogical correspondences: *Chong Mai* in the north meant *Dai Mai* to the south, *Yin Wei Mai* to the northwest, *Yang Wei Mai* to the southeast. But this also meant that the axis of Yin-Yang inversion of the trigrams corresponded on one side, to the southwest, to the *Ren Mai*, and on the other, to the northeast, to the *Du Mai*, and that the *Yin Qiao Mai* was in the west and the *Yang Qiao Mai* in the east!

The marvel was then accomplished before my eyes: the distribution of energies to the meridians by the marvelous vessels was functioning. It responded to the laws of Yin and Yang, of inversion of polarity, not only general, but also between surface and depth. This is what we are discovering.

Let us now specify the analogical relations of the eight marvelous ships, their Master points and

THE MORE BALD DIAMOND

of the eight secondary forces represented by the eight trigrams (Pl. 19, fig. 2).

		secondary forces		marvelous ships	
You	☶	<i>kun</i>	Earth	<i>Chong Mai</i>	Rt 4
HAS'	☷	<i>Gen</i>	Mountain Yin Wei Mai MC 6		
G'	☵	<i>Kan</i>	Water	<i>Yin Qiao May R 6</i>	
VS'	☴	<i>xun</i>	Wind	<i>Ren May</i>	P7
G''	☳	<i>Zen</i>	Lightning	<i>From May</i>	GI 3
VS''	☲	<i>Li</i>	Fire	<i>Yang Qiao May V 62</i>	
You''	☱	<i>Dui</i>	Swamp	<i>Yang Wei Mai TR 5</i>	
TO''	☴	<i>Qian</i>	Sky	<i>Dai May</i>	VB 41

For their part, the four fundamental energies of the four orients have for analogical correspondences the four energies of the three Hearths:

T2	☰	Original, Transcendent, vital energy, <i>Yuan Qi</i> , of the Median Hearth
G	☷	Genetic energy, ancestral, <i>Jing Qi</i> , of the lower Hearth
vs	☲	Combustion, respiratory, <i>Qing Qi</i> energy, from the Upper Hearth
A2	☷	Food energy, <i>Gu Qi</i> , of the Median Hearth.

***Distribution by the eight marvelous vessels
(Pl. 19, figs. 1 and 2)***

The first energy that is generated is the transcendent, vital energy, **T2**, which comes from the centre, from the north, the great general distributor of energies. At the level of the third floor, it can only become

THE MORE BALD DIAMOND

the energy which manifests itself in the form of the Heart, the great general distributor of blood and life.

The Heart, Cr, thus appears through the intermediary of the northeast and the marvelous vessel *Du Mai*, in **G'** ; this second force, **G'**, genetic force Yang, must therefore be, in a way, a corollary of the first, especially since it is found in quadrant C, corresponding to combustion energy.

The Small Intestine, GI, in which the blood is charged with energy, through the intermediary of the intestinal villi which plunge, like the "roots" of a tree, into the humus of the food bolus, will thus be the case. culmination. 3 IG, master point of *Du Mai*.

In **C'**, the *Yang Qiao Mai* will in turn generate, from its combustion force Yang, a viscus and its energy, the Bladder, V, whose function will be the combustion, purification and elimination of waste. Energy Yang, in other words fluids (material Yin). 62 V, master point of the *Yang Qiao Mai*.

In **C'**, *Ren Mai*, we find the combustive force Yin, but in quadrant G, corresponding to the genetic energy. The structuring of the forms appears, the crystallization, after the elimination of the first impurities by the preceding viscus, the Bladder. It is now the first breath, with the Lungs, P, and their energy, which manifests. Oxidations can occur. 7 P, master point of *Ren Mai*.

We return to the center with the genetic energy **G** which proceeds from the same activity. With "organic" oxidations it is also the elimination of Yin waste, energy, in other words materials, Yang:

THE MORE BALD DIAMOND

it will be the Large Intestine, GI, and its energy, which will come from there.

In **G'**, *Yin Qiao Mai*, it is still the genetic force, of structuring, of fixity, of transmission of the genetic capital, allowing the stability and fidelity of reproduction; the skeleton is the first manifestation, the archetype, and it will be the Kidneys, R, and their energy, which will come from it. 6 R, master point of *Yin Qiao Mai*.

In **A'**, *Yin Wei Mai*, it is the food force Yin, but also in quadrant **T2**, the transcendent, vital energy that we find. Linked to **T2**, and to the Heart which comes from it, this force is in a way its "Master", since it brings it the superficial alimentary force (**A'**) . But on the other hand, we have seen that it had been necessary to pass from **G'** to **A'**, from *Yin Qiao Mai* to *Yin Wei Mai* (Pl. 19, fig.1), when we should have had an inversion of polarity and move into the Yang zone. Moreover, **A'**, *Yin Wei Mai*, is blocked between the Yin maximum limit of the Yin zone, **T1**, nadir, and the Yin maximum limit of the **T2 quadrant**, north (N). — — ,

= = ,

Thus, **A'**, *Yin Wei Mai*, outlet of the preceding genetic force, represents a "cul-de-sac", we spoke earlier of "hernia", where this genetic force is blocked, unable to be only transmitted to the outside, without ever being able to be renewed. The energy of the third floor coming from **A'**, from *Yin Wei Mai*, therefore has a double aspect, that of "Master of the Heart", MC, but also that of Master of the genesis of the organism, of Master of sexuality . To this double

THE MORE BALD DIAMOND

title, the Master of the Heart cannot structure itself as an organ; it will be diffused throughout the body. 6 MC, master point of *Yin Wei Mai*.

In C, combustion energy, central, we are also in zone **A1**, zone of Heaven, of love, of the gift, of food. It is the Stomach, E, and its energy which thus appears as the center of connection of the comburent, respiratory energy and the energy of food.

In **T'**, *Chong Mai*, we find a "center", with the three Yin lines of the trigram corresponding to the north, but on the surface: it is the transcendent force Yin.

This force which thus presides over the manifestation of the All will be the portal of vital energy, the conductor of the whole, with the Spleen, Rt, and its energy, which comes from it⁷⁶. 4 Rt, main point of the *Chong Mai*.

In **T''**, *Yang Wei Mai*, it is still the transcendent force, but Yang, in quadrant A2, food energy.

We thus find united the two transcendent and alimentary energies from which flow the other two, combustion and genetic energies. It is a sort of summary, a superficial synthesis of all the organs and viscera of the 3 Hearths: the triple Hearth, TF.

More precisely it is about the exocrine pancreas, viscus Yang, and its energy. 5 TR, master point of *Yang Wei Mai*.

In **A''**, *Dai Mai*, the alimentary force is purified, it has become the nutritive energy, and it appears with the Gall Bladder, VB, receptacle of the bile, purified energy of the organism. 41 VB, master point of the *Dai Mai*.

⁷⁶ See chap. 31: *Spine, acupuncture points and chakras*.

THE MORE BALD DIAMOND

In **A2**, we return to the center, to the fundamental Food energy; we then end up at the receptacle of all the energies produced and distributed, at the opposite pole of the Heart (Cr) distributor of blood and life, at the Liver, F, and its energy, in particular that of the sugars it stores in the form of glycogen.

This is how twelve functions, but only eleven organs, are structured from the four fundamental energies and the eight secondary forces, according to a very precise order. During fetal life, the appearance of the main organs does indeed take place, it seems, in this order, with at the end of the third week, the Heart, Cr, then in the fourth week, in the order, Small Intestine, GI, Bladder, V, Lungs, P, Large Intestine, GI, Kidneys, R, and in week five, Stomach, E, and Spleen, Rt. An apparent contradiction concerns Liver, F, and Gallbladder, VB, which appear in the fourth week after the Kidneys, R. However, the fibrous and hematopoietic tissue of the Liver is found only in the fifth and sixth week, that is, after the formation of the Spleen, Rt, and the Stomach, E... Similarly, it should be noted that with regard to the Stomach, E, which is formed from the anterior segment of the primitive Intestine, it is very difficult to specify its date of origin. differentiation, before or after the Spleen, Rt.

Generation and structuring of organs and viscera (Pl. 19, fig. 3)

Schematically, the generation of the eleven organs and viscera will cause a particular structuring.

THE MORE BALD DIAMOND

which will take into account the various inversions of polarity or planes defined above.

The Heart, Cr, appears first, in the north, it is a Yin organ, coming from the **T2** center through the intermediary of **G"**, *Du Mai*; it is followed immediately, clockwise, direction of generation, by Small Intestine, IG, and Bladder, V, viscera Yang, coming from **G"**, *Du Mai*, and **C"**, *Yang Qiao Mai*.

Passing from **C"**, *Yang Qiao Mai* to **C'**, *Ren Mai*, from Bladder, V, to Lungs, P, we pass from a Yang viscus to a Yin organ with inversion of polarity. The Lungs (P) cannot therefore follow directly and one must pass through the interior of a fictitious circumference, without however going to a diametrically opposite point, since there are only 11 structured organs, which eliminates all opposition. As we have passed through the inside of the circumference, it is impossible to go back there to mark the inversion of polarity of Lungs, Yin organ to Large Intestine (GI), Yang viscus, coming from G. Le Gros Intestine follows the Lungs.

After Large Intestine (GI), viscera Yang, polarity inversion to go to Kidneys (R), organ Yin, generated by **G'**, *Yin Qiao Mai*, therefore passage through the interior of the circumference.

After the Kidneys (R), we should find the Master of the Heart and Sexuality (MC), generated by **A'**, *Yin Wei Mai*, but the Master of the Heart is diffused throughout the organism. We must therefore go back through the interior of the circumference and Master of the Heart (MC) to then find Stomach (E), Yang viscus, then Spleen (Rt), Yin organ, coming respectively from

THE MORE BALD DIAMOND

C and of **T'**, *Chong Mai*. One cannot, after Stomach, go back through the interior of the circumference, since one comes from there.

After the Spleen, Yin organ, inversion and passage through the interior of the circumference, to find the Triple Hearth (TF), the exocrine Pancreas, Yang viscus, generated by **T''**, *Yang Wei Mai*, then Gall Bladder (VB) , vis cera Yang, generated by **A''**, *Dai Mai*, and finally the Liver (F), organ Yin, generated by **A2** and which comes to the surface through the intermediary of **A''**, *Dai Mai*.

An apparent circulation of energies thus seems to manifest itself according to the fictitious circumference which connects the organs and viscera, in the order: Heart (Cr), Small Intestine (IG), Bladder (V), Stomach (E), Spleen (Rt) , Lungs (P), Large Intestine (GI), Triple Hearth (TF), Gallbladder (VB), Liver (F) and finally Kidneys (R).

We will see how important this sequence is in therapy, and when we study, by analogy, the genesis of our solar system.

The 11 organs and viscera are the supports, the points of support, of the five internal functions of the organism, linked to the seasonal cycle of the four seasons plus one, spring, summer, heat wave, autumn, winter. winter⁷⁸, and the general system of the "5 Elements of the Earth".

However, the organs and viscera have superficial antennas, the 12 main meridians,

⁷⁷ See chap. 34: *Cosmic architecture, solar system and galaxy*.

⁷⁸ See chap. 15: *Periodicities and Regulation*.

THE MORE BALD DIAMOND

Jing Mai, responsible for giving them information on the atmospheric variations of the surrounding environment, defending the body and eliminating “energetic” waste.

Generation and structuring of the 12

meridians (Pl. 19, fig. 4)

These 12 meridians are also subject to the rules of generation, and their definitive structuring will, as for the organs and the viscera, take place according to a very precise order.

The Heart meridian (Cr) appears first, in the north, Yin meridian coming from the center, **T2**, through **G"**, *Du Mai*; it is followed immediately, clockwise, direction of generation, by the meridian of the Small Intestine (GI) and that of the Bladder (V), Yang meridians, coming from **G"**, *Du Mai*, and **C"**, *Yang Qiao Mai*.

From **C"**, *Yang Qiao Mai*, to **C'**, *Ren Mai*, from the Bladder meridian to the Lungs meridian (P), we pass from a Yang meridian to a Yin meridian, with inversion of polarity. The Lungs meridian (P) cannot therefore follow directly, and one must pass through the center of a fictitious circumference to end up at a point diametrically opposed to the Bladder, since there are 12 meridians. As one comes from the center of the circumference, it is impossible to go back there to mark the inversion of polarity from Lungs, Yin meridian, to Large Intestine (GI), Yang meridian, coming from G: the Large Intestine follows lungs.

After the Large Intestine (GI), Yang meridian, reversal of polarity to go to Kidneys (R), Yin meridian,

THE MORE BALD DIAMOND

generated by **G'**, *Yin Qiao Mai*, therefore passing through the center of the circumference. The Kidneys are followed by the Master of the Heart and Sexuality (MC), Yin meridian also, generated by **A'**, *Yin Wei Mai*.

After the Master of the Heart, Yin meridian, inversion of polarity, and therefore passing through the center of the circumference, to go to Stomach (E), Yang meridian, generated by C, followed by Spleen (Rt), Yin meridian, generated by **T'**, *Chong Mai*. One cannot after Stomach, meal ser by the center, since one comes from there.

After the Spleen (Rt), Yin meridian, inversion and passage through the center of the circumference, to find the Triple Heater (TR), Yang meridian, generated by **T''**, *Yang Wei Mai*, then Gall Bladder (VB), meridian Yang, generated by **A''**, *Dai Mai*, and finally the Liver (F), Yin meridian, generated by **A2** and which comes to the surface, through the intermediary of *Dai Mai A''*.

An apparent circulation of energies is thus manifested, according to the circumference, fictitious it seems, which connects the meridians, in the order: Heart (Cr), Small Intestine (GI), Bladder (V), Kidneys (R), Heart Master (MC), Triple Heater (TR), Gall Bladder (VB), Liver (F), Lungs (P), Large Intestine (GI), Stomach (E), Spleen (Rt). Here again, proceeding by analogy, for the genesis of our galaxy, we will see how much this sequence, well known in Chinese energetics, is rich in lessons⁷⁹.

These 12 main meridians are the supports of the 6 external functions of the "6 Qualities of Heaven" of gold

⁷⁹ See chap. 34: *Cosmic architecture, solar system and galaxy*.

THE MORE BALD DIAMOND

organism, and are linked, as such, to the circadian cycle, a 24-hour cycle, on which the biological rhythms of our metabolism depend in part, the seasonal cycle in relation to the organs and viscera being the other major cycle in which we will be submitted.

Of the 12 meridians, four come from the four fundamental energies of the three Hearths. The eight other principal meridians coming directly from the eight marvelous vessels, being generated directly by them, are in some way the superficial antennae. Each of these eight main meridians therefore carries with it a direct thread linking it to the marvelous vessel which generated it. This is how a point of command, a point Master of a marvelous vessel, happens to be the apparent termination of this conducting thread on each of the eight corresponding meridians, thus confirming the data of the tradition:

- Small Intestine, generated by the *Du Mai* (**G''**) has its master point -IG 3
- Bladder, generated by the *Yang Qiao Mai* (**C''**) carries its master point -V 62
- Lungs, generated by *Ren Mai* (**C'**) carries its master point -P 7
- Kidneys, generated by the *Yin Qiao Mai* (**G'**) carries its master point -R 6
- Master of the Heart, generated by the *Yin Wei Mai* (**A'**) wears her master point-MC 6
- Rate, generated by the *Chong Mai* (**T'**) carries its master point -Rt 4
- Triple Heater, generated by the *Yang Wei Mai* (**T''**) carries its master point -TR 5

THE MORE BALD DIAMOND

- Gallbladder, generated by the *Dai Mai* (A") carries its master stitch -VB 41

But the 12 main meridians are first of all, it should be remembered, the peripheral antennas of the 12 functions attached to the 11 organs and viscera and of the five internal functions, blood, nervous, respiratory, bone, locomotor.

We have just seen a first demonstration of the generation of the organs and meridians of acupuncture. In fact, it was only after many years that its great simplicity became apparent to me. Indeed, when I undertook this research, it was another demonstration that allowed me to discover the cycle of generation, but, given its complexity, I preferred to restore it only now.

This demonstration calls upon all the traditional data, cosmological, alchemical, mathematical, and I admit that it never ceases to amaze me by its rigor at the same time as by the richness of its symbols.

For those who hate both mathematical and energetic demonstrations, Chapter 12 awaits them... as well as many others, as they wish!

Second approach to the "generation", according to the He Tu

From what we have discovered so far, the following points emerge:

1. There is a basic orientation according to the cycle:

THE MORE BALD DIAMOND

North
East
South
West
Center

2. The successive polarizations determine a cipher:

North	-T-1		corresponding to the Water element
South	- A - 2		corresponding to the Fire element
East	-C-3		corresponding to the Wood element
West-G-4			corresponding to the Metal element
Center - a - 5			corresponding to the Earth element

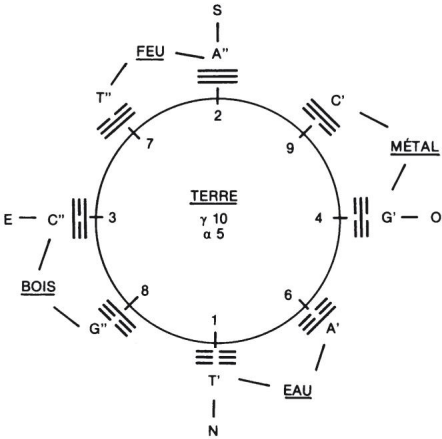

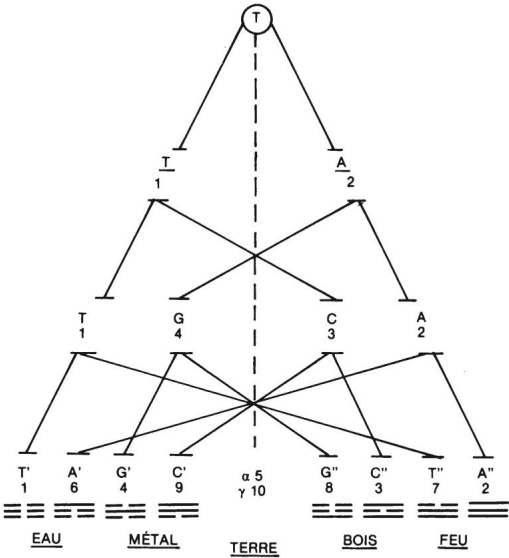

3. The encryption continues according to the progression of the polarizations: (PI. 20 fig. 1 and 2)

T'-North	– 1	water generation	in quadrant T
A'-Northwest – 6		water production	
A''-South	– 2	generation of fire	in quadrant A
T''-South-East	– 7	production of fire	
It is	– 3	wood generation	in quadrant C
G''-Northeast	– 8	wood production	
G'-West	– 4	generation of Metal	in quadrant G
C'-South-West	– 9	production of Metal	
a-Center	– 5	earth generation	In the center*
g - Center	– 10	Earth production	

* The terms “generation” and “production” are those traditionally attached to this set (see on this subject, Mitchi Mesa Nishi zawa, *General Treatise on Chinese Medicine*).

THE MORE BALD DIAMOND

POLARISATIONS ET CHIFFRAGE

Board 20

THE MORE BALD DIAMOND

4. It can be deduced from the above that in the encryption that we have just defined, from 1 to 10:

Before 1, there is O, therefore "great center", **T**,

After 4 and before 6, there is center 5,

After 9, there is center 10,

After 10, there will therefore be a "great center" again, **A**.

The four radicals thus appear on the surface:

T = T2	– (great Yin center)
a 5 = C – Center	
g 10 = G – Center	
A =A2	– (large Yang center)

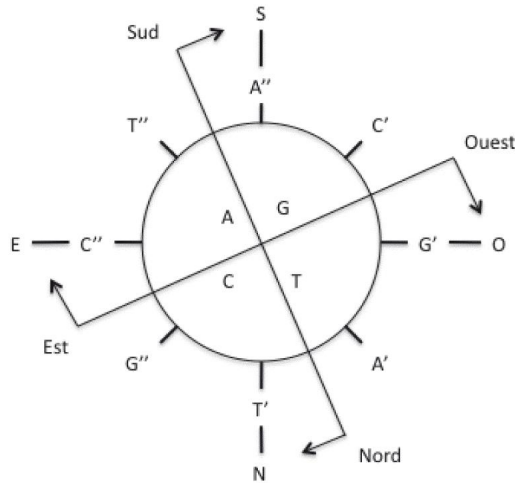

5. a) The way of the Earth, Yin, (structuring of the Yin), is dextrorotatory (trigonometric direction), and starts from the north, by the west⁸⁰.

The way of Heaven, Yang, (structuring of the Yangs), is senestrogyre (clockwise), and starts from the north by the east.

b) Moreover, we have seen that the direction of the generation is always senestrogryal (clockwise direction). Indeed, **T'** comes from T, **A''** comes from A, **C''** comes from C, **G'** comes from G, each in a direct way.

⁸⁰ For the Chinese, dextrorotatory means anticlockwise, and senestrogyre, clockwise: the movements of the right and left arms in *Tai Qi* define these two circular aspects.

THE MORE BALD DIAMOND

The four cardinal points therefore shift in the same antirotatory direction, as the polarizations, and therefore the generation progresses:

- the North shifts to the East
- the South shifts to the West
- East shifts to South
- West shifts to North.

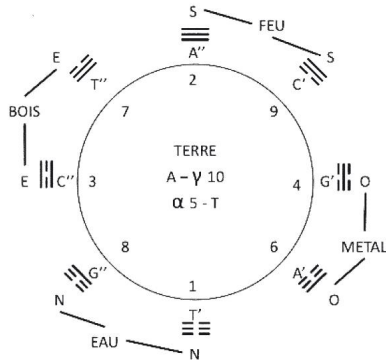

6. In the generation from the *He Tu* (8 polarized radicals/trigrams), the “great centre” **T** is before 1, **T'**, Water.

- The Water Element will therefore shift one notch (45°) towards the east, in order to reveal T, great center, and **G''** will be Water⁸¹.
- This shift will lead to that of the 4 cardinal points and their Water-Wood-Fire-Metal coding.

⁸¹ The inversion of polarity from **T** to **G''** is obligatory: **T** being the extreme Yin, can only lead to a Yang and not to another Yin.

THE MORE BALD DIAMOND

- The numbers alone remain in place as well as the corresponding polarized radicals:

He Tu: generation

1. Definitions

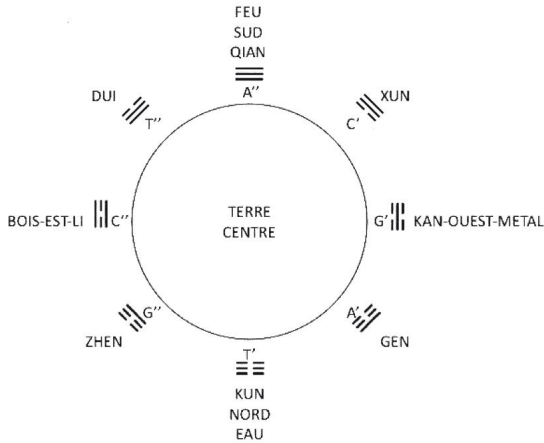

The layout of the trigrams according to Emperor Fu Xi, the *He Tu*, is oriented with respect to the four cardinal points with, to the north, Yin, Kun and to the south, Yang, Qian; ~~naturally~~, Yang, is in the east ~~and~~ Kan, , Yin, is in the ~~west~~.

We have thus defined the four cardinal points and a center, a sequence that we have named according to the 5 Chinese Elements:

North	Water
South	Fire
East	Drink
West	Metal
Center	Earth

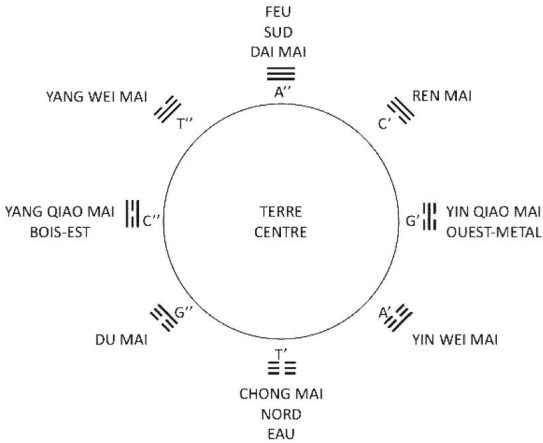

THE MORE BALD DIAMOND

At this point we will recall the relationship of each of the eight polarized radicals and the 8 trigrams (*Ba Gua*) with the marvelous vessels and their master points:

T'kun Earth _			<i>Chong Mai</i>	Spleen 4
HAS'	Gen Mountain	Yin Wei	<i>Mai</i>	Master of Heart 6
G' Kan	Water		<i>Yin Qiao Mai</i>	Kidney 6
C' Xun	Wind		<i>Ren Mai</i>	Lung 7
G" Zhen	May	Lightning		Small Intestine 3
VS"	Li	Fire	<i>Yang Qiao May</i>	Bladder 62
T" Dui	Marais		<i>Yang Wei Mai</i>	Triple Heater 5
TO"	Qian Sky		<i>Dai May</i>	Gallbladder 41

THE MORE BALD DIAMOND

Thus are defined the Yin-Yang oppositions of the polarized radicals, or marvelous diametrically opposed vessels:

<i>From May</i>	<i>G'' opposed to Ren Mai</i>	<i>VS'</i>
<i>Yang Qiao Mai C''</i>	<i>versus Yin Qiao Mai G'</i>	
<i>Yang Wei Mai T''</i>	<i>versus Yin Wei Mai A'</i>	
<i>Dai May</i>	<i>A'' opposed to Chong Mai</i>	<i>You</i>

Thus are also defined the couplings of the radi polarized cals or marvelous neighboring vessels⁸² :

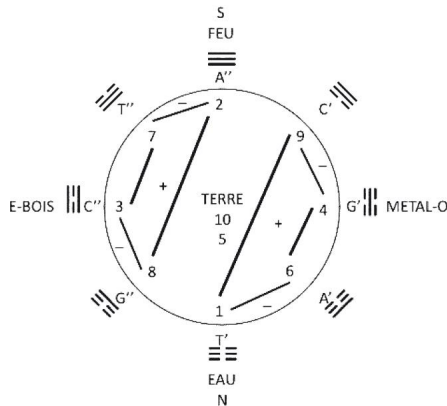

"Dad "	<i>Chong Mai</i>	<i>You</i>	<i>in quadrant T</i>
"Mother "	<i>Yin Wei Mai</i>	<i>HAS'</i>	
" Guest "	<i>Yin Qiao Mai</i>	<i>G'</i>	<i>in quadrant G</i>
"Host "	<i>Ren May</i>	<i>VS'</i>	
"Husband "	<i>From May</i>	<i>G''</i>	<i>in quadrant C</i>
"Women "	<i>Yang Qiao Mai C''</i>		
"Daughter "	<i>Yang Wei Mai</i>	<i>You''</i>	<i>in quadrant A</i>
"Son "	<i>Dai May</i>	<i>HAS''</i>	

⁸² Yang Ji Zhou – *Zhen Jiu Da Cheng* : book V, statement 107.

THE MORE BALD DIAMOND

2. Costing

North-South-East-West-Center, or Water-Fire-Wood Metal-Earth, 1, 2, 3, 4, 5 / 6, 7, 8, 9, 10; it is, as we have seen, the ciphering key based on successive polarizations.

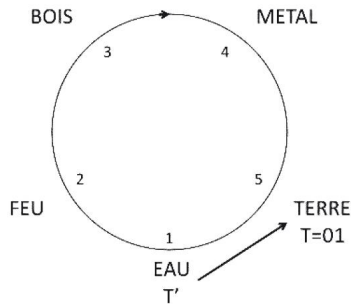

Note in passing that this ciphering defines a magic square with base 5, in the direction of the circumference and with base 10 in transverse ($9-4 = 5 \dots 7+3 = 10 \dots$).

3. Reading

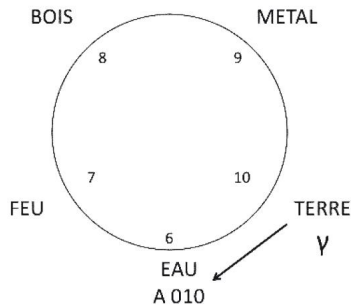

has. We have seen that before **T', 1**, there is “grand centre” and after **g, 10**, there is “grand centre”.

T', 1, center of generation of Water, according to the large ciphering cycle, is obligatorily “generation of the Earth”.

The "great centre" before **T**, 1, can therefore be denoted 01, and we will call it T, and **T, 01**, is "generation of the Earth".

g, 10, is "production of the Earth", therefore the great center which follows, according to the ciphering cycle, is necessarily "production of Water".

The "great centre" after **g, 10**, can therefore be denoted 010, and we will call it A, and **A, 010**, is "production of Water".

We then obtain:

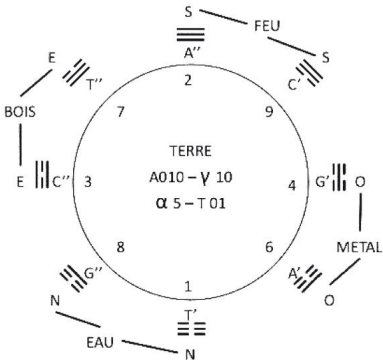

THE MORE BALD DIAMOND

T	01	earth generation
You	1	water generation
A" 2		fire generation
C" 3		wood generation
G'4		metal generation
at 5		earth generation
HAS'	6	water production
T" 7		fire production
G" 8		wood production
VS'	9	metal production
g	10	earth production
A 010	Water	production

As we have seen above, the 4 radicals **TACG** thus appear on the surface:

T	01 is none other than T2 and can only generate the Heart
A 010	is none other than A2 and can only generate the Liver
has	5 is none other than C and can only generate the Stomach
g	10 is none other than G and can only generate the Large Intestine

b) Let's go back to our *He Tu diagram*:

THE MORE BALD DIAMOND

The generation begins in the north and takes place in the antirotatory direction. We have also seen that the axes of the cardinal points are offset in the sinestrogylal direction:

G" 8 becomes Water	You	1	the remains
T" 7 becomes Wood	VS"	3	the remains
VS'	9 becomes Fire	At" 2	the remains
HAS'	6 becomes Metal G' 4 remains		

We only have to read in the senestro gyre direction and taking into account the numerical indications⁸³ :

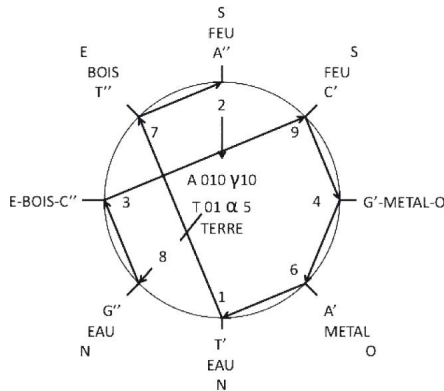

The great center T, 01, Yin generates:

Water G"		8	Yang who engenders
Drink	VS"	3	Yang who engenders
Fire, but what Fire A"2 or C'9? Mandatory C'9, since there is passage through the center of the circumference, therefore polarity inversion from Yang to Yin:			
	VS'	9	Yin which generates (we are at 9, therefore 10, with inversion of polarity)
Earth g		10	Yang who engenders (reversal of polarity)
Metal G' 4			Yin which generates (we are at 4, therefore 5; but we cannot go back through the center since we come from there)
Metal A'		6	Yin that engenders (inversion of polarity)
Earth has		5	Yang which engenders (inversion of polarity)
Water T'		1	Yin that engenders (inversion of polarity)
Drink you		7	Yang who engenders
Fire	HAS'	2	Yang which engenders:

⁸³ See diagram on next page.

THE MORE BALD DIAMOND

The great center A 010, Yin (the “great center”, in depth, is Yin).

Additional remarks:

- The generation cycle is therefore: Water-Wood-Fire-Earth Metal because when you reach 9, Fire, C', you have to go center 10, through the before arriving at Metal.
- g , • Arrived at Metal, 4, G', new passage to the center at 5, but this is impossible, because it would be a step back, hence the generation of new Metal 6, A', which, , can give rise to Water 1, T'.
- But to arrive at 1, the passage to the center is necessary (there is 0 before 1) and it is Earth 5, a , which ~~cannot reach~~ after Metal 4, G', which serves as a link with Water 1, T'.

In the new structuring of the energy system, the 12 components which have just been thus generated from the *He Tu* and through the intermediary of the 5 Elements, Water, Wood, Fire, Earth, Metal, will be defined according to the use they make of the energies coming from the three Heaters and the three Hearths. At the level of human or animal physiology

THE MORE BALD DIAMOND

we will have the correspondences defined during the first demonstration, each of these twelve components being found analogically in each of the 12 acupuncture meridians of the same name. Eight of them support the Master points of the corresponding wonderful ships.

Cr-IG - **V - P** - GI- **R - MC** - E - **Rt - TR - VB** - F. These 12 meridians will have an external function of relationship with the ambient environment.

We can therefore establish and confirm the following relations:

T		01		generates Cr	yin	
	G"	8 of May		generates IG	Yang	GI 3
	VS"	3 Yang Qiao Mai generates	V generates	Yang V 62		
	VS'	9 Ren Mai	P	yin		P7
G		g 10		generates GI	Yang	
	G'	4 Yin Qiao Mai generates	R	yin		R 6
	HAS'	6 Yin Wei Mai	generates MC Yin			MC 6
VS		at 5		generates E	Yang	
	You	1 Chong Mai generates	Rt	yin		Rt 4
	You"	7 Yang Wei Mai generates	TR generates	Yang TR 5		
	HAS"	2 Dai Mai	VB generates	Yang VB 41		
HAS		010		F	yin	

IG meridian which comes from **G"** Du Mai supports its master point: GI 3

V meridian which comes from **C"** Yang Qiao Mai supports its master point: V 62

P meridian which comes from **C'** Ren Mai supports its master point: P 7

THE MORE BALD DIAMOND

R meridian which comes from **G'** *Yin Qiao Mai* supports its master point: R 6

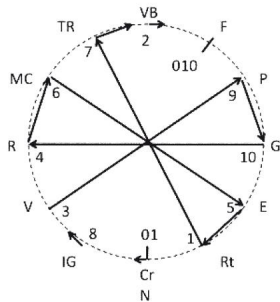

MC meridian which comes from **A'** *Yin Wei Mai* supports its master point: MC 6

Rt meridian which comes from **T'** *Chong Mai* supports its master point: Rt 4

TR meridian which comes from **T''** *Yang Wei Mai* supports its master point: TR 5

VB meridian which comes from **A''** *Dai Mai* supports its master point: VB 41

c) The positioning of the meridians on a circumference according to the generation is carried out in the senestrogyl direction. Starting from Cr, **T 01**, which appears in the north, we have, in the sinestrogyl direction, IG, **G''8**, then V, **C''3**.

Passing from V, **C''3**, to P, **C'9**, we pass from the level of Yang to that of Yin with inversion of polarity.

P can therefore only be diametrically opposed to V.

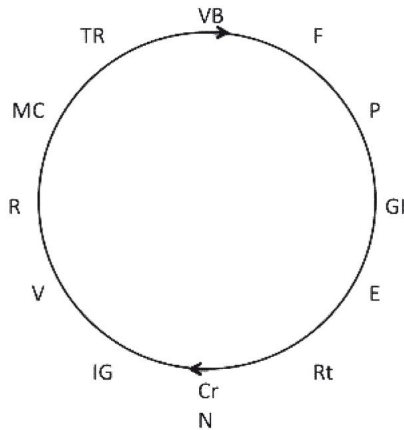

The generation (circulation of energy), taking place in the senestrorotatory direction, GI, **G g 10**, Earth, follows P, but passing through the center, therefore R, **G'4**, is diametrically opposed to it.

THE MORE BALD DIAMOND

After MC, **A'6**, passage through the center, Earth, diametrically opposite (inversion of polarity from Yin to Yang) E, **C a 5**, then Rt, **T'1**.

Then a new passage from Yin to Yang, so TR, **T''7**, is diametrically opposed. Finally VB, **A''2**, then F, **A010**, which comes to the surface.

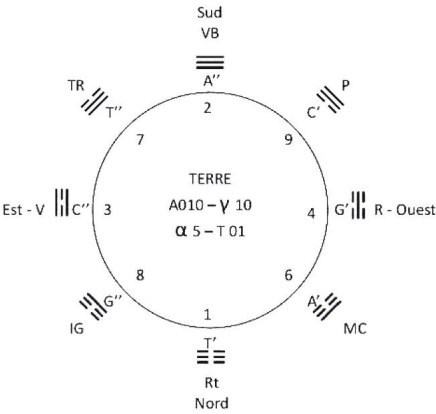

A new circulation of energy then appears, a circular cycle of the “great circulation” of the meridians as it was previously defined (Pl. 19 fig. 4).

In parallel, simultaneously with the generation of the meridians, another generation took place, that of the 5 Elements/organs:

THE MORE BALD DIAMOND

Laws of generation of the Elements

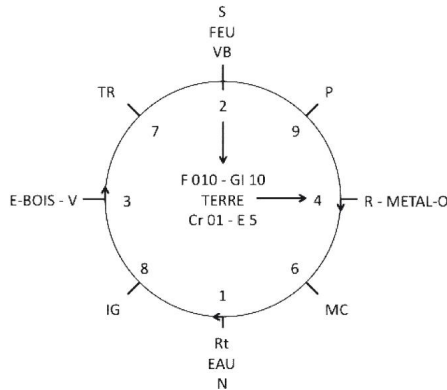

We remember that the meaning of the numbers from 01 to 010 is as follows:

T Cr 01		= generation of the Earth, i.e. gives birth to the Earth
T'Rt 1		= generation of Water, i.e. gives birth to Water
A" VB 2		= generation of Fire, i.e. gives birth to Fire
C" V 3		= generation of the Wood, that is to say gives birth to Drink
G'R 4		= generation of Metal, i.e. gives birth to Metal
aE	5	= generation of the Earth, i.e. gives birth to the Earth
A' MC 6		= production of Water, is produced by Water
T" TR 7		= production of Fire, is produced by Fire
G" GI 8		= production of Wood, is produced by Wood
C'P	9	= production of Metal, is produced by Metal
g GI 10 =		production of the Earth, is produced by the Earth
AF	010 =	Water production, is produced by Water

THE MORE BALD DIAMOND

Taking into account the generation cycle, Water, Wood, Fire, Earth, Metal, senestrogyre, we obtain the following diagram⁸⁴ :

All that remains is to read the numerical indications:

- Yin-Cr (01) generates the Earth, therefore Cr = Fire Yin (Fire precedes Earth in the cycle, therefore generates it by yielding its energy to it)
- Yin-Rt (1) generates Water, so Rt = Earth Yin (after 6 and before 1, there is center and center = Earth)
- Yang-VB (2) generates Fire, so VB = Yang Wood
- Yang-V (3) generates Wood, so V = Water Yang
- Yin-R (4) generates Metal, therefore R = Water Yin (attempt to go back after R 4, therefore inversion of the system)
- Yang-E (5) generates Earth so E = Yang Earth. The senestrorotatory cycle would like E to be Fire, but it is GI 10 which is previously generated by Fire P, 9; E is the accomplishment of the center Earth which could not come to fruition after R 4; it is therefore indeed Earth: in this case, it is the Earth which generates the Earth.

⁸⁴ See chap. 15: *Periodicities and Regulation*.

THE MORE BALD DIAMOND

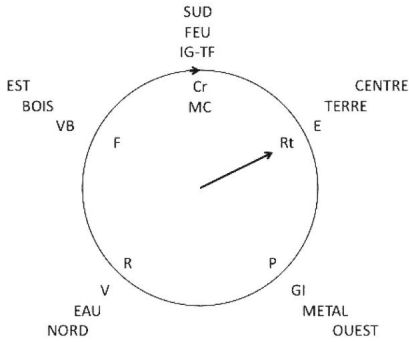

- Yin MC (6) is produced by Water, therefore MC = Impossibility. Indeed, the senestogyre cycle would like MC to be Wood, but MC is 6, and therefore before 6, and after Water (MC is produced by Water) there is passage to the center as before 1. MC should therefore be Earth, Center, but the return to the “center” (between 4 and 6) is impossible. MC cannot therefore be structured as an organ belonging to the 5 Elements⁸⁵.
- Yang TR (7) is produced by Fire, so TR = 2nd Yang Fire. The senestogyre cycle of the Yang would like TR to be center, Earth, but it is an impossibility, because E 5, which generates , the Earth is Earth. Only the large center, central fire, can accommodate its TR product as a 2nd Yang Fire, or Earth Fire.
- Yang GI (8) is produced by Wood, therefore IG = Fire Yang.
- Yin P (9) is produced by Metal, so P = Metal Yin.
We have indeed seen that Metal 4 generates Metal 6.
- Yang GI (10) is produced by the Earth, so GI = Metal Yang.
- Yin F (010) is produced by Water, so F = Wood Yin.

According to the generation cycle, Water, Wood, Fire, Earth, Metal, and the basic orientation that has already served us,

- the **Fire** will be in the south – noon/summer: Cr, IG, TR, (MC)
- the **Wood** will be in the east – dawn/spring: F, VB
- **Water** will be in the north – midnight/winter: R, V
- **Metal will** be in the west – dusk/autumn: P, GI
- the center **Earth** , will appear between south and west, between Fire and Metal: Rt, E.

⁸⁵ See chap. 13: *Yi King, generation of the 5 Elements of the Earth, 11 components.*

THE MORE BALD DIAMOND

We have thus defined the internal function, 5 Elements; therefore TR (triple Heater) corresponds to the central assimilation function TF (triple Hearth) and must therefore be designated at this level by this last reference. Finally, it should be noted that if the cycle of generation begins “through” the Water Element, it only really manifests itself from Wood (G"). The generation cycle is therefore Wood-Fire-Earth-Metal-Water.

In Chinese cosmogony, the generation of *Tian Gan*, the 10 "Heavenly Stems" (or energies of the Earth) is the same, taking into account the following correspondences:

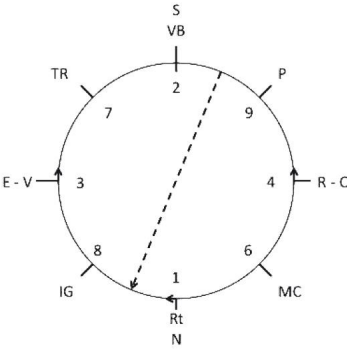

Drink	<i>yia</i>	Yang	VB
	<i>yi</i>	yin	F
Fire	<i>Bing</i>	Yang	GI
	<i>Ding</i>	yin	CR
Earth	<i>Wu</i>	Yang	TF (E is central)
	<i>Ji</i>	yin	Rt
Metal	<i>geng</i>	Yang	IM
	<i>xin</i>	yin	P
Water	<i>ren</i>	Yang	V
	<i>Mistletoe</i>	yin	R

THE MORE BALD DIAMOND

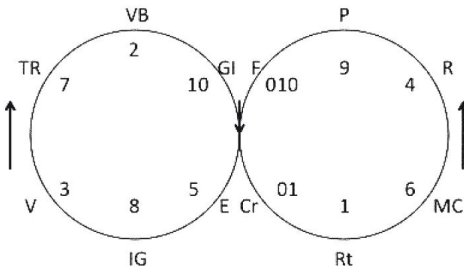

4. Couplings or "great meridians"

We have seen that the way of Heaven, Yang, is senestrogyre and the way of the Earth, Yin, dextrogyre.

Let's go back to our diagram of the *He Tu* but by separating the way of Earth from the way of Heaven:

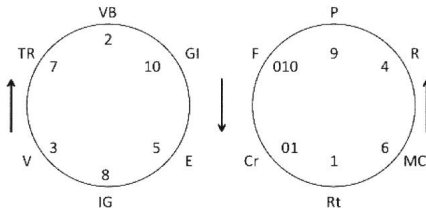

In the Yin, the great center, Cr(01) precedes Rt(1) then we find in the dextrogyre direction (path of the Earth and Yin) MC-RP and there, return to the great center F; then, inversion to pass at the level of the Yang, with center E, then IG-V-TR-VB and finally return to the center GI, this in the senestrogyral direction (way of Heaven and Yang):

THE MORE BALD DIAMOND

Or :

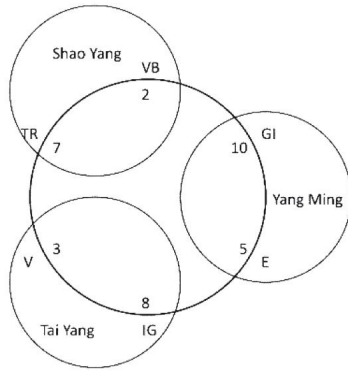

This is the sequence of the Yin meridians and that of the Yang meridians, of course in opposite directions to each other.

At the Yin level,	Cr is a distributor
	F is receptacle
At the Yang level, E is	assimilation
	GI is elimination

Each of these two systems of six meridians will be structured into three pairs, i.e. six “large meridians”.

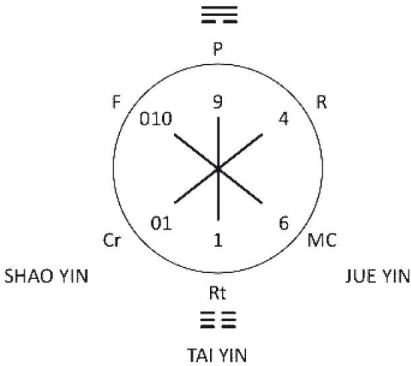

In the Yang system, Small Intestine and Bladder beginning of the cycle of generation (after Cr) with shifted north/south axis, naturally go together, in correspondence with the couplings of the marvelous vessels of which they support the master points. Triple Heater and Gallbladder, end of the same cycle (before Liver), also go together under the same conditions. Finally, Large Intestine and Stomach, centers, are also related to each other.

THE MORE BALD DIAMOND

IG-V	= <i>Tai-yang</i>	– Supreme Yang
TR-VB	= <i>Shao Yang</i> – Middle Yang	
GI-E	= <i>Yang Ming</i>	– Shining Yang, lower

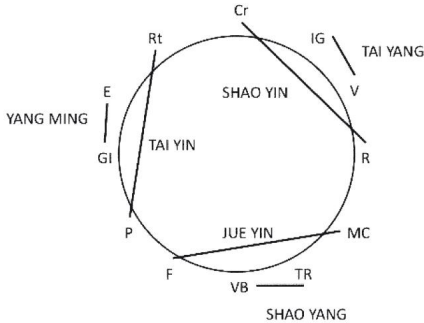

In the Yin system, diametrically opposed, Spleen (Rt) and Lungs (P) come together: Rt, coming from *Kun* with *E*, coming from *Xun*, extreme Yin zone. Naturally Kidney will be coupled with its opposite Heart, and Liver with its opposite Master of the Heart.

THE MORE BALD DIAMOND

Rt-P = <i>Tai Yin</i>	– Supreme Yin
R-Cr = <i>Shao Yin</i> – Middle Yin	
F-MC = <i>Jue Yin</i>	– End of Yin or dying Yin

Let us now apply these couplings to all the meridians, the north-south axis being defined by the Heart, Fire, in the south, as we have seen in the generation of the 5 Elements.

The Yang are external, the Yin internal.

These are the “6 Qualities of Heaven”, the six great meridians:

<i>Tai Yang</i>	= Cold
<i>Shao Yin</i>	= Fire that radiates (heat)
<i>Shao Yang</i>	= Burning heat -Depression
<i>Jue Yin</i>	= Feng -Wind-Atmospheric pressure
<i>Yang Ming</i>	= Drought
<i>Tai Yin</i>	= Humidity

In Chinese cosmogony, the same system of generation and coupling can be applied to *Di Zhi*, the 12 "Terrestrial Branches" (or energies of Heaven), if we take into account the following correspondences:

THE MORE BALD DIAMOND

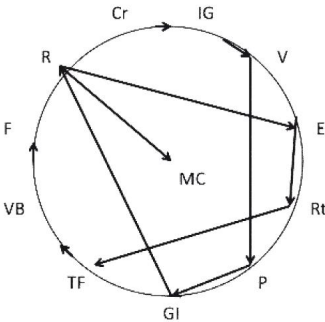

– Wu Cr Yin – Zi			VB Yang
– Wei IG Yang – Chou F			yin
– Shen V Yang – Yin			P yin
– Yu – R Yin – Mao GI Yang			
– Xu MC Yin – Chen E			Yang
– Hai TR Yang – Si			Rt Yin

Or :

– Tai Yang	IG Wei	– Jue Yin	CM	Xu
	V Shen		F	Cabbage
–Shao Yin	Cr Wu	– Yang Ming	IM	Mao
	R Yu		E	Chen
–Shao Yang	VB Zi	– Tai Yin	P	yin
	TR Hai		Rt	Yes

5. Structuring of the 11 components of the 5 Elements

The positioning of the 11 components of the 5 Elements on a circumference will be carried out in the senestrogyral direction, according to their generation from the *He Tu*:

THE MORE BALD DIAMOND

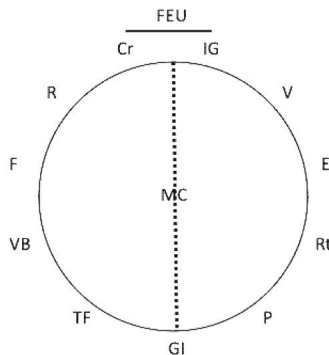

- Starting from the south, Fire, Cr-IG, we have successively in the sinister direction, Cr-IG-V.
- After V, passing through the interior of the circumference, to go from V to P and GI; as there are only 11 components, P cannot be diametrically opposed.
- After GI, passage through the interior of the circumference, to go to R; GI is "center" and one comes to the periphery.
- After R, as MC is diffuse "impossible" as a structured organ, new passage through the interior of the circumference, to go to E (center) and Rt.
- After Rt, last pass through the inside of the circumference ence to go to TF, VB and F.

We have thus discovered the sequence of components of the 5 Elements on this new circumference, in the sinestrogryal direction:

Cr-IG-VE-Rt-P-GI-TF-VB-FR

A number of remarks are in order:

— GI is on an axis passing through the center of the circumference and between Cr and IG: the first center to appear after the "great center" Cr, GI is therefore in opposition to the Fire element whose components are Cr and GI:

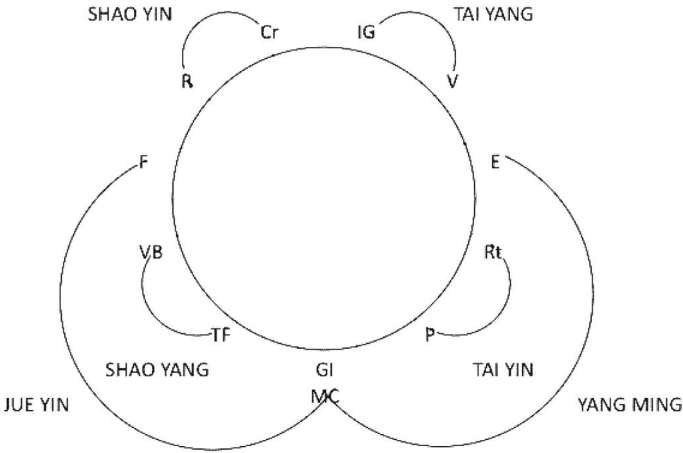

Fire:	as 2nd Fire
Earth:	it is "production of Fire"
Water:	in the generation cycle of the 5 Elements, it is in place of the Water Element, between Metal and Wood.

233

THE MORE BALD DIAMOND

precise and symmetrical organization of these 6 Qualities, complementary two by two. Indeed, we remember that the MC component (6) (impossibility, unstructured organ at the level of the 5 Elements) appeared after R (4) as a replacement for the GI center (10) where we could not return (return impossible). By placing MC close to GI, we then have the following arrangement:

The complementary pairs are:

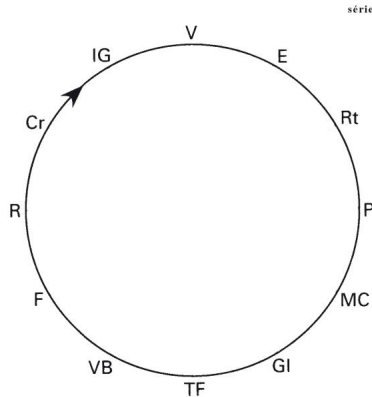

– Shao Yin (R-Cr) – Tai Yang	(IG-V)	Fire-Cold
– Tai Yin	(Rt-P) – Yang Ming (E-GI)	Humidity -Drought
– Jue Yin (MC-F) – Shao Yang (TR-VB) Pressure-Depression		

We have just seen that MC is naturally placed close to GI and this leads us to come back to the sequence of components of the 5 Elements discovered above. Indeed, if MC cannot be structured as an organ, the "Master of the Heart" function is

THE MORE BALD DIAMOND

undeniable and, on a practical level, we must therefore include it in the suite of components of the 5 Elements.

All of the above determines MC's position in this sequence:

Being following the kidneys, R, during generation and therefore in the positioning and structuring of the components of internal function, the Master of the Heart, MC, diffused throughout the organism, is therefore at the center.

However, coming close to Gi, it will naturally find its place between P and Gi. We shall find a resounding confirmation of this later.

We thus obtain the "great circulation" of the 12 internal functions, components of the 5 Elements, the application of which we will discover on the therapeutic level.

86 See chap. 34: *Cosmic architecture*.

THE MORE BALD DIAMOND

6. Synthesis

Thus, in the generation system according to the *He Tu*, we find :

A basic wayfinding system:

North	= Water
South	= Fire
East	= Wood
West	= Metal
Center = Earth	

A coding system:

Water	= 1-6
Fire	= 2-7
Drink	= 3-8
Metal	= 4-9
Earth	= 5-10

A dual reading system:

Earth-Yin	= dextrorotatory direction
Sky-Yang	= senestrogyral sense

A simple reading system, generation, in the senestrogyral direction, taking into account the values of figures for passages in the center, the north-south and east-west axes being shifted in the same direction by 45°.

Reading key: Water-Wood -Fire-Earth -Metal. It is the generation cycle, *Sheng cycle*.

A recoding system, a corollary of the reading system, since it is its practical application, taking into account Yin-Yang inversions.

THE MORE BALD DIAMOND

In his *General Treatise on Chinese Medicine*, Mitchi Mesa Nishizawa specifies that “the cause of the birth of the *Di Zhi* (the 12 Earthly Branches) is in the *He Tu*. The *Di Zhi* are inseparable from the *Tian Gan* (the 10 Celestial Stems) and are born simultaneously. The result of the *Di Zhi* is found in the *Lo Shu*. »

The first two affirmations have just been demonstrated, we will now discover the third, in the next chapter, with the study of the trigrams organized according to the *Lo Shu* of King Wen.

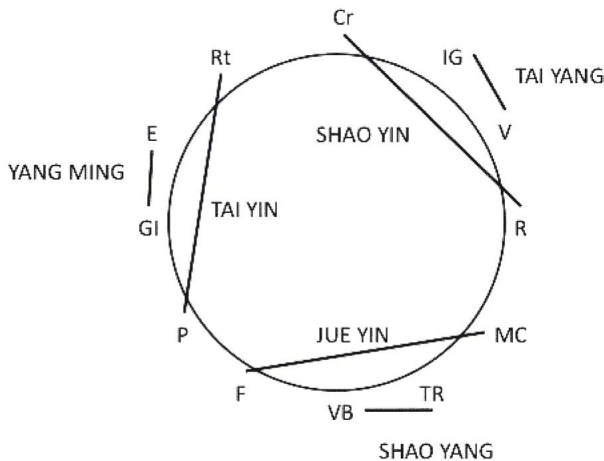

He Tu, according to Emperor Fu Xi,
Marvelous Ships and Master Points

11. Lo Shu: End of the Six Qualities of Heaven and the Five Elements of Earth

Because of its generation, pushed by the transcendent, vital energy which flows into it, the energy system which has just been born tends to generate a new energy system; he therefore specifies the energies which are going to be formed in three Heaters and three Hearths to digest the energies which he yields to them and to work out those which their own system will be able to use. This transfer of energy from the generating system to the generated system and the victory of the second over the first are defined by the *Lo Shu*⁸⁷, arrangement of the eight trigrams according to King Wen.

We know the 12 meridians, or six great meridians:

⁸⁷ *Lo Shu*: Victory cycle.

THE MORE BALD DIAMOND

Orientation axes from which the victory cycle takes place (diagram next page)

The kidneys, R, source of life energy, in relation to ancestral energy, belong to the Water element and are oriented to the north; the south, diametrically opposed, will correspond to the large intestine, GI, the east to the gall bladder, VB and the west to the heart, Cr.

As it is a question of the cycle of victory, of destruction, the reading of the cycle of great circulation of the meridians, reversed, will be dextrorotatory, anticlockwise: the value of the axes will therefore be,

North: Water-West: Wood -South: Fire-East: Metal.

However, GI and E as well as Cr and F, since the origin of *He Tu*, come from the center. They therefore have an Earth value and as a result, the southern axis, Fire value, will be slightly "curved" towards spleen Rt, the western axis, Wood value, will be oriented towards the small intestine IG, and the eastern axis, Metal value, will move towards lungs P.

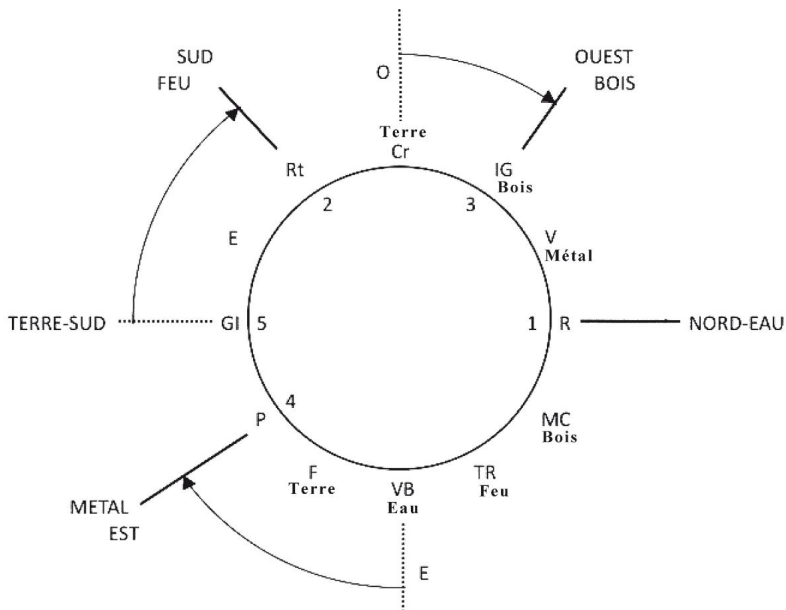

Cr and F, great Earth centers corresponded, in the *He Tu*, to the beginning and the end of the cycle of generation. Conversely, in *Lo Shu*, F and Cr will correspond to the start and end of the victory cycle. It will be the same for GI and E centers, Earth, which punctuated the middle of the cycle of generation.

From these great axes, we know the key to reading the cycle of victory, the *Ke cycle*: Water - Fire - Metal - Wood - Earth; of course to apply to the other meridians, in the dextrorotatory direction.

- From the Liver, F, Great Center, Earth, let us apply the *Ke cycle* :

THE MORE BALD DIAMOND

- VB takes a Water⁸⁸ value,
 - TR takes a Fire value (Earth wins over Water, which wins over Fire).
- Before the Heart, Cr, Great Center Earth, always taking into account the *Ke cycle*:
 - IG to the west retains its Wood value and
 - V takes on a Metal value (Metal wins over Wood which wins over Earth).
- MC, unstructured function, then takes obligato only a Wood value, the only one still available.

In connection with the above, we have seen that the southern axis which traditionally corresponds to Fire has

⁸⁸ We have seen with the *He Tu* that the energies take on a particular “element” value in relation to the orientations and the traditional ciphering.

THE MORE BALD DIAMOND

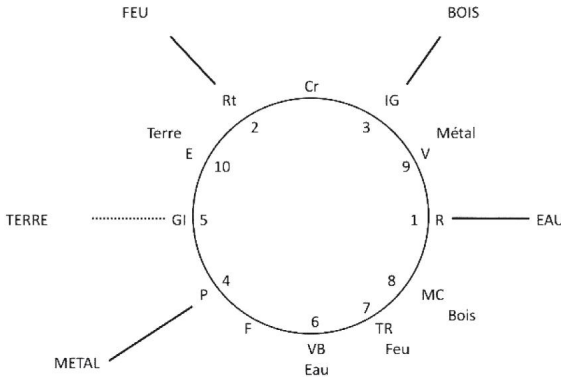

was slightly "curved" towards Rt; the west axis, value Wood, is oriented towards IG, and the east axis, value Metal, towards P.

Liver, F, and heart, Cr, are not taken into account for the ciphering that will follow, since they are "great center", Earth, and must, as we said above, determine the beginning and the end of the cycle.

Costing

Let us remember that the encryption law, discovered with the *He Tu*89, is as follows:

Water	1-6
Fire	2-7
Drink	3-8
Metal	4-9
Earth	5-10

89 See chap. 10: *He You*

THE MORE BALD DIAMOND

Let us apply this law, in the first place to the energies corresponding to the major axes that we have just defined, (R - Rt-IG- P -GI), then to the series which follows (VB - TR- MC -V- E), simply taking into account their “element” value; according to the encryption cycle, we then find:

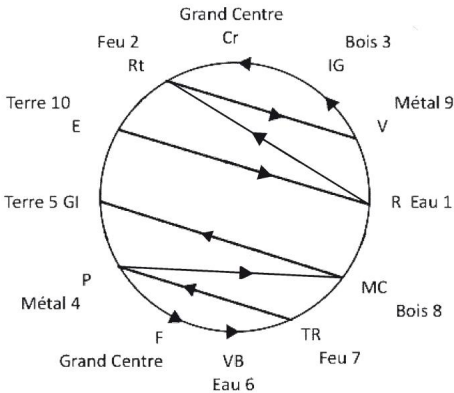

R Water	= 1	GB Water	= 6
Rt Fire	= 2	TR Fire	= 7
GI Wood	= 3	MC Wood	= 8
P Metal = 4	V Metal = 9		
GI Earth = 5	E	Earth = 10	

Reading

The decoding of our ciphering and its reading will be carried out according to the cycle of victory: Water-Fire-Metal Wood -Earth, from the system of great circulation of the meridians.

The generation cycle of the *He Tu* had ended with the liver, F, in the sinister-gyratory sense.

The *Lo Shu* victory cycle will therefore begin with the liver, F, in the dextrorotatory direction.

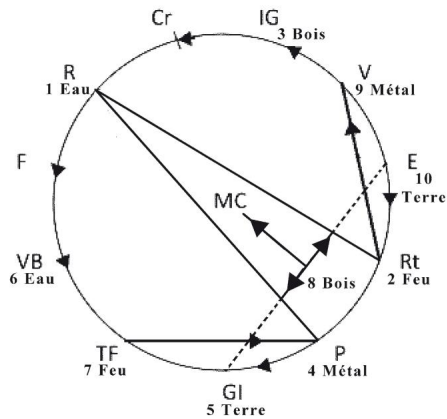

THE MORE BALD DIAMOND

In order, in relation to the elements and the corresponding figure:

F returns to the great center Earth and defeats		
GB 6	Water	who wins
TR 7	Fire	who defeats V 9 or P 4 (Metal); however a Yang couple can only result in a Yin; so TR 7 wins.
P4	Metal that wins	
MC 8	Drink	who wins
GI 5 followed by E 10 Earth , center, who wins		
R1	Water	who wins
Rt 2	Fire	who wins
V 9	Metal that wins	
GI 3	Drink	who wins
Cr which returns to the great center Earth .		

It is still the same cycle that we find from the system of great circulation of the 11 components + 1 of the 5 Elements:

THE MORE BALD DIAMOND

In order :

F returns to the great center Earth by defeating		
6	Water, VB	who wins
7	Fire, TF	who wins
4	Metal, P	who wins
8	Wood, unstructured MC,	diffused in the organism, which overcomes
5 and 10	Earth , GI-E	who wins
1	Water, R	who wins
2	Fire,	Rt who wins
9	Metal, V	who wins
3	Drink	IG who wins
Cr which returns to the great center Earth .		

Construction and layout of the Lo Shu

It is first necessary to remember the correspondences established in the *He Tu* between on the one hand the marvelous vessels and their master points, and on the other hand the 8 trigrams:

<i>Chong Mai</i>	(Rt 4)	= Kun T'		☷	
<i>Yin Wei Mai</i>	(MC 6) = Gen A'				☶
<i>Yin Qiao Mai</i>	(R6)	= Kan G'		☵	
<i>Ren May</i>	(P7)	= Xun C'			☴
<i>From May</i>	(GI 3)	= Zhen G''		☳	
<i>Yang Qiao Mai</i> (V 62) = Li			VS''		☲
<i>Yang Wei Mai</i> (TR 5) = Dui			You''	☱	
<i>Dai May</i>	(VB 41) = Qian A''				☰

THE MORE BALD DIAMOND

The **victory** cycle , Water-Fire-Metal-Wood-Earth, applied to the system of marvelous vessels and trigrams, is traditionally dextrorotatory, which gives us the following arrangement on an oriented circumference:

- The Water area will be to the north and northwest
- the Fire area will be to the west and southwest
- the Metal area will be to the south and southeast
- the Bois area will be to the east and northeast
- the **Earth** area will be in the center.

Depending on the element value and the costing specified above,

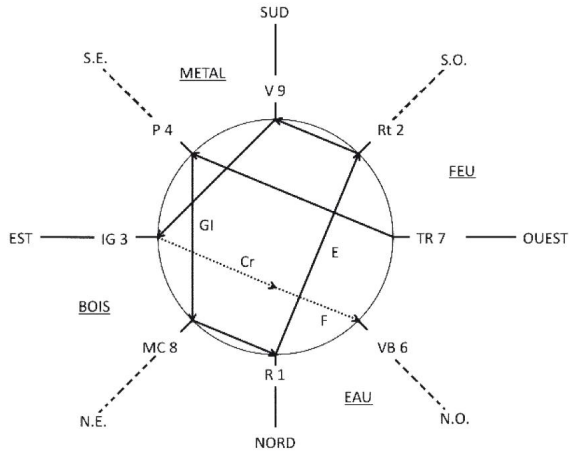

- R (1) and VB (6) will therefore be to the north, and to the northwest (Water)
- TR (7) and Rt (2) will be west and southwest (Fire)
- V (9) and P (4) will be south and southeast (Metal)
- IG (3) and MC (8) will be to the east and northeast (Wood)

Demonstration

Let us remember that the kidney, R (1), belonging to the Water element, will be located in the north, which determines the starting point for the construction of the cycle of victory; the following follows, reading the cycle of the 12 meridians:

- Water VB (6) will be in the northwest (Water zone) and will begin the installation of the *Lo Shu*, the liver, **F** having disappeared in the center.

THE MORE BALD DIAMOND

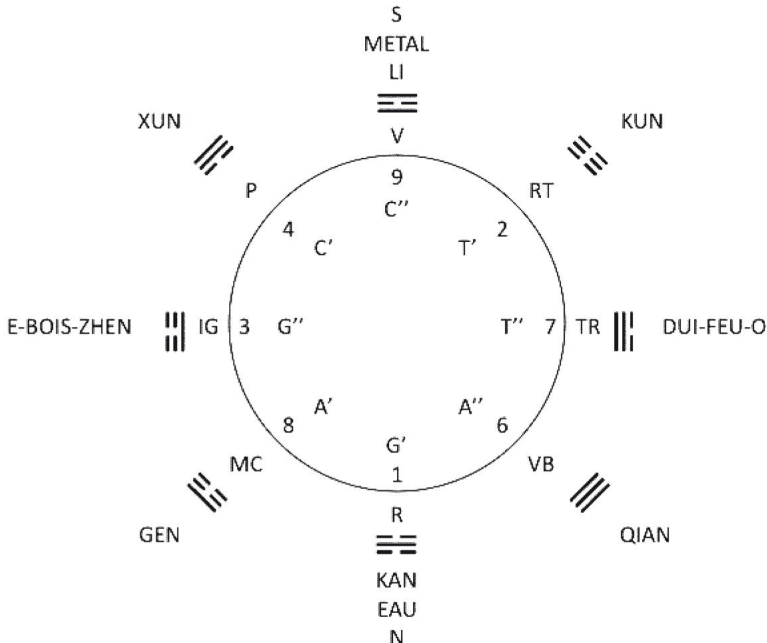

- Fire TR (7), after Water VB (6), without polarity inversion and therefore without passing through the center, will be to the west (Fire zone) in the dextrogyre direction of victory.
- Metal P (4): as we have an inversion of polarity, from Yang to Yin, with passage in the center, P (4) will be located in the south-east (Metal zone); for this, we will use the same passage angle of 135° as previously in the *He Tu*90, but this time, in the dextrogyre direction instead of the senestrogyre direction used then.
- After (4) P, we find (5), therefore the center, GI, but P, Metal is victorious over MC, Wood.
- Bois MC (8) is naturally placed in the northeast (Bois zone): as Bois, he cannot be elsewhere, the east being forbidden to him since he has passed through the center. MC Bois is then victorious over GI and E, Terre.
- The center GI (5) Earth, disappears but E (10) Earth, cannot disappear directly after MC and before R (1) of which it is victorious, since one comes from the center GI (5). We must therefore continue directly from MC (8) to R (1).

90 See chap. 10: *He Tu*, passage of 135° from V (3) to P (9).

THE MORE BALD DIAMOND

- Water R (1) settles in the north (Water zone) as we indicated above.
- The disappearance of the center E (10), with passage to the center and inversion of polarity, can now intervene, R (1) Water being victorious over Fire Rt (2).
- Fire Rt (2), after Water, R (1), then necessarily comes to the south-west (Fire zone), the only place available for Fire. Rt (2), Fire, is victorious over V (9) Metal.
- Metal V (9) must be located to the south (Metal zone), the only space available for Metal.
- Wood IG (3) necessarily comes to the east (Wood zone), only place available for Wood, after passing through the inside of the circumference (10) following V (9) Metal. The heart, **Cr** then disappears into the great center.

By noting the analogous trigrams, we obtain the *Lo Shu*, organization of the trigrams according to King Wen.

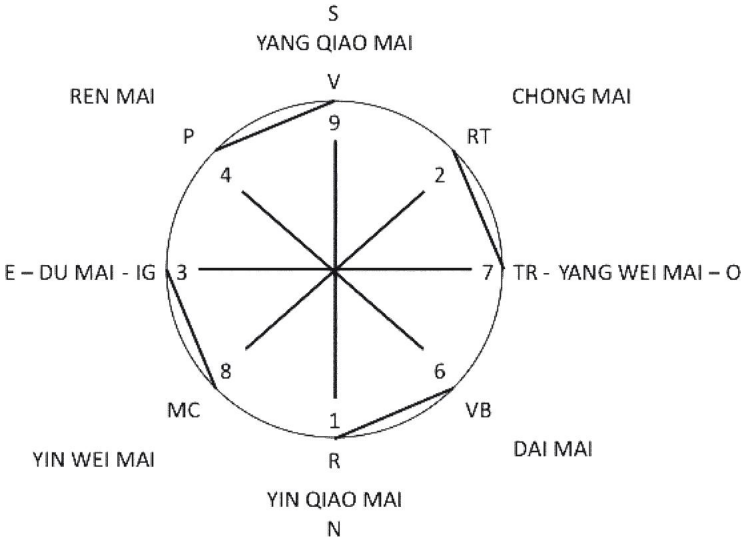

THE MORE BALD DIAMOND

In this one, the *Ke* victory cycle has been perfectly respected:

Earth – F		defeated Eau VB (6)	
Water	– VB (6)	defeated Fire TR (7)	
Fire	– TR (7)	defeated Metal P (4)	
Metal – P	(4)	defeated	MC wood (8)
Wood – MC (8)	defeated Earth GI (5)	E (10)	
Earth –E	(10)	defeated Water R (1)	
Water	-R	(1) defeated Fire	Rt (2)
Fire	–Rt	(2) defeated Metal V (9)	
Metal – V	(9)	defeated	Drink GI (3)
Wood – GI	(3)	defeated Terre Cr	

At the same time, we witnessed the birth of a new magic square calf with base 5 and 10:

$$9-4 = 5 \dots \text{ and } 9+1 = 10 \dots$$

THE MORE BALD DIAMOND

Synthesis

Thus, in this *Lo Shu* victory cycle , we have:

- A system of orientation and correspondence of the Elements in the dextrorotatory direction, based on the cycle of victory, cycle *Ke*:
 - Water-Fire-Metal-Wood -Earth
 - North/West/South/East/Center

- An invariable encryption system:

Water	= 1-6
Fire	= 2-7
Drink	= 3-8
Metal	= 4-9
Earth	= 5-10

- A reading system based on the *Ke* victory cycle:
 - Water-Fire-Metal-Wood -Earth
- A recoding system using the previous cycle in the dextrorotatory direction, way of victory, Water always being oriented to the north:
 - In the *He Tu* we found:

1-6 = Water	= Rt (1) – MC (6) coming from T'-A'
2-7 = Fire	= VB (2) – TR (7) coming from A''-T''
3-8 = Wood	= V (3) – IG (8) coming from C''-G''
4-9 = Metal = R (4) – P	(9) coming from G'-C'
5-10 = Earth = E	(5) – GI (10) coming from CG

THE MORE BALD DIAMOND

In *Lo Shu*, the correspondences are now as follows:

1-6 = Water		= R (1) – VB (6)		going to G'-A''
2-7 = Fire		= Rt (2) – TR (7)		going to T'-T''
3-8 = Wood		= IG (3) – MC (8)		going to G''-A'
4-9 = Metal	= P (4) – G (9)			going to C' -C''
5-10 = Earth	= GI (5) – E		(10) going to GC	

This confirms the words of Mitchi Mesa Nishi zawa, noted previously: "The cause of the birth of the *Di Zhi* (the 12 earthly Branches) is in the *He Tu*. The *Di Zhi* are inseparable from the *Tian Gan* (the 10 Celestial Stems) and are born simultaneously. The result of the *Di Zhi* is found in the *Lo Shu*. »⁹¹

We have kept until the end the correspondences of the 8 master points, the 8 polarized radicals and the 8 marvelous vessels with the trigrams, according to the *He Tu*. They have only, together, changed direction and their costing has been modified. The *He Tu* is the "generation" cycle of the previous Heaven, *Xian Tian*. The *Lo Shu* is the cycle of "victory", of destruction, of the later Heaven, *Hou Tian*.

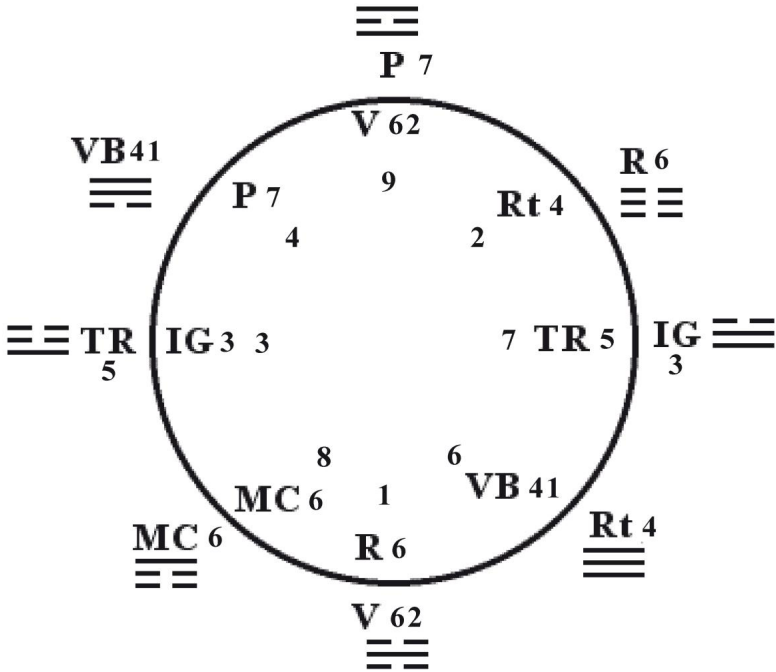

It is therefore interesting to note the transfers made, when we take into account the traditional correspondences of the master points of marvelous vessels with the *Lo Shu* trigrams (following diagram, external circumference), correspondences specified by the Master Yang Ji Zhou⁹² :

⁹¹ Mitchi Mesa Nishizawa, *General Treatise on Chinese Medicine*

⁹² Yang Ji Zhou: *Zhen Jiu Da Cheng*, book V, statement 110. See chap. 39

THE MORE BALD DIAMOND

in 1 (R 6, IQM) gives way to in	V 62 Kan G' YQM		
2 (Rt 4, Chong Mai) gives way to	R 6	Kun T' IQM	
in 3 (IG 3, Du Mai) gives way to TR 5 Zhen G' YWM			
in 4 (P 7, Ren Mai) gives way to VB 41 Xun C' Dai Mai			
in 6 (VB 41, Dai Mai) gives way to Rt 4 in 7	Qian A' Chong Mai		
(TR 5, YWM) gives way to in 8 (MC 6, IWM)	Dui	T" From May	
stays in place in 9 (V 62, YQM) gives way to	Gen A' IWM		
	P7	Li	C" Ren Mai

These relationships seem, at first glance, totally aberrant, the author indifferently assigning yin or yang trigrams to the master points and to the

THE MORE BALD DIAMOND

marvelous vessels that correspond to them, regardless of their own polarity.

In fact, this means that, according to the organization of the *Lo Shu*, victory cycle (external circumference - internal circumference relations):

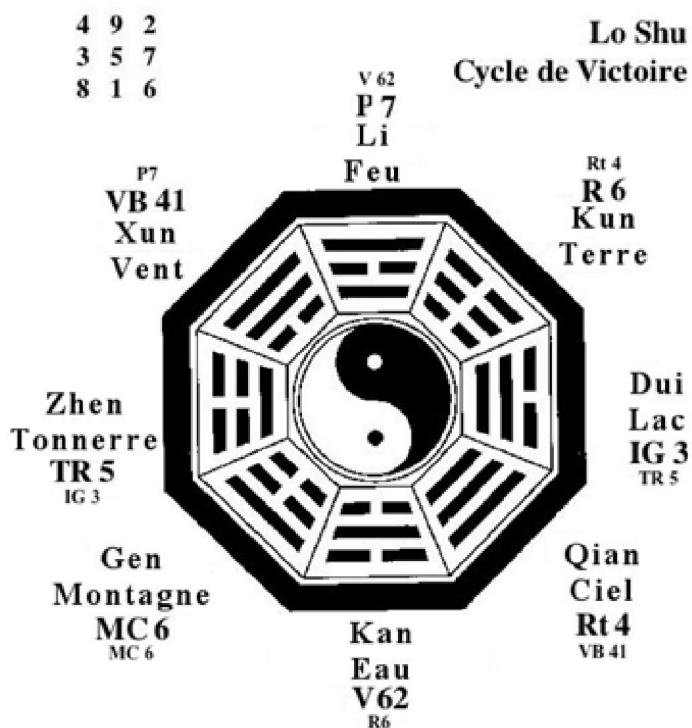

1-V 62	<i>Yang Qiao Mai</i> is victorious over <i>Yin Qiao Mai</i> (master R 6)
2-R6	<i>Yin Qiao Mai</i> is victorious over the <i>Chong Mai</i> (master Rt 4)
3-TR 5	<i>Yang Wei Mai</i> is victorious over <i>Du Mai</i> (master IG 3)
4-VB 41	<i>Dai Mai</i> is victorious over <i>Ren Mai</i> (master P 7)
6-Rt 4	<i>Chong Mai</i> is victorious over the <i>Dai Mai</i> (master VB 41)
7-IG 3	<i>Du Mai</i> is victorious over the <i>Yang Wei Mai</i> (master TR 5)
8-MC6	<i>Yin Wei Mai</i> is only victorious over himself
9-P7	<i>Ren Mai</i> is victorious over the <i>Yang Qiao Mai</i> (master V 62)

All this has been clarified by Master Yang Ji Zhou in the *Zhen Jiu Da Cheng*, book V, statements 106 to 110. It suffices to establish the relationships between these five statements to arrive at this overall vision of the two great cycles of *He Tu* and *Lo Shu*, of generation and victory, which, under other skies, were symbolically represented by the *Sauvastika* and the *Svas tika* turning in opposite directions to each other⁹³.

⁹³ See Yang Ji Zhou: *Zhen Jiu Da Cheng (The Great Compendium of Acupuncture and Moxibustion)*, in Collective translation: "The Extraordinary Meridians".

THE MORE BALD DIAMOND

Lo Shu, according to King Wen, and Master Points of Marvelous Vessels

12. Yi King generation of the six Qualities of Heaven, twelve components

The *He Tu*, organization of the eight trigrams according to Emperor Fu Xi, has enabled us to define in outline the generation of the eleven organs and viscera and the twelve meridians.

The analysis of this generation can now be carried out from the 64 hexagrams or mutations of the I Ching (PI. 21).

We have said that of the sixteen series of four hexagrams each making up the I Ching, the "little yang" series and hexagrams corresponded to a Yin, internal, expansion function, and the "little inn" series and hexagrams corresponded to a Yang, external, of constriction⁹⁴.

The eleven organs and viscera belonging to an internal function, Yin, dilator, will therefore be generated, specified, by the "little yang" series (series 3-6-8-10-11-14-16, plus two hexagrams of the series 4 and two of series 12), in the order we discovered from the *He Tu*.

The twelve meridians belonging for their part to an external function, Yang, constrictor, will be generated, specified, by the "little inn" series (series 1 - 2 - 5 - 7 - 9 - 13 - 15, plus two hexagrams from the 4 series and two from the 12 series) in the same order as the organs.

⁹⁴ See: Ch. 8: *The mutations of the I Ching* and ch. 15: *Periodicities*.

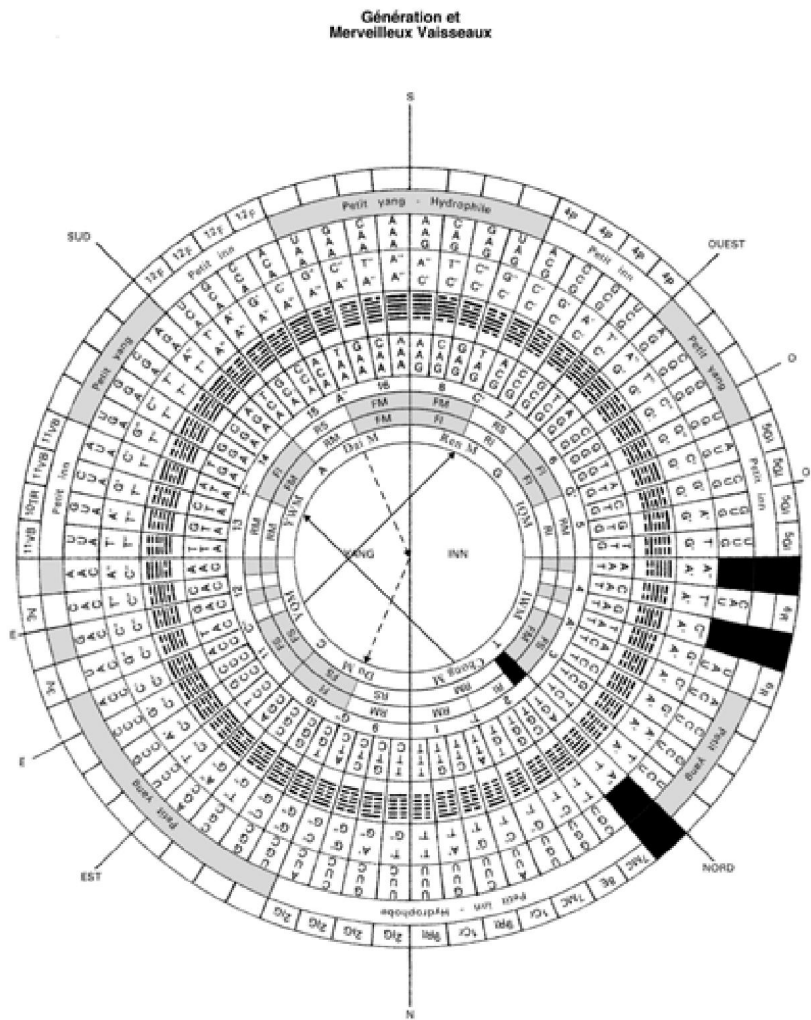

THE MORE BALD DIAMOND

Let us first see the generation of the meridians and for that, let us indicate on the Yi King, the correspondences of the marvelous vessels with the polarized radicals, in the order of the *He Tu generation cycle*: (Pl. 21, central diagram)

In G" – <i>From Mai</i>	(From M)
In C" – <i>Yang Qiao Mai</i> (YQM)	
In C' – <i>Ren Mai</i>	(Ren M)
In G' – <i>Yin Qiao Mai</i> (IQM)	
In A' – <i>Yin Wei Mai</i>	(IWM)
In T' – <i>Chong Mai</i>	(Chong M)
In T" – <i>Yang Wei Mai</i> (YWM)	
In A" – <i>Dai Mai</i>	(Dai M)

In the triplets (5th and 8th circumferences), the transformation of T, transcendent energy into U, universal energy, translates the passage from the level of the peripheral and central functions, three Heaters and three Hearths, to that of the internal and external functions - 5 Elements, 6 Qualities.

THE MORE BALD DIAMOND

Board 21

We only deal with the “small inn” sectors defined previously and which therefore correspond to a yang, external function, that of the 6 Qualities of the

THE MORE BALD DIAMOND

Heaven and its 12 meridians. Let's simply apply the *He Tu* generation cycle to these Meridians⁹⁵ :

- Heart, Cr, Grand Center (radical T), receives its energy from *Chong Mai* and depends on the two hexa-triplets the grams with the upper line yang, series 1, **UU**, and **UU** on the other two triplets of this series giving rise to the Spleen, Rt, as we shall see later.
- Small Intestine, GI, which receives its energy from *Du Mai*, depends on series 9, 'little inn'. This series follows directly, in the sinister gyratory sense, series 1, **UU**, which gives rise to the Heart. Therefore Heart and Small Intestine will have the same energy, but with two different orientations.
- Bladder, V, which receives its energy from *Yang Qiao Mai*, cannot be in series 11, small yang, and therefore depends on the two “small inn” triplets/hexagrams of series 12: **CAU** and **CAC** (with upper line yin) .
- Lung, P, which receives its energy from *Ren Mai*, cannot be in series 8, “little yang”, and therefore depends on series 7, “little inn”.
- Large Intestine, GI, coming from the center, after Lung and before Kidney, depends on the following “small inn” series (clockwise), series 5, after series 6, “small yang”.
- Kidney, R, which receives its energy from *Yin Qiao Mai*, but also from the center (Ming Men point in relation with the Master of the Heart and therefore with *Yin Wei Mai*), can only depend on the two triplet/hexagrams “little inn” of series 4: **UAU** and **UAC** (with yin upper line), only available, in contact with the avor attempt

⁹⁵ See [pl. 21](#), and ch. 10: *He Tu, generation of the 6 Qualities of Heaven and the 5 Elements of Earth*.

THE MORE BALD DIAMOND

return to the center represented by the other two triplets of this series⁹⁶.

- Master of the Heart, MC, who receives his energy from the *Yin Wei Mai*, is in turn shifted into *Chong Mai* in contact with the UGA center, "the stagnation", to depend on the two triplets/hexagrams of the series 2, small inn, **UGU** and **UGC** (with upper yin line). These two hexagrams have the meaning of "Recollection in the Temple":

UGC is the "Rassemblement", the contemplation; it is the lake ~~above~~ above the earth. ☵☵

UGU is "Enthusiasm"; it is thunder and music, ☳☳, your image of the Supreme Center, above the earth which leads to the ~~idea~~ idea of "Temple".

The two hexagrams **UGC** and **UGU** therefore bring us to "Recollection in the Temple", that is to say to the Master of the Heart and of Sexuality, Temple of Life.

Moreover, with regard to the **UGA hexagram**, it is interesting to note what the I Ching says about it, thus specifying its role of "Non-Sense", of punctuation⁹⁷ :

"The sky above withdraws ever further, and the earth below sinks ever deeper into the depths. The creative forces are not mutually related. It is the time of decadence and stagnation. »

- Stomach, E, has an obvious central aspect, with its anterior path though yang, as an antenna of the Earth element, and depends on the other hexagram triplet of series 2, "little inn", **UGG** (with line

96 These triplets, **UAG** and **UAA** are themselves intimately linked to the Master of the Heart-function and to the *Ming Men point*, DM 4.

97 See chap. 29: *DNA and genetic code*.

98 R. Wilhelm and E. Perrot: *Yi King The Book of Transformations*, hexagram 12

THE MORE BALD DIAMOND

higher yang), the meaning of which is "Progress", "Expansion".

- Spleen, Rt, which receives its energy from *Chong Mai* shares with the Heart, Cr, as we have seen, series 1, "little inn": **UUU** and **UUC** (with upper line yin) for the Spleen, **UUG** and **UUA** (with upper yang line) for the Heart.
- Triple Heater, TR, which receives its energy from the *Yang Wei Mai*, will depend on a very particular triplet/hexagram of the series 13, "little inn": **AUG**. Its meaning is "diminishment, beginning of decline" but above all "source of development", starting point of the renewal of forces, which corresponds well to the triple Heater; moreover, it is diametrically opposed to the two "Non-Sense" centers, **UAG** and **UAA**, which gives it a certain relationship with the center99.
- Gallbladder, VB, which receives its energy from *Dai Mai*, shifted in *Yang Wei Mai* will now depend on the three other triplets of this same series 13, "little inn", **AUU**, **AUC** and **AUA**.
- Liver, F, last meridian to be generated, Grand Center, will depend on series 15, last "little inn" series.

Ultimately, concerning the generation of meri
However, we note the following correspondences:

99 It should be noted that, in the genetic code, the triplet **AUG** codes for Methionine, the starting signal for the production of any protein; moreover, Methionine and Cysteine — the latter encoded by **UGU** and **UGC**, and analogous to the Master of the Heart, MC — are the only amino acids to possess a Sulfur atom. Would sulfuration not be a function related to the 2nd Fire of TR and MC?

THE MORE BALD DIAMOND

T' = <i>Chong Mai</i>	generates	Cr, Rt, E, MC
A' = <i>Yin Wei Mai</i>	generate	
G' = <i>Yin Qiao Mai</i>	generates	GI
C' = <i>Ren Mai</i>	generates	P
G'' = <i>From May</i>	generates	IG
C'' = <i>Yang Qiao Mai</i>	generates	V
T'' = <i>Yang Wei Mai</i>	generates	VB, TR
To'' = <i>Dai Mai</i>	generates	F

Couplings: large meridians (Pl. 22) —

The generation according to the *He Tu* is carried out in the order:

Cr, IG, V, P, GI, R, MC, E, Rt, TR, VB, F

Moreover, we notice that, according to the Yi King, are born from *Chong Mai*, source of all energies:

Cr, MC, E, Rt

The distribution of these energies will be done by a system of couples, true successive birth of the whole system.

This birth will determine a number of relationships:

- Rt, the more yin of the yin will couple with the more yang yins, p.

Rt, the greatest yin, **UUU**, "moisture of the Earth" and Water, in the north, will give its "quality" to the couple formed with P, the greatest yang of yin, "drought", in the southwest :

Rt-P = Tai Yin = Humidity = Supreme Yin

THE MORE BALD DIAMOND

- Cr, a little less yin, will couple with R, a little less yang in yin.
Cr, the motor "great center", with the upper yang line of its hexagrams, "central fire which radiates", still in the north but coming from the great centre, will give its "quality" to the couple formed with R, to the west, and in contact with two "nonsense", "cold" centers:
Cr -R = Shao Yin = Fire that radiates = Medium Yin
- F, will couple with the last yin, MC. F, the receptive "great center", "pressure-feng - wind", will give its "quality" to the couple formed with MC, "burning heat or depression", to the north, in contact with the "non-sense" center **UGA** (it's the depression that calls the wind):

F -MC = Jue Yin = Feng -Pressure = Dying Yin or End of Yin

- E, yang in yin, will couple with GI, other yang in yin; GI, center after P, in the west, in the cycle of generation, participates in its "drought quality" and coupled with E which can only be "humidity" from the north, gives it to it (we have gone from yin to yang):
E-GI = Yang Ming = Drought = Bright Yang
Yang Ming, by being born from the center and from yin, gives birth at the same time to all the yangs and then are born successively the couple IG, V, and the couple TR, VB; E and GI (yang in yin) told us that at the level of yang, it is the closest polarities that attract each other.
- IG, V, yang both are in the most yin part of the yang (northeast). IG, son of Cr, in the cycle of generation, inherits his "quality" "fire which radiates", but coupled with V which can only be "quality" "cold" (like R with Cr) undergoes the latter (inversion of yin to yang):

IG-V = Tai Yang = Cold = Supreme Yang

THE MORE BALD DIAMOND

- TR, VB, yang both are in the most yang part of the yang (southeast).
VB, before F, in the cycle of generation participates in its " *feng* -pressure" "quality", but coupled with TR which can only be "burning heat - depression" (like MC with F), undergoes the latter (inversion from yin to yang):

TR-VB = *Shao Yang* = (Burning Heat)-Depression = Middle Yang.

The application of the Yin-Yang system to the six Qualities of Heaven can present some difficulties if one does not follow a perfectly logical and rigorous development, taking into account the "structure" and "energy" aspects.

Recall that we find:

- in *Shao Yin* = Fire
Quality of a structure in calcination, calcined (Yang)
Fire energy is Yin
- in *Tai Yang* = Cold
Quality of a frozen, frozen structure (Yin)
Cold energy is Yang
- in *Jue Yin* = Feng -Wind
Quality of a structure in compression, compressed (yang)
The energy of the Feng -Wind is therefore Yin
- in *Shao Yang* = Heat
Quality of a structure in depression, dilated (Yin)
Heat energy is Yang
- in *Tai Yin* = Humidity
Quality of a hydrophilic structure (Yang)
The energy of Humidity is therefore Yin
- in *Yang Ming* = Drought
Quality of a hydrophobic structure (Yin)
The energy of the Drought is therefore Yang

Plate 22

13. Yi King

Generation of the five Elements of the Earth, eleven components+1

We will now only deal with the "small yang" series which therefore have an internal Yin function: "5 Elements of the Earth". Let us also take into account the three "non-sense" centers **UGA**, **UAG** and **UAA**, which, as representatives of the unmanifested center, can be attached to them (Pl. 23).

The basic orientation, north-south-east-west, remains, in relation to the polarized radicals/wonder vessels which generate the components of internal function:

- The north-south axis is to the north, at **T'A"** and to the south, at **A"T'**
- The east-west axis is in
 - **C"T'** to the east
 - **G'A"** to the west

Starting from the north according to the ciphering and the correspondences defined in the study of *He Tu*, we have¹⁰⁰ :

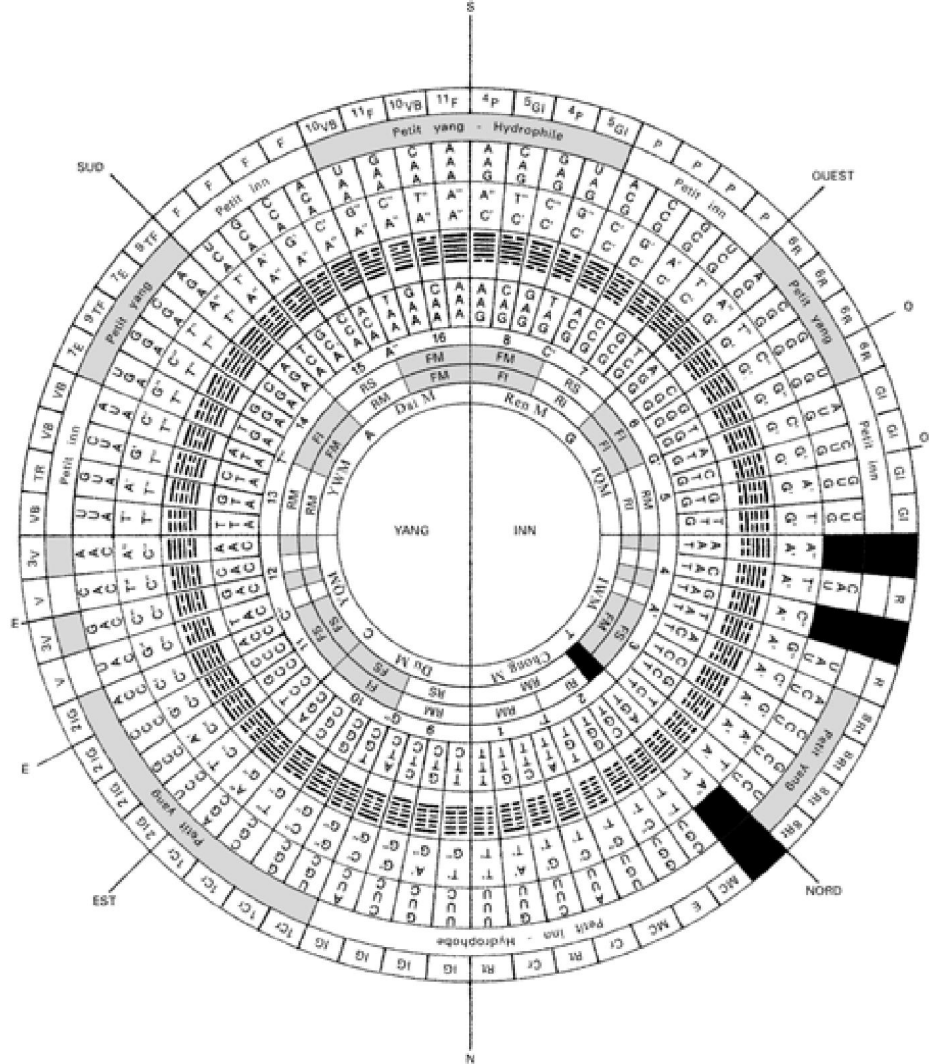

¹⁰⁰ See Chap. 10: *Laws of generation of the 5 Elements*.

THE MORE BALD DIAMOND

It is now a matter of considering the “small yang” sectors defined in the previous chapter and which therefore correspond to an internal Yin function, that of the 5 Elements of the Earth and its eleven functions plus one, the latter being diffused throughout the organism. Let us simply apply the *He Tu* generation cycle to these Functions¹⁰¹ :

- **Heart, Cr**, coming from the center, appears with the first “little yang” series, in the North-East, the 10 **CG** series on which it depends.
- **Small Intestine, GI**, moving in the same direction, depends on the following “little yang” series, series 11 **CC**.
- **Bladder, V**, in turn depends on the two “small yang” triplets/hexamagrams of the 12-series **CAG** and **CAA** (with upper yang line).
- **Lung, P**, and **Large Intestine, GI**, share the triplets/hexamagrams of the 8 series, “small yang” series, on which they depend: **GAA** and **GAG** (with upper yang line) for the Lung, **GAC** and **GAU** (with upper yin trait) for Large Intestine.
- **Kidney, R**, depends on the following “small yang” series: series 6GG .
- **Master of the Heart, MC**, unstructured, has a privileged relationship with the two “Non-Sense Centers” of the 4 series and the “little yang” triplets/hexamagrams which correspond to them: **UAA** and **UAG**
- **Stomach, E**, because of the passage through the center which precedes, will depend on the two triplets/hexamagrams (with upper line yin) of the series 14 “little yang”, **AGU** and **AGC**.
- **Rate, Rt**, with feedback through the center linked to quality

¹⁰¹ See chap. 10: *He Tu generation of the 6 Qualities and the 5 Elements* and [Pl. 23](#), *Yi King He Tu*.

THE MORE BALD DIAMOND

Central Stomach, depends on the series 3 **UC**, "little yang", diametrically opposed to the previous series. It is for Stomach and Spleen of the same energy, but with two different orientations.

- **Triple Hearth, TF**, will in turn depend on the other two triplets/hexagrams (with upper yang line) of the 14 "little yang" series: **AGG** and **AGA**.
If this series 14 is shared between E and TF, it is because TF, at the same time 2nd Fire and Earth, as we have seen previously, has on its side a privileged relationship with the Heart, Fire: they have the same energy, but with two different orientations.
- **Gallbladder, VB**, depends on the two triplets/hexagrams (with upper line yin) of the last "small yang" series, series 16: **AAU** and **AAC**.
- **Liver, F**, finally depends on the two triplets/hexagrams (with upper line yang) of this same series 16, "little yang", **AAG** and **AAA**.

In summary, then, we find the next generation at the level of internal functions in the 5 Elements:

<i>From May</i>	generates Cr – Yin	fire element
<i>Yang Qiao Mai</i>	generates IG – Yang Element Fire	
	generates V – Yang Element Water	
<i>Yang Wei Mai</i>	generates E – Yang Element Earth	
	generates TF – Yang Element 2nd Fire	

102 See chap. 29: *the DNA double helix and the genetic code*. The amino acids, serine and arginine confirm this double proximity between Stomach and Spleen on the one hand, and Triple Hearth and Heart on the other.

THE MORE BALD DIAMOND

<i>Dai May</i>	generates VB –	Yang Element	Wood
	generates	–Yin	Wood Element
<i>Ren May</i>	generates F Element	Metal	
	generates GI –	Yang Element	Metal
<i>Yin Qiao Mai</i>	generates R–Yin		Water Element
<i>Yin Wei Mai</i>	generates Rt–Yin		Earth Element

We know that all reasoning and all generation must start from Water and from the north (PI. 23).

We have seen in the generation of *He Tu* that R, Kidneys (numbered 4), is Water and is oriented to the north. Cr, Heart, Fire, will therefore be oriented to the South during the structuring of the components of the 5 Elements.

Ultimately, we have the next generation of the 5 Element components from the wonderships:

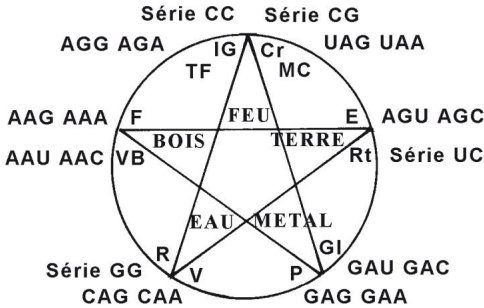

G"Du May	generates	CG series	CR	= Fire
C" Yang Qiao Mai	generates	CC series	GI	= Fire
	generates	CAG-CAA V generates		= Water
T" Yang Wei Mai	AGU-AGC E generates	AGG-AGA		= Earth
	TF generates	AAU-AAC VB		= 2nd Fire
A" Dai Mai	generates	AAG-AAA F generates		= Wood
	GAA-GAG P generates	GAC-GAU		= Wood
C' Ren Mai	GI			= Metal
				= Metal
G' Yin Qiao Mai generates	GG series		R	= Water
A' Yin Wei Mai	generates	UAA-UAG (MC) =	Unstructured	
	generates	serial UC	Rt	= Earth
T' Chong Mai	UGA			= Nonsense

Or :

THE MORE BALD DIAMOND

From May	G'' generates Cr		
Yang Qiao Mai C'' generates	IG Fire		
Yang Wei Mai T'' generates	TF		
Yin Wei Mai	HAS'	generates Rt	Earth
Yang Wei Mai T'' generates	E		
Ren May	VS'	generates P	Metal
		generates GI	
Yin Qiao Mai G'		generate	Water
Yang Qiao Mai C'' generates	V		
Dai May	HAS''	generates F	Drink
		generates VB	

We know the disposition to adopt, that of the circular cycle of generation, *Sheng* cycle : Fire-Earth - Metal-Water-Wood

It should be noted that, in this analysis according to the I Ching, the *Chong Mai*, T', has no direct representative at the level of the 11 components of the 5 Elements¹⁰³.

¹⁰³ However, the *Chong Mai*, as the Vital Vessel, distributes their energy directly to all the organs and meridians. (*Ling Shu*, Chap. 38: "This is *Chong Mai*, Sea of

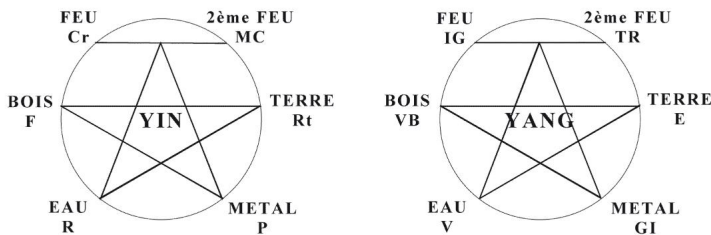

THE MORE BALD DIAMOND

The internal function of the 5 Elements as a generation factor (the 6 great meridians/12 components are born through it) will benefit from an external antenna allowing it to integrate the signals received by the external functions in correspondence with the 6 Qualities of the Sky, Fire, Cold, Pressure, Depression, Humidity, Drought.

These are the two “small circulation” cycles supported by

- on the one hand, the Yin meridian-components
- on the other hand, the Yang meridian-components.

Indeed, if we separate the Yin components and the Yang components, in the external function, the generation cycle of the 5 Elements defines the following two circulations, starting from Wood:

In the Yin, MC appears as 2nd Fire, Yin, in parallel with TR, 2nd Fire, Yang in the Yangs.

It should be noted that due to this external antenna of the internal function, there is an amplification

5 *zang* and 6 *fu*, which really feeds them all... Its ascending branch soaks all the Yang... Its descending branch soaks the 3 Yin. "). See chap. 32.

THE MORE BALD DIAMOND

such that each of the component-elements in the external function, will have in itself a reproduction of the 5 Elements thus allowing it to code and signal to the internal function itself, the external attacks on a precise territory.

On each of the meridians/components of external function, we will therefore find, in acupuncture, five points which will each have a precise "Element quality" (Pl. 24):

Wood-Fire-Earth-Metal or Water.

In the Yin meridians and it is the Yin energy in question, we will have:

Corresponding to Wood -East-Spring -Liver:

The *Jing* point or end point.

This point, which has the quality of "Wood", will have a function related to the function of the east and of spring; it will therefore correspond to "the energy which rises like water rising from the bottom of a well".

Corresponding to Fire-South-Summer-Heart :

The *Ying* point or second point. This point, which has the quality of "Fire", will have a function related to the function of the south and of summer; it will therefore correspond to "the energy which stands still, accumulates, like water which flows weakly and stagnates".

Corresponding to Earth-Centre-Heatwave (5th season)-Rate:

The *Shu* point or third point.

This point, which has the quality "Earth", will have a function in relation to the function of the center and of the fifth season; it will therefore correspond to "the energy

THE MORE BALD DIAMOND

which grows where it goes, the source, like water growing and flowing farther".

Corresponding to Métal-Ouest-Automne -Poumons:

The *Jing* (*King*) point or fourth point.

This point, which has the quality "Metal", will have a function related to the function of the west and of

autumn; it will therefore correspond to "the energy which flows freely, where it passes, like water which begins to flow freely".

Corresponding to Water-North-Winter-Reins:

The *He* point or fifth point.

This point, which has the quality "Water", will have a function related to the function of the north and of

winter; it will therefore correspond to "the energy which penetrates, where it enters, like water which unites with the sea".

Like Metal, *Jing point* (*King*) at the level of the Yin meridians, is the place where "energy flows freely", this one can, in this place, arise, overflow, and not be at the level of Yang.

But "the energy that arises, like water rising in the well" corresponds well to the *Jing point*, the end point of the Yang meridians, in Metal.

We indeed find in the Yang meridians and it is Yang energy in question:

Corresponding to Metal-West-Autumn-Large Intestine:

The *Jing* point or end point.

Metal Quality

Function: "energy that arises..."

THE MORE BALD DIAMOND

Corresponding to Water-North-Winter -Bladder:

The *Ying* point or second point.

Water Quality

Function: “stationary energy...”

Corresponding to Wood -Is-Spring -Gallbladder:

The *Shu* point or third point.

Wood Quality

Function: “energy that amplifies...”

Corresponding to Fire-South-Summer-Small Intestine:

The *Jing* (*King*) point or fourth point.

Fire Quality

Function: “energy flowing...”

Corresponding to Earth - Center - Heat wave (5th season) - Stomach:

The *He* point or fifth point.

Land Quality

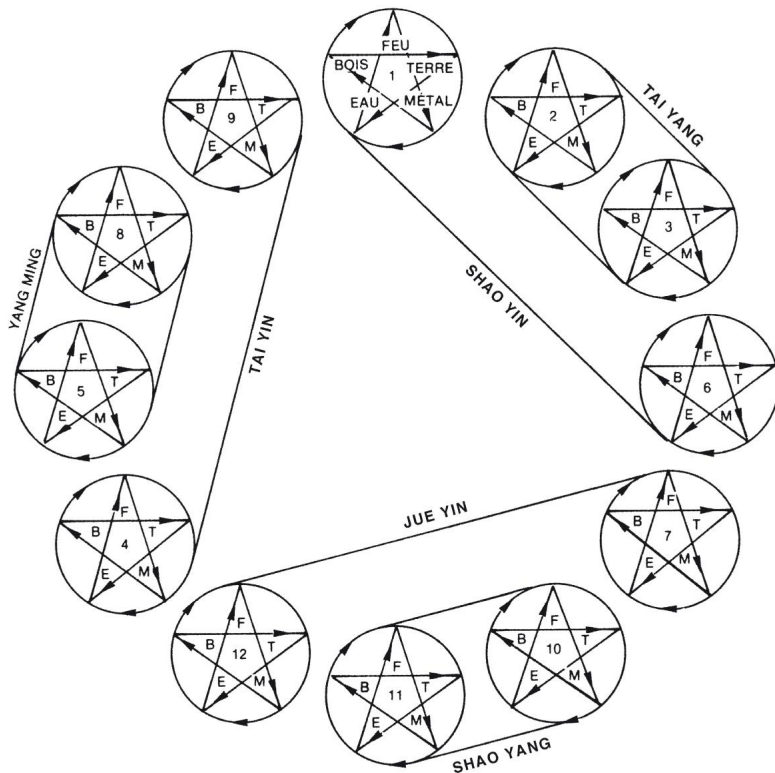

Function: “energy that penetrates...”

The following observations emerge from the above analysis:

At the Yin level, the Wood is the place where the energy arises; the amplification of this energy to pass at the level of the Yang must therefore also be found there. We have in fact in Wood, on the Yang meridians, the *Shu point*, the third point, “energy which amplifies... the source”. This means that at the Yang level, it is the *Shu point*, the source, which will be the point of amplification, the outlet of the Yin meridians into the Yang meridians.

THE MORE BALD DIAMOND

6 QUALITÉS
12 FOIS 5 ÉLÉMENTS

Board 24

We then notice that, on the Yin meridians, the *Shu point*, source, is in correspondence with the Earth, center, (Rt), which is perfectly logical. This *Shu point*, source, then allows the amplification of the central energy, by being the outlet of this energy.

THE MORE BALD DIAMOND

gie in the whole energy system of the Yin meridians and later the Yang meridians, through them.

But the Yang system must have access to this central "pool" of energy through a direct amplifying "spillway"; a sixth point will allow this access and will therefore be Earth (center) at the same time as 2nd Fire, terrestrial Fire.

The *Yuan*, Earth and 2nd Fire point, which therefore only exists on the Yang meridians, is thus similar to the *Shu* point of the Yin, source and amplifier of energy at their level, also on Earth.

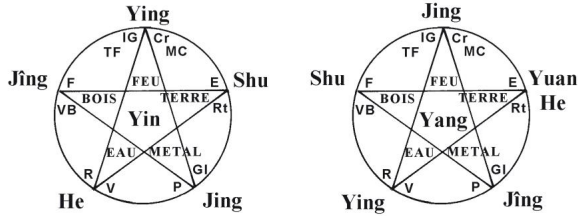

The *Yuan* point will be located, on the Yang meridians, between the third *Shu point*, and the fourth point, *Jing (King)* : indeed, it is also a "source" like the third point and can only be located nearby thus allowing to the energy to "flow..." to the next point, *Jing (King) point*.

This does not prevent the Yang meridians from having a second point in contact with the center, Earth, the *He point*. But this is then in correspondence with "the energy that penetrates, where it enters, like water that unites with the sea": it is the return of energy to the center, to the central reservoir, to the 5 Elements, internal function.

We can thus define the point *He* as the point of penetration of the energy of the meridians:

- to the Yin organs: *He* point of the Yin
- towards the Yang viscera: *He* point of the Yang

THE MORE BALD DIAMOND

As a corollary to the generation of the "6 Qualities of Heaven", external function Yang, and the "5 Elements of the Earth", internal function Yin, it should be remembered that, out of the 12 external energies, two are in a "quality" relationship. more accurate, **UUG-UAA** and the **CU** series (Cr-IG).

This, theoretically, reduces the number of external energies to 11.

It should also be remembered that, of the 11 internal energies, two times two are in relation to a more precise "quality",

- **AGG-AGA** and the **CG** series (TF-Cr)
- **AGU-AGC** and **UC** series (E-Rt)

which, theoretically, reduces the number of internal energies to nine.

We would therefore have in total, between the energies of external function and the energies of internal function, twenty "generated" energies or radicals; however, one must take into account their orientations and there are therefore twenty-three of them: if some of these energies are similar, they are not similar¹⁰⁴.

The *He Tu* had given the general correspondences

¹⁰⁴ See chap. 15: *Periodicities and Regulation*.

THE MORE BALD DIAMOND

between the three Heaters - three Hearths on the one hand, and the 5 Elements - 6 Qualities on the other, via the polarized radicals. It is now possible to note the precise correspondences existing between,

- the three Heaters and the 6 Qualities/12 components
 - the three Hearths and the 5 Elements/11 components
- and this through the intermediary of the eight polarized radicals - marvelous vessels, comprising 64 triplets-codons, "generating system proper"

(Plate 23).

In the 6 Qualities/12 components, in the order of the great circulation, we find the following correspondences:

- Heart (Cr) coming from series 1, Median Heater, via the *Chong Mai*, **T'**, is universal energy (food, genetics).

– UUA-UUG

- Small Intestine (GI) coming from series 9, Superior and median Heater, via the *Du Mai*, **G''** is combustion and universal energy (genetic, food).
 - **CU** series
- Bladder (V) coming from series 12, Superior Heater, via the *Yang Qiao Mai*, **C''**, is combustion energy (food, universal).

– CAU-CAC

- Kidneys (R) coming from series 4, Median Heater, via the *Yin Wei Mai*, **A'**, is universal energy (food, combustion).

– UAU-UAC

- Master of the Heart (MC) coming from series 2, Median and lower Heater, via the *Chong Mai*, **T'**, is universal and genetic energy (combustible).
 - **UGU-UGC**

THE MORE BALD DIAMOND

As the “center substitute” after R (4 in the *He Tu*), the Master of the Heart is also the repository of the (central) genetic energy that came from GI (10 in the *He Tu*)

- Triple Heater (TR) from series 13, Median Heater, via the *Yang Wei Mai, T''*, is alimentary and universal (genetic) energy.

– **AUG)**

- Gallbladder (VB) coming from series 13, Median Heater, via the *Yang Wei Mai, T''*, is alimentary and universal energy (combustible).

– **AUU-AUC-AUA**

- Liver (F) coming from series 15, Median and superior Heater, via the *Dai Mai, A''*, is alimentary, combustion energy (genetic, universal).
 - **AC** series
- Lungs (P) coming from series 7, Lower and upper Heater, via *Ren Mai, C'*, is genetic energy, combustion (food, universal).

– **GC** - series

- Large Intestine (GI) coming from series 5, Lower and median Heater, via the *Yin Qiao Mai, G'*, is genetic and universal energy (food, combustion).
 - **GU** series
- Stomach (E) coming from series 2, Middle and lower Heater, via the *Chong Mai, T'*, is universal and genetic energy.

– **UGG**

- Rate (Rt) coming from series 1, Median Heater, via the *Chong Mai, T'*, is universal energy (combustible).
 - **UUC-UUU**

In the 5 Elements/11 components/12 functions (including the Master of the Heart), in the order of Elements

THE MORE BALD DIAMOND

ments and from Yin to Yang, the correspondences are as follows:

Drink

- Liver (F) **AAG-AAA**, Yin, coming from series 16, Median hearth, via the *Dai Mai*, **A"**, is food energy (genetic)
- Gallbladder (VB) **AAU-AAC**, Yang, coming from series 16, Median hearth, via the *Dai Mai*, **A"**, is alimentary and universal energy (combustive)

Fire

- Heart (Cr) series **CG**, Yin, coming from series 10, Upper and lower Hearth, via the *Du Mai*, **G"**, is combustion energy, genetic (universal, food)
- Small intestine (IG) series **CC**, Yang, coming from series 11, Upper hearth, via the *Yang Qiao Mai*, **C"**, is combustion energy (food, universal, genetic)

2nd Fire/Earth

- Master of the Heart (MC) **UAG-UAA**, Yin, **unstructured**, coming from series 4, Median hearth, via the *Yin Wei Mai*, **A"**, is universal energy, food (genetic)
- Triple Hearth (TF) **AGG-AGA**, Yang, coming from series 14, Middle and lower focus, via the *Yang Wei Mai*, **T"**, is food and genetic energy

Earth

- Spleen (Rt) series **UC**, Yin, coming from series 3, Median and upper hearth, via the *Yin Wei Mai*, **A'**, is universal and combustion energy (food, genetics)
- Stomach (E) **AGU-AGC**, Yang, coming from Series 14, Hearth

THE MORE BALD DIAMOND

median and inferior, via the *Yang Wei Mai*, **T''**, is alimentary and genetic energy (universal and comburent)

Metal

- Lungs (P) **GAG-GAA**, Yin, coming from series 8, Lower and middle hearth, via *Ren Mai*, **C'**, is genetic and food energy
- Large Intestine (GI) **GAU-GAC**, Yang, coming from series 8, Inferior and median hearth, via *Ren Mai*, **C'**, is genetic and alimentary energy (universal, comburent)

Water

- Kidneys (R) series **GG**, Yang, coming from series 6, Lower hearth, via *Yin Qiao Mai*, **G'**, is genetic energy (food, combustion, universal)
- Bladder (V) **CAG-CAA**, Yang, coming from series 12, Superior and median hearth, via the *Yang Qiao Mai*, **C''**, is comburent and alimentary (genetic) energy.

The following points emerge from these correspondences:

The three Heaters were a peripheral function of preheating, from the outside towards the center of their own energy system; the 6 Qualities/12 components that they have become represent an external function of relation, of defence, of elimination, of specification, from the center towards the exterior of their own energy system, therefore of yielding energy to the system next energy.¹⁰⁵

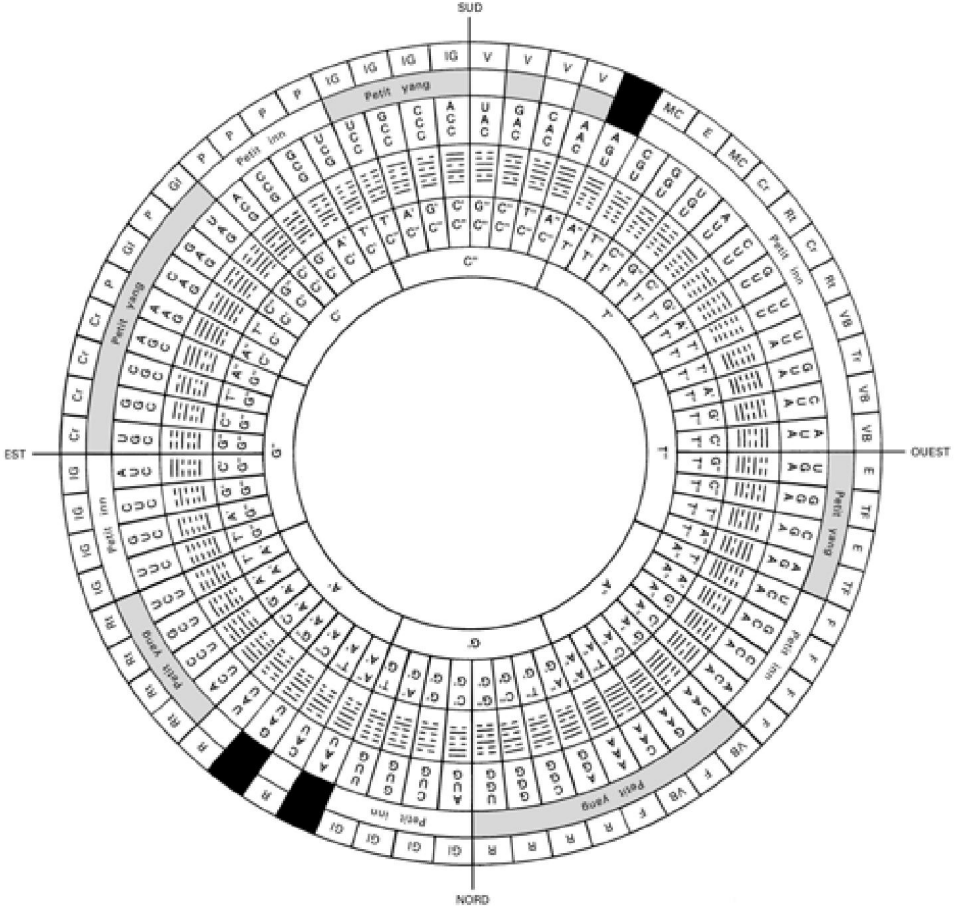

Plate 25

The three Hearths were a central function of transformation, elaboration and specification

THE MORE BALD DIAMOND

energies that can be used by their own energy system; the 5 Elements/11 components they have become represent an internal function of nourishing and structuring their own energy system and transferring their energies to the next energy system.

The 6 Qualities/12 components therefore have the function,

- In their own system:
 - Superficial nutrition
 - defense against external “disturbed energies”:

<i>Tai Yang</i>	Cold	<i>Shao Yin</i> Fire	
<i>Yang Ming</i> Drought		<i>Tai Yin</i> Humidity	
<i>Shao Yang</i>	Depression (Heat) <i>Jue Yin</i>		Pressure (Wind)

They answer

- to superficial cold by internal fire and vice versa
- to superficial dryness by internal humidity and vice versa
- to superficial depression by internal pressure and vice versa
- In relation to the following energy system:
 - Specification of the energies for the constitution of the 3 Heaters of the following energy system, **TGCA**, in their different “small inn” mutations.
 - Surrender of their own energies to the next energy system.

The 5 Elements/11 components therefore have the following function:

- In their own system:
 - Deep general nutrition.

THE MORE BALD DIAMOND

- Transmission of nutritive energy to the external function.
- Internal defense of their system.

Each of the Elements then corresponds to a particular function/quality:

Fire (Cr-IG-MC-TF) blood function - blood and vessels: capillary pressure - viscosity - oncotic pressure; but also, magnesium-iron cycle, Mg-Fe¹⁰⁶

Earth (Rt-E) nerve function - flesh (cells): sodium-potassium cycle, Na-K

Metal (P-GI) respiratory function - skin: oxygen-carbon dioxide cycle, O₂ -CO₂

Water (RV) bone function - skeleton: phosphorus-calcium cycle, P-Ca

Wood (F-VB) locomotor function - muscles: glycogen-glucose cycle

- In relation to the following energy system:
 - Specification of the energies for the constitution of the 3 Hearths of the following energy system, **TGCA**, in their different “little yang” mutations.
 - Transfer of their own energies to the next energy system.

Let us open a parenthesis here to specify that an organization of the 64 hexagrams, according to the *Lo Shu* of King Wen, will account for this transfer of energy to the following energy system. It is no longer a question then of generation, but of the victory of the generated system over the generative system (Pl. 25)¹⁰⁷.

¹⁰⁶ Magnesium or iron in the porphyrinic nuclei of chlorophyll and hemoglobin

¹⁰⁷ To my knowledge, this representation of the 64 hexagrams is not traditional.

THE MORE BALD DIAMOND

The direction of circulation of the energy is reversed compared to that of Yi King according to *He Tu*: it is carried out in the dextrogyre direction, opposite direction of that of the needles of a watch.

Let us now return to the traditional I Ching in order to discover a new harmonious aspect.

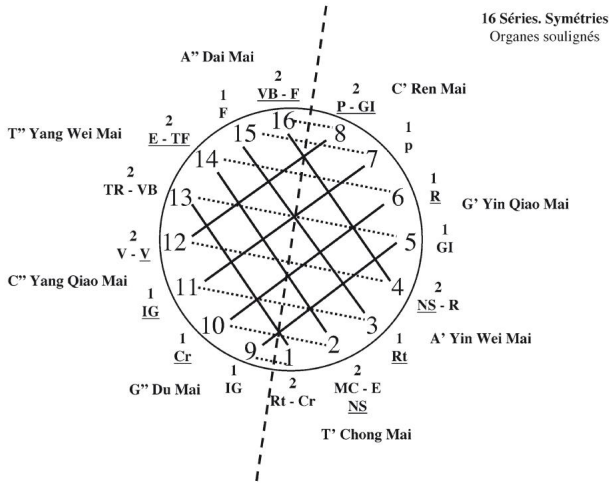

Distribution of the 24 Function Components Internal and External

The distribution on the I Ching wheel¹⁰⁸ of the 24 components (meridians and organs) of the internal and external functions, 5 Elements of the Earth and 6 Qualities of the Sky, may seem, at first sight, completely anarchic. Besides, why are there two in series 1 - 2 - 4 - 8 - 12 - 13 - 14 - 16, and only one in series 3 - 5 - 6 - 7 - 9 - 10 - 11 - 15, and not a different distribution?

It is only by linking these different series, diagonally — according to the polarities (T'T" -A'A"...) of the corresponding Merveilleux Vessels — and horizontally (well... almost), perpendicular to the Yin-Yang inversion axis - according to the distribution of the "little inn" (meridians) and "little yang" (organs) series - that a strange symmetry appears, thus marking the harmonious organization of life, along with the ideal location of each of the 24 components:

¹⁰⁸ See [pl. 23](#).

THE MORE BALD DIAMOND

Would the nine Palaces of *Feng Shui* appear in this grid with nine boxes, symbolically marking the presence of the posterior Heaven in the anterior Heaven?

On analysis, the following strengths emerge:

- In **T' (Chong Mai)** and **T'' (Yang Wei Mai)**, 4 times two components, i.e. 8
- In **A'' (Dai Mai)** and **A' (Yin Wei Mai)**, 2 times two and twice one components, i.e. 6
- In **C'' (Yang Qiao Mai)** and **C' (Ren Mai)**, 2 times two and twice one component, i.e. 6
- In **G' (Yin Qiao Mai)** and **G'' (Du Mai)**, 4 times a component, i.e. 4

The precision of the filling of the Yi King series, as the structures are put in place according to the *He Tu* — in the order 1-T North, 2-A South, 3-C East, 4-G West — is absolutely perfect.

For its part, the symmetry of the meridians and

THE MORE BALD DIAMOND

organs is equally stunning in its simplicity (dotted lines):

- Series 8 and 16: internal function organs
- Series 7 and 15: external function meridians
- Series 6 and 14: internal function organs
- Series 5 and 13: external function meridians
- Series 4 and 12: in each, an organ¹⁰⁹ of internal function and a meridian of external function
- Series 3 and 11: internal function organs
- Series 2 and 10: here, apparently a hiatus, since we find in series 2 meridians of external function, and in series 10 an organ of internal function; but that would be to forget the presence in series 2 of the main triplet/hexagram TGA (or UGA) "Non-Sense" of central character, and then the particular characteristics of the meridians of Master of the Heart and of the Stomach, both possessing an obvious central aspect even if they belong to the external function, which nevertheless links this series to series 10 on which depends the Heart, the first organ to appear from the center.
- Series 1 and 9: external function meridians.

¹⁰⁹ The "Non Senses" of series 4, **UAG** and **UAA**, are intimately linked to the Master of the Heart in its internal function, unstructured, diffused throughout the organism.

14. Cycles of Energy in Internal and External Functions, 5 Elements of Earth and 6 Qualities of Heaven

Internal Function Generation Schedule, 5 Elements

It is known that there is a circadian circulation of energy in the 12 meridians. In addition to this 24-hour cycle (12 times 2 hours), a second cycle concerns the 5 Elements. Given their Yin-Yang polarization in *Tian Gan* (10 terrestrial energies), 5 Yin and 5 Yang, each of them will correspond to a double phase of exactly 2h24':

$$2\text{h}24' \times 10 \text{ (5 Yin and 5 Yang)} = 24 \text{ hours}$$

The Earth is thus the central point around which the ten terrestrial energies gravitate. The Stomach, E, being analogous to the Earth, it is the Triple Hearth, TF, which then corresponds to the Element Earth, Yang, Fire earthly.

Knowing that the energy of generation penetrates in P (Lungs), beginning of the genesis, of the structuring of forms, at 3 o'clock. of the morning solar hour, we find in **the order of generation** of the 10 components of the 5 Elements:

<i>Ding</i> – generation in G" from 7:48 p.m. to 10:12 p.m. = Fire (Cr)	
<i>Bing</i> – generation in C" from 10:12 p.m. to 12:36 a.m.	= Fire (Gl)
<i>Ren</i> – generation in C" from 0:36 to 3:00	= Water (V)
<i>Xin</i> – generation in C' from 3:00 to 5:24	= Metal (P)

THE MORE BALD DIAMOND

<i>Geng</i>	– generation in C' from 5:24 to 7:48	= Metal (GI)
<i>Gui</i>	– generation in G' from 7:48 a.m. to 10:12 a.m.	= Water (R)
<i>Yes</i>	– generation in A' from 10:12 a.m. to 12:36 p.m. = Earth (Rt)	
<i>Wu</i>	– generation in T'' from 12:36 p.m. to 3:00 p.m. = Earth (TF)	
<i>jia</i>	– generation in A'' from 3:00 p.m. to 5:24 p.m. = Wood (VB)	
<i>yi</i>	– generation in A'' from 5:24 p.m. to 7:48 p.m. = Wood (F)	

Hours of operation of the 6 Qualities/ 12 components (meridians) of external function: solar time

Remember that in relation to the 24-hour circadian cycle, the “great circulation” of energy in the 12 components/meridians includes 12 phases of two hours each.

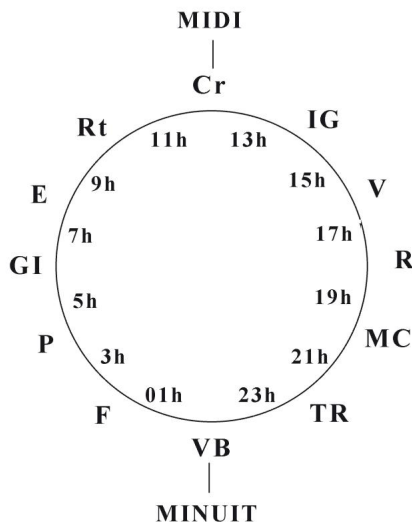

We have just seen that the generation of Cr, Element, takes place in 2 h 24', from 19 h 48' to 22 h 12'. It is therefore only at 10:12 p.m. that the energy can pass at the level of Cr, meridian. However, its manifestation can only take place 48' later. Indeed, Cr and IG Elements represent two phases of 2h24' or 4h48'. To settle on two phases of two hours, that is to say four hours, the difference of 48' additional is necessary.

We can therefore consider that the energy generated does not really reach the Heart meridian (Cr-IG) until 48' later, that is to say at 11 p.m.: the energy thus passes from 10 phases of 2 h 24 ' (at the level of the 5 Elements/organs) to 12 phases of 2 hours (at the level of the 6 Qualities/meridians).

Knowing that in the great circulation of the meridians, Cr comes to the south after having "tilted" by 180°,

THE MORE BALD DIAMOND

one must understand that the energy will enter the component – meridian of the Heart (Cr) at 11 o'clock in the morning. This gives us the energy flow schedule in the meridians.

The vital energy enters P, Lungs, at 3:00 am, which is logical and allows this energy to enter the Heart meridian at 11:00 am following the “great circulation”.

General operating schedule 5 Elements/ 6 Qualities: solar time

We know that the "small circulations" Yin and Yang at the level of the 12 components/meridians of the 6 Qualities of Heaven, correspond to the general antenna of the internal function in external function, and are therefore subject to the laws of the 5 Elements.

THE MORE BALD DIAMOND

Two series of correspondences will then come into play:

- The meridians in relation to the 5 Elements and the two small circulations (MC and TR then have a “Terrestrial Fire” value):

Fire	CR	= Yin Fire	– <i>Ding</i> _
	GI	= Fire Yang– <i>Bing</i>	
Earth	RT–MC =	Earth Yin– <i>Ji</i>	
	E–TR =	Yang– <i>Wu</i> Earth	
Metal	P	= Metal Yin – <i>Xin</i>	
	IM	= Metal Yang– <i>Geng</i>	
Water	R	= Yin Water	– <i>Mistletoe</i>
	V	= Yang– <i>Ren</i> Water	
Drink	F	= Yin Wood	– <i>Yi</i> _
	VB	= Wood Yang– <i>Jia</i>	

- The points of the meridians in correspondence with the 5 Elements, selective antennas of the 5 Elements at the level of each of the components of the external function:

Fire	<i>Ying</i> point in the Yin	
	Point <i>Jing</i> in the Yang	
Earth	Point <i>Shu</i> in the Yin	
	Point <i>He</i>	in the Yangs
Metal	Point <i>Jing</i> in the Yin	
	Point <i>Jing</i> in the Yang	
Water	Point <i>He</i> in the Yin	
	Point <i>Ying</i> in the Yang	
Drink	Point <i>Jing</i> in the Yin	
	Point <i>Shu</i> in the Yang	

THE MORE BALD DIAMOND

Thus we have,

- on the one hand, ten components/meridians (Yin and Yang) in relation to the 5 Elements,
- on the other hand five points, each linked to an element, *Jīng – Yīng – Shu – Jīng (King) – He*, on each meridian¹¹⁰.

As a result, the energy circulation cycle in the 5 Elements, made up of ten phases of 2h24' each, is multiplied five times and there will be, in this circadian cycle, 50 phases of 28'48" each¹¹¹, or five cycles of ten phases over 24 hours:

1st Fire cycle = 10 phases corresponding to the passage of energy through the 10 Fire points of the 5 components/meridians (Elements) Yin and the 5 components/meridians (Elements) Yang

2nd Earth cycle = 10 phases corresponding to the passage of energy through the 10 Earth points of the 5 components/meridians (Elements) Yin and the 5 components/meridians (Elements) Yang

3rd cycle Metal = 10 phases corresponding to the passage of energy through the 10 Metal points of the 5 components/meridians (Elements) Yin and the 5 components/meridians (Elements) Yang

4th Water cycle = 10 phases corresponding to the passage of energy through the 10 Water points of the 5 com

¹¹⁰ One does not take into account the *Yuan* points of Yang, in double with the *He* points in Earth.

¹¹¹ $10 \text{ phases} \times 5 = 50$ and $24/50 = 28'48''$, which corresponds exactly to traditional data.

THE MORE BALD DIAMOND

components/meridians (Elements) Yin and of the 5
components/meridians (Elements) Yang

5th Wood cycle = 10 phases corresponding to the
passage of energy through the 10 Wood points of the 5
components/meridians (Elements) Yin and the 5
components/meridians (Elements) Yang.

Several remarks are in order:

As well in the 5 Elements as in the 6 Qualities, the
energy penetrates at the same moment and thus at the
same time in P (Lungs) only at 3 o'clock in the morning.
The 50 phases are therefore organized according to this
precise time.

It should be noted that in the circulation of energy
according to the 50 phases that we have just defined, it
is at the level of the *He* point that this penetration into P
(Lungs) takes place and we remember the meaning of
this point: "energy that penetrates, where it enters, like
water that unites with the sea".

The 50 phases of 28'48" constitute as a whole the
most important cycle from the point of view of the
circadian circulation of energy, since it connects the
internal and external functions which thus find their unity.

Is it necessary to remember that we must take into account local solar time and not legal time?

15. Periodicities and regulation

The appearance of beings and things is the envelope, the skin, the periphery, but their reality, their truth, I can only find in the centre, inside this envelope; I can only discover it in what I could imagine when, contemplating a diamond, I tried to grasp its "raison d'être", its inner life. Its centers and its internal currents then became as familiar to me as its external radiance, which is only its reflection.

Life is at the center, and it is only from this center that I can hope to approach it, to understand it. But imagining is insufficient, because the imagination carries within it the germ of error, the risk of straying into paths without real consistency. However, if my intuitions are correct, then I must verify them, demonstrate them.

The center is an "unknown", since I cannot see it, having only its periphery, its nadir, its zenith, and its four cardinal points, its four orients, to locate it. He is the unknown in a mathematical equation that I can therefore solve if I find the simple and direct way that should guide me to him.

It is towards this progressive discovery of the center of beings and things that the mutations of the I Ching carry me away, if I know how, here again, to look at and grasp the relations which unite the center and the periphery.

Perhaps this "mathematics" is not very classic, academic, but it is simple

THE MORE BALD DIAMOND

since it is based on the primordial law of polarization which goes from one and two up to sixty-four... or two hundred and sixteen!... but also from three which is its corollary, up to one hundred and twenty-five ...or three hundred and forty-three!...

The "5 Elements of the Earth" and the 16 Series of Yi King

The energy of the Earth is Yin, that of the Sky, Yang, . To study all the possibilities of relations, if these two energies do not "meet", in other words, to make them play together. It is relatively simple to note that there are first of all two possibilities: the first, when the energy of Heaven begins to manifest but the energy of Earth is still present, it is Yang, Heaven, surmounted by Yin, the; the second possibility, when the energy of Earth, the Earth begins to manifest but the energy of Heaven has not yet disappeared, it is Yin, the

== Earth, on mounted Yang, the Sky,

== .

However, these are only intermediaries, the first indicating the rise of light, dawn, in the east, the second, the rise of darkness, twilight, in the west. The extremes, light and darkness, are then defined by two superimposed Yang lines, light, and two superimposed Yin lines, darkness.

== ,

These four mutations, (22 = 4) thus define the two extremes, north, T2, and south, A2, and the intermediates, east, C, and west, G,

== ,

THE MORE BALD DIAMOND

☯ , in other words, on another level, the four fundamental energies, transcendent, alimentary, combustion and genetic.

Nevertheless, if these mutations take place between the nadir and the zenith, it is from the center, according to which only all the orientations are defined. This brings me back to the first notion that between the nadir and the zenith, between the Earth and the Sky, between the core and the skin, there is the "center", the manifestation, the pulp of the fruit. How to discover the genesis of this manifestation, if not by considering these three terms, "Earth, Sky, Center", or core, skin and pulp.

"Earth" and "Heaven", I know them, they are the Yin and Yang energies, analogous to the two monograms, and I also discovered all the relations which unite them by defining the four fundamental energies in relation to the four orientations and the four bigrams. The "Center" is therefore the unknown in this equation. To define it in turn, I have to make it meet the two known energies, in other words, I have to make them play together, all three. If I call the Yin energy, T, and the Yang energy, A, and finally if I name the unknown, the center, **○** — and these are curiously the three letters of the **TAO**

who play together — nine mutations appear ($3^2 = 9$); reading from bottom to top:

**TOATOATO
TTTOOOAAAA**

To understand how the center appears, manifests itself, that is to say, to define the genesis of

THE MORE BALD DIAMOND

manifestation, between Heaven and Earth, it only remains for me to give a value T or A to the unknown O, and this taking into account the laws of "generation" that I know (Pl. 26, fig. 1) ._____

The four doublets, TT, AT, AA, TA, are to be ruled out immediately, since they correspond respectively to the known energies of the north, the east, the south, and the west.

There are five mutations left, **TO, OT, OO, OA, AO**.

Let us remember that traditionally life comes from the center, from the darkness of death, from the nadir and from the north, through the east.

Coming from the center, the doublet **OT** is formed with **O** lower and upper **T**, which marks the appearance of the center O, in surface T. This doublet will take the value **AT**, rise of the light, of the life, in the east. It is the germination of spring, the Wood Element.

The ascension continues and with **AO**, superficial, the surface energy **A** occupying the lower place, therefore manifesting to support O, coming from the center, I will have the value **AA**, maximum life and light. It is the blossoming of the Fire Element.

Having reached the maximum of Yang, there is therefore an inversion of polarity and passage through the center of the circumference where I necessarily encounter the unknown, **OO**. This can then only take the inverse value, **TT**, value of the central Element, energy of the Earth, of the Earth

Arrived at the maximum of Yin, with the two superimposed Yin traits of **TT**, Element Earth, a new

THE MORE BALD DIAMOND

inversion of polarity is essential to find Yang. As one comes from the center, the doublet **OA**, with **O** lower, will take the value **TA**, rise of ~~darkness~~ darkness, of death, in the west. It is the decay of autumn, the oxidation, the rusting of metal, the Metal Element.

There remains only the doublet **TO** which then takes the value **ET**, ~~that of darkness, of death, of the~~ it is also from it that the life of spring will be able to manifest itself again, as life manifested itself on Earth from the water of the oceans; it is the Water Element.

Thus, the center, the pulp, the manifestation, between Earth and Heaven, appears according to the four cardinal points, plus the center itself, in the order, East, South, Center, West, North, in other words Elements Wood, Fire, Earth, Metal, Water. It is the cycle of generation of the "5 Elements of the Earth", the *Sheng cycle*, which is found analogously in the organism with the cycle of the five internal functions reacting on each other: locomotor function - blood - ner bladder -respiratory -osseous (Pl. 26, fig 2).

However, the Earth, in the center, is defined by two Yin traits, like Water, in the periphery; the Earth is in a way the opposite of Water, it is its Master, it is stronger than it since it is central, it is victorious over it, it inhibits it. In turn, Water with its two Yin traits is the opposite of Fire and its two Yang traits, it is victorious over it, inhibits it. Fire itself, Yang, in turn inhibits Metal, the last Yin-based term. Finally, Metal inhibits Wood,

THE MORE BALD DIAMOND

its reverse. Wood, the last Element of this series, then inhibits the first, Earth, is victorious.

We will say that the Earth absorbs the Water, that the Water extinguishes the Fire, that the Fire melts the Metal, that the Metal cuts the Wood... and that the Wood feeds on the Earth... This is the cycle of "victory". », the *Ke cycle*, cycle of inhibition of the 5 Elements of the Earth, but also analogically of the five internal functions of the organism, represented by the five-pointed star (Pl. 26, fig. 2).

The two cycles of "victory" *Ke* and "generation" *Sheng* therefore complement each other and thus give movement, life. The Earth inhibits the Water, is victorious over it, and the latter is obliged to transmit the energy that it cannot use: the Water thus generates the Wood. Wood, in turn, inhibits Earth, which generates Metal; it will be said that the "son" avenges his "mother", that Wood, son of Water, his mother, avenges her by inhibiting the Earth which had attacked her, which wanted to submit her... But the Earth in turn gives birth the Metal, it generates it, and the Metal then inhibits the Wood, which causes the generation of Fire...

It is the same in the organism where the nerve function, the energy of the nerve function, inhibits the bone function, inhibits its energy, which generates the energy of the locomotor function... This inhibits the nerve function, thus causing the generation of respiratory function and so on...

THE MORE BALD DIAMOND

Fig. 1

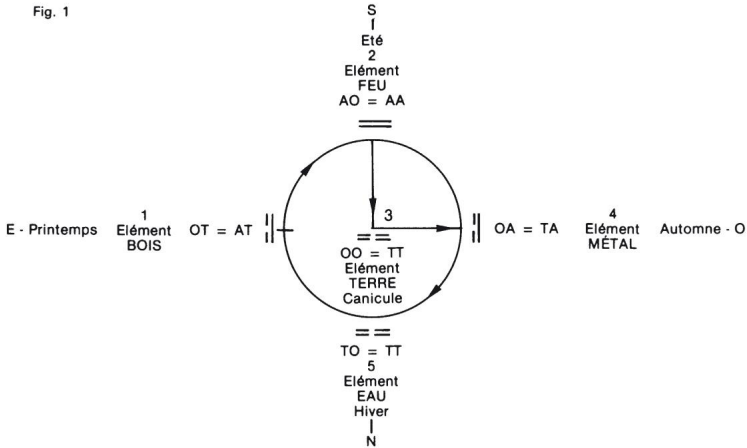

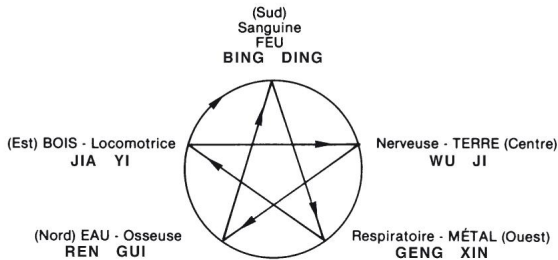

Fig. 2

Board 26

The 5 Elements of the Earth and analogically the five internal functions can only be defined, each in their unity, according to their Yin and Yang aspects. Also, in Chinese cosmogony, we will speak of the ten "Heavenly Trunks", the " *Tian Gan* ", the ten terrestrial energies, polarized energies of the 5 Elements:

THE MORE BALD DIAMOND

<i>Yia</i> , Yang energy of Wood	<i>Yi</i> , Yin energy of Wood
<i>Bing</i> , Yang energy of Fire	<i>Ding</i> , Yin energy of Fire
<i>Wu</i> , Yang energy of Earth <i>Ji</i> , Yin energy of Earth	
<i>Geng</i> , Yang energy of Metal <i>Xin</i> , Yin energy of Metal	
<i>Ren</i> , Yang energy of Water	<i>Gui</i> , Yin energy of Water

We have just defined the Earth Element, the center, and the Water Element, in the north, in the **==** · same way, **TT**, It is now a question of differentiating them one from the other. How does the center of the four "orients" manifest? The method to be used will be the same, but this time with four known energies, that of the north, of Water, **T2**, transcendent energy, that of the east, of Wood, **C**, combustion energy, that of the south, Fire, **A2**, food energy, finally that of the west, Metal, **G**, genetic energy, and an unknown, the "center", Earth, **O**.

But first, let's quickly see the laws of periodic structure.

Laws of periodic structuring and ciphering

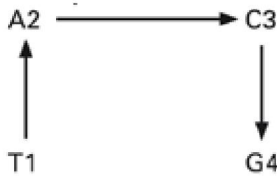

From the center **T**, we discovered with the *He Tu* that the successive polarizations take place in the order:

- **T**
- 1st polarization, encryption:
 - 1 = **T1**
 - 2 = **A1**

THE MORE BALD DIAMOND

- 2nd polarization, encryption:
 - 1 = **T2**
 - 2 = **A2**
 - 3 = **C**
 - 4 = **G**

In schematic form, we have the following:

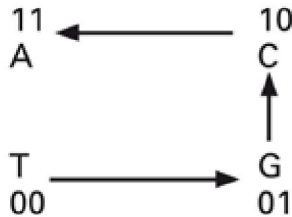

The structuring of Yin to Yang shows that the order of the bigrams defining the four quadrants in the Yi King, reverses the direction of this sequence. We then find, again from **T**, the following :

TGCA

Indeed, if we consider the binary value of each of the radicals/energies, by giving the value 0 to — —, Yin, and the value 1 to ———, Yang:

T2 =	==	00 (start of encryption cycle)
G =	==	01 (end of encryption cycle)
C =	==	10 (inverse of G)
A2 =	==	11 (inverse of T)

Schematically, according to the binary value:

THE MORE BALD DIAMOND

If we study the mutations of the four energies by "doublets" (2 superimposed bigrams), the four quadrants will successively fill in order (lower bigrams) from Yin to Yang:

1 – T
2 – G
3-C
4-A

It is through these four quadrants that the center, T, can gradually manifest, since it is from it that the energies are generated. But, the center, T, is the Earth element, in relation with the four Elements Wood – Fire – Metal – Water, in other words, in order,

C-A-G-T.

The upper line of doublets (upper bigrams) will therefore be structured according to the order of generation of the 5 Elements. We have seen, with the *He Tu*, that in this generation of the 5 Elements, the center T (or O for more convenience) appears as the Earth Element according to the following:

Wood-Fire-Earth-Metal-Water

Indeed, if the generation is indeed carried out from Water, it is through the intermediary of Wood (G", figure 8 in the *He Tu*) and it is therefore Wood that must be considered as the beginning of the generation cycle.

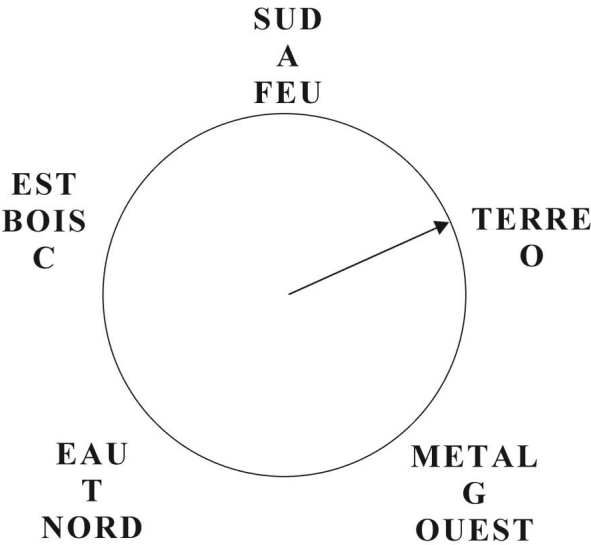

This gives us the following:

CAOGT

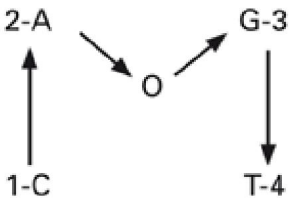

THE MORE BALD DIAMOND

Indeed, we remember that

Drink	= East	= C
Fire	= South	= A
Earth	= Center = O	
Metal = West		= G
Water	= North	= T

Schematically, we have the following

However, in the doublets , the structuring of the base (lower bigram) was defined according to a

THE MORE BALD DIAMOND

reverse order of the polarization order (**TGCA** instead of TACG).

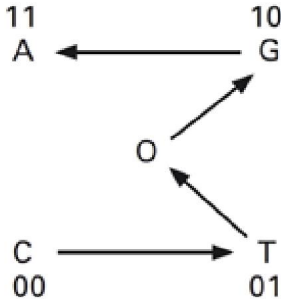

As a result, the higher bigrams will therefore also be structured in an inverse order to that of generation of the 5 Elements: **CTGA** instead of CAGT. Indeed, their value has been reversed:

1 – C, beginning of cycle, took the value	=	==	00 – (Wood)
2 – A, took the opposite value	=	===	11 – (Fire)
3 – G, took the value C in the Yi king	=	==	10 – (Metal)
4 – T, end of cycle, has taken the inverse value of the previous one	=	==	01 – (Water)

That is to say that, always from C, Bois, we will have the following:

CT-(O)-GA

Schematically:

Indeed, we cannot have the sequence, exact inverse of the previous one, i.e. in CTGOA order:

- after T, Water (numbered 1 in the *He Tu*) and in the dextrogyre direction, the opposite direction of generation, there is center (Earth), and the continuation is obligatorily **CTOG A**.
- **T** center – Earth has a value of 0 zero, and is located

THE MORE BALD DIAMOND

naturally between T, 01 (negative value or yin) and G, 10 (positive value or yang).

- Earth, O, remains at the center of the 4 radicals/elements.

If we study the mutations of the four energies by "triplets" (3 superimposed bigrams), the four quadrants (lower bigrams) will be filled in the order of generation of the 5 Elements, that is to say CA-(O)-GT (Wood-Fire-Earth-Metal-Water).

Indeed, it is through the intermediary of the doublets defining 16 series from the four fundamental energies, that the center, Earth, and thereby the 5 Elements have manifested themselves by relying on the reverse order. of the polarization, applied to the four lower radicals of these doublets.

The triplets, defining 64 mutations, and therefore being an extension of the previous system, necessarily have as their basis (lower bigrams) the order of generation of the 5 Elements.

The bigrams of the two upper lines will be structured, as we have seen above, in the reverse order of the order of generation of the 5 Elements, given the binary value they have acquired:

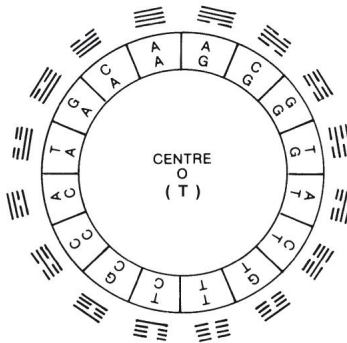

vs	=	==	00
T	=	==	01
(O)			
G =		==	10
To =		==	11

THE MORE BALD DIAMOND

16 and 25 mutations (doublets):

16 series = 7 “little inn” and 7 “little yang” + 2 ambivalent

Let us first consider the two lower bigrams (tetragrams) of each of the 64 hexagrams, in other words, the play by doublets of the four **TGCA energies**, defining the 16 series of the I Ching (42 = 16 mutations) and thereby a system energy theme.

These 16 series are like a palisade around a village which would constitute its center; they are the external appearance of a system of which we do not know the interior, the center **T**, which they hide from us. For convenience, we will define this center **T** by the radical **O**. We thus have an equation with one unknown: 16 doublets of which we know the order of structuring (defined at the beginning of this chapter), from the four energies **TGCA** and an **O** center, invisible from the outside

If we want to show the center **O** and its different unknown aspects using the same form

THE MORE BALD DIAMOND

of doublets, we then find a total of 25 mutations¹¹² (52 = 25). Of these 25 mutations:

- 16 contain only **TGCA** radicals
- 9 contain the unknown radical **O**

Thus the center, considered as a complete energetic system with 16 components/doublets, can only manifest itself through the intermediary of 9 doublets, which therefore represent its external function, 7 doublets of internal function still remaining veiled.

Let's take our image of the village surrounded by a palisade, number the posts of this palisade, from 1 to 16, and look at the center.

Nine houses appear, but these nine houses are still a veil, a new palisade around the deepest reality; they are its external function, its appearance, its illusion. Life is inside these houses. The value of this life, internal function, is given to us by the difference between sixteen - definition of a complete energy system - and nine - external function of an identical energy system - that is to say seven.

By giving the radical **O** of each of these nine doublets a value **TG C.** or **A.** depending on the order of structuring of the lower and upper radicals of these doublets, we then find the following values:

TT – TG – TA – GT – GC – CT – CA – AT – AC

¹¹² See [pl. 27](#), fig 1.

¹¹³ See [pl. 27](#), fig 2.

THE MORE BALD DIAMOND

In other words, since we have seen that the 16 series of the I Ching were defined by the two lower bigrams of the hexagrams, the external function of the center corresponds to the series:

TT	TG	TA	GT	GC	CT	CA	AT	AC				
1	2			4		5		7	9	12	13	15

Consequently, the internal function of the center is represented by the seven series which could not appear:

TC	GG	GA	CG	CC	AG	AA			
3		6		8	10	11	14	16	

It remains for us to demonstrate it, in fact much simpler than the one I developed in 1973.

Demonstration

At the time, to find out what the 9 external “little inn” series and the 7 internal “little yang” series consisted of, I had given priority to a demonstration calling on the yin or yang values of each of the lines of the 16 tetragrams, then to a second resulting from the ordering of the 9 series comprising the unknown O. And that's where I masterfully planted myself! This is all the better because when I read Jacques Monod's book, *Le Chance et la Nécessité*, I thought I understood that the distribution of the 20 hydrophilic and hydrophobic amino acids, analogues of the meridians and the organs generated from these series, confirmed this vision.

THE MORE BALD DIAMOND

It is by studying in particular the gene for P 53, an anti-oncogene protein, in analogy with the Chinese energetic tick, that certain anomalies have appeared, on several occasions, between the mutations occurring in this gene and pathologies precise. In particular, Lysine (amino acid) should have had the Liver (function/organ) as an analogue, whereas the decoding, linked to the definition of the “little inn” and “little yang” series, made it correspond to the Lungs (function/organ). /organ).

I therefore took the recent tables concerning hydrophilic and hydrophobic amino acids, and there appeared fundamental differences with the previous data, with regard to four amino acids¹¹⁴ :

- Glycine, at the equilibrium point, was to be considered hydrophilic and not hydrophobic, in series 6.
- Proline, also at the equilibrium point, was also to be considered hydrophilic and not hydrophobic, in series 11.
- Histidine was hydrophobic and not hydrophilic, in series 12.
- (Glutamine remained hydrophilic in this same series 12).
- Threonine was hydrophobic and not hydrophilic, in series 15.

This meant that the 16 series were generally presented as follows:

¹¹⁴ See chap. 29, [pl. 104](#): *DNA and I Ching*.

THE MORE BALD DIAMOND

- 9 hydrophobic “small inn” series of external function:

TT TG	TA GT	GC CT	CA AT	AC				
1	2	4	5	7	9	12	13	15

- 7 hydrophilic “little yang” series of internal function:

TC GG	GA CG	CC AG	AA			
3	6	8	10	11	14	16

However, series 4 and 12, although appearing on the surface, are mixed, since in each of them coexist two triplets/hexagrams coding for hydrophobic amino acids or meridians, and two coding for hydrophilic amino acids or organs:

In series 4: TAT	and TAC encode Tyrosine, hydrophobic
	TAG and TAA are “Non Sens” with access to the hydrophilic type center)
In series 12: CAT	and CAC code for Histidine, hydrophobic
	CAG and CAA code for Glutamine, hydrophilic

We will come back to these particular aspects during the demonstration that follows.

Demonstration according to the *He Tu*

For this demonstration, the simple traditional ciphering of the *He Tu* provides an ideal solution. It should be noted that, according to the periodicities of the 25 mutations, the 9 doublets comprising the unknown O, appear as follows (reading from bottom to top)¹¹⁵

¹¹⁵ See [pl. 27](#), fig. 1.

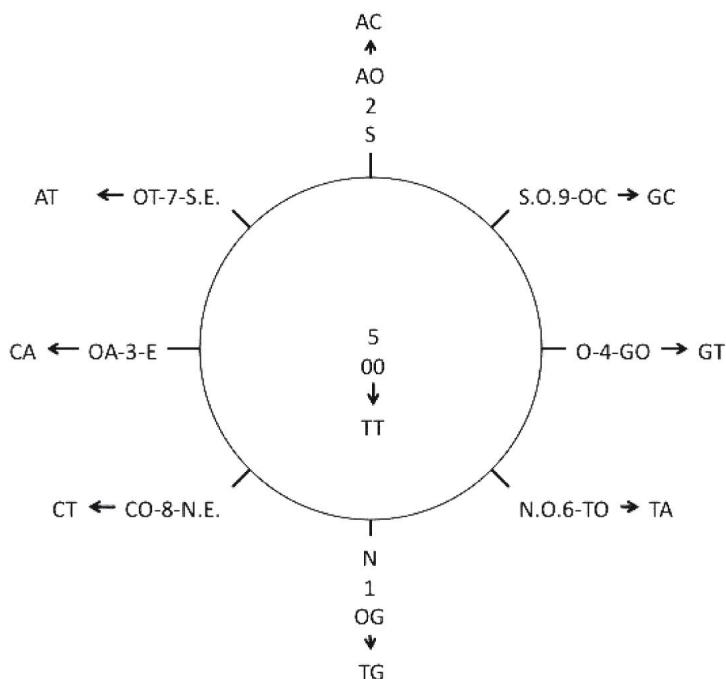

THE MORE BALD DIAMOND

OOTGOCAOO
TG00000CA

Note also that the four **TACG energies**, analogous to the elements Water, Fire, Wood and Metal, define four quadrants corresponding respectively, according to tradition, to the orientations North and North-West, South and South-East, East and North-East, West and Southwest; the radical **O** or **T** corresponds, in addition, to the Center, element Earth.

THE MORE BALD DIAMOND

He Tu: Prior Heaven

Finally, on the oriented circumference, there again, according to the Tradition, with the South (S) at the top, the ciphering of the *He Tu*: 1 in the north, 2 in the south, 3 in the east, 4 in the west, 5 center, 6 northwest, 7 southeast, 8 northeast, 9 southwest. It only remains for us to strictly follow this guide.

Let us note from the outset that **00**, the central unknown, will necessarily correspond, in the 5th time, to the value **TT** (maximum of yin).

- Let's start in 1, in the North: if we start with **OT**, the first theoretical contact between the center and the periphery, the only possibility, in this quadrant T, would be at

THE MORE BALD DIAMOND

new **TT**, which is impossible since **TT** is central. The beginning can therefore only be found with the following doublet, **OG**, which determines the **TG** value (we are in the T quadrant).

- In 2, to the South: diametrically opposed, coming from the deepest (with OG) we go to the most superficial, with **AO**, which determines the inverse doublet of the previous one (TG), that is to say **AC**.
- In 3, to the East: coming from the surface (with AO), we return to depth with, (following OG in 1), two possibilities, **OC** or **OA** ; but since we are in the most yang area of quadrant C, **OA** imposes itself and determines the **CA** doublet .
- In 4, to the West: diametrically opposed, coming from the deepest (with OA) we go to the most superficial, **GO**, which determines the inverse doublet of the previous one (CA), that is to say **GT**.
- In 5, at the Center: as we specified above, **OO** determines the doublet **TT**.
- In 6, to the North-West: last series in quadrant T, coming from the deepest (with OO) we go to the most superficial, only possibility for this quadrant, **TO**, which determines the doublet **TA**, since we are in the zone the most yang of this quadrant.
- In 7, in the Southeast: diametrically opposed, in quadrant A, coming from the most superficial (with TO) we go to the deepest with, (following OA in 3) two possibilities, **OT** or **OC**; but as we are in the most yin zone of quadrant A, **OT** imposes itself and determines the doublet, inverse of the previous one (TA), that is to say **AT**.
- In 8, to the North-East: last series in quadrant C, coming from the deepest (OT) we go to the most superficial with **CO**; as we are in the most yin zone of this quadrant, **CO** necessarily determines the doublet **CT**.

THE MORE BALD DIAMOND

- In 9, to the South-West: diametrically opposed, in quadrant G, coming from the most superficial (with CO) we go to the deepest with **OC**, last doublet available, which automatically determines the doublet **GC**.

The 9 “petit inn” series – hydrophobic, functional external – in the Yi King are therefore the series:

TT	TG	TA	GT	GC	CT	CA	AT	AC				
1	2		4		5		7		9	12	13	15

For their part, the 7 hydrophilic “little yang” series of internal function in the I Ching are therefore the series, complementary to the previous ones:

TC	GG	GA	CG	CC	AG	AA			
3	6		8		10		11	14	16

Recall that the two series appearing as “small inn”, series 4 **TA** and 12 **CA** (upper radical **A**, with the 2 yang lines of their tetragrams), are the most yang possible, respectively in quadrant **T** and quadrant **C**. Two of their hexagrams have, as such, a “little inn” orientation, the other two have a “little yang” orientation:

- In series 4: **TAT-TAC**, “little inn”, hydrophobic, and Center-related **TAG and TAA** (with a “little yang” character, hydrophilic) as “Non-Sense”.¹¹⁶
- In series 12: **CAT** and **CAC**, “little inn”, hydrophobic, **CAG** and **CAA**, “little yang”, hydrophilic.¹¹⁷

¹¹⁶ See 64 and 125 mutations

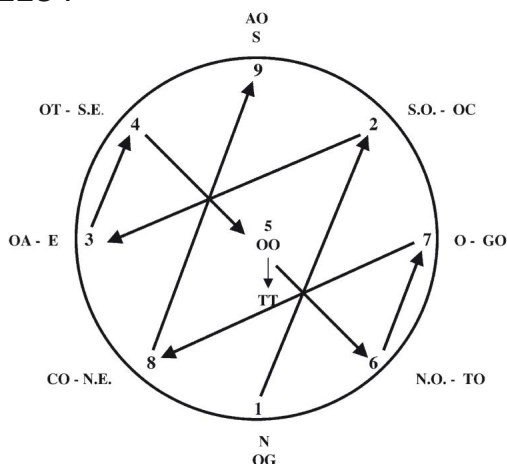

¹¹⁷ See chap. 29: *The DNA double helix*.

THE MORE BALD DIAMOND

Ultimately, there are therefore 7 "little inn" hydrophobic series and 7 "little yang" hydrophilic series, plus two ambivalent series, which make up the 16 Yi King series.

According to the Lo Shu

Note, for specialists of the Prior Heaven (*He Tu*) and the Later Sky (*Lo Shu*), that the series of 9 basic doublets **transferred to the He Tu** is particularly instructive: taking as a starting point the doublet **OG** (he determined the value **TG**, series 2 at the Nord) and the series comprising the **O** -based doublets (in the order **OG-OC-OA-OT-OO**), then the series comprising the doublets based on T, G, C or A (in the order **TO-GO-CO-AO**), this series of 9 doublets gives the key to the cycle of orientation and traditional encryption of the *Lo Shu*¹¹⁸ :

¹¹⁸ It is from this peripheral manifestation of the energies generated by the anterior Heaven that the cycle of victory begins, the destruction in the posterior Heaven.

THE MORE BALD DIAMOND

in 1, located to the North:	OG (TG) ☰☷	series 2	hey you ☰☷
in 2, located to the South-West: OC (GC)	☰☷	series 7	hey you ☰☷
in 3, located to the East:	OA (AC) ☰☷	series 12 He Tu	☰☷
in 4, located to the South-East:	OT (AT) ☰☷	series 13 He Tu	☰☷
in 5, located in the Center:	OO (TT) ☰☷	center	
in 6, located to the North-West: TO (TA)	☰☷	series 4	hey you ☰☷

in 8, located to the North-East:	CO (CT) ☰☷	series 9	hey you ☰☷
in 9, located to the South:	AO (AC) ☰☷	series 15 He Tu	☰☷

Lo Shu: Posterior Sky

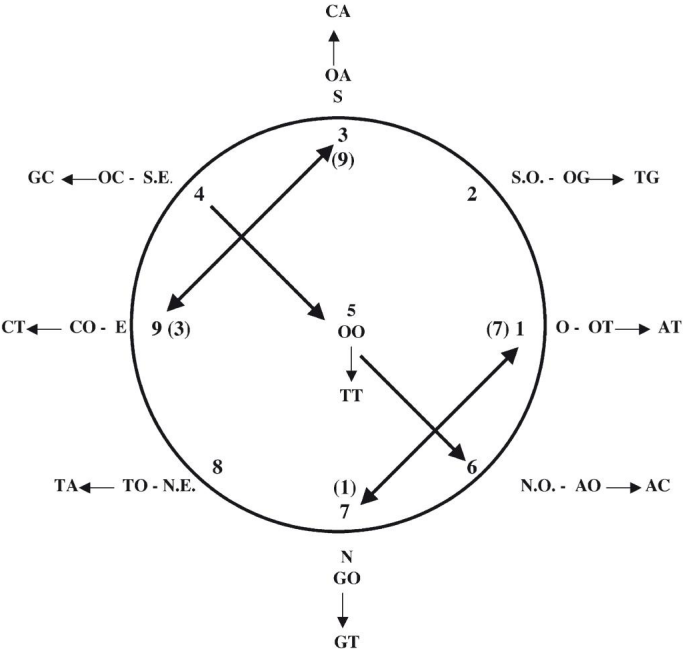

However, the cycle of *Lo Shu* or Later Heaven, *Hou Tian*, is a cycle of destruction, following and direct consequence of *He Tu*, Prior Heaven, *Xian Tian*.

THE MORE BALD DIAMOND

The positioning of the 9 doublets comprising the unknown **O** and their decoding (invariable) will, in this case, be carried out from the West, in the opposite direction of the hands of a watch (dextrogyre) and of the four quadrants of the *He Tu*, i.e. in the order north, west, south, east (**TGAC**), first with the four doublets “central”:

1 West:	OT , AT decoding	☰☰	<i>Lo Shu</i> ☳☳	numeral 7
2 Southwest: OG , TG decoding		☳☳	<i>Lo Shu</i> ☰☰	encrypted 2
3 In the South:	OA , CA decoding	☳☳	<i>Lo Shu</i> ☳☳	number 9
4 Southeast:	OC , GC decoding	☳☳	<i>Lo Shu</i> ☳☳	cipher 4

Then pass through the center, in 5: OO, TT decoding,

THE MORE BALD DIAMOND

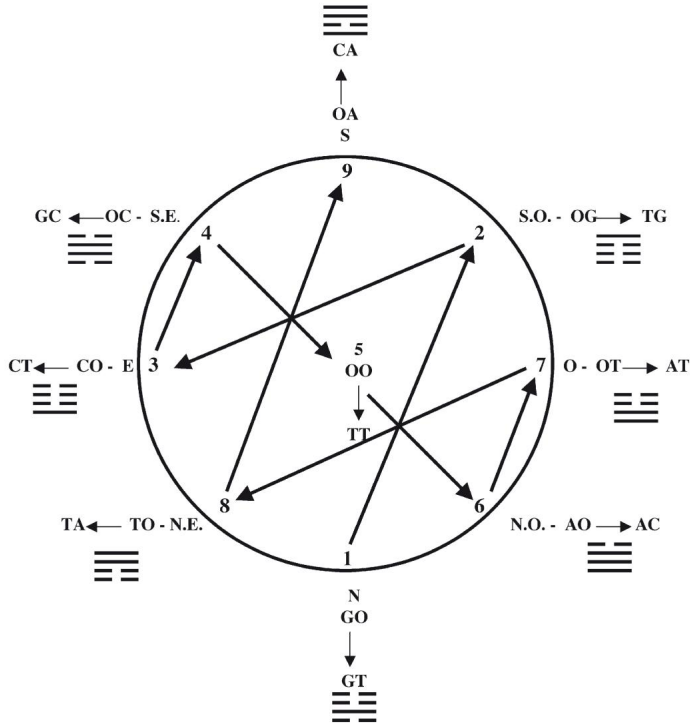

☰☰ , to arrive at the four peripheral doublets, with (because of the passage from the upper line of the bigrams to their lower line) a double inversion, of their direction of reading (senestrogyre instead of dextrogyre) and of the direction of unwinding of their place ment (**AGTC** instead of TGAC)119 :

6 Northwest: AO, AC decoding		☰☰	<i>Lo Shu</i> ☰☰	cipher 6
7 North:	GO, GT decoding	☰☰	<i>Lo Shu</i> ☰☰	encrypted 1
8 Northeast:	TO, TA decoding	☰☰	<i>Lo Shu</i> ☰☰	numeral 8
9 East:	CO, CT decoding	☰☰	<i>Lo Shu</i> ☰☰	number 3

Given the location of each of the 8 corresponding tetragrams (and their basic trigram), the ciphering and reading are carried out from Yin to Yang, from Water, *Kan*, in the North, in ~~first~~ position, to end in the South, with the Fire, *Li*, ☰ in last position. From the ciphering above, the number 1 then takes the place of the number 7 and vice versa, the number 9 acting in the same way with the 3 (only the numbers are mutated), which, while giving us the definitive ciphering of *Lo Shu* reading , defines the magic square traditionally called the square of Saturn in which the horizontal, vertical and diagonal additions always give the number 15.

119 For the central doublets, we started from T; we now start from A, its inverse.

THE MORE BALD DIAMOND

in 1, in the North, GO gives GT,	base, ☵ the unfathomable -Water
in 2, to the South-West, OG gives TG, base,	☷ the receptive-the Earth

in 9, in the South, OA gives CA,	base, ☲ what clings - the Fire

THE MORE BALD DIAMOND

The 6 “Qualities of Heaven” and the 16 mutations

Between the Earth and the Sky, between the nadir and the zenith, there is the center, I have just studied it or at least studied one of its aspects. Indeed, I can also consider the center, the unknown, according to its definition as a "polarizable" unit, for example in **X** and **Y**, included between two known energies, , Yin, and Sky, **A**, Earth, **T**, , Yang.

— —

— —

By bringing these four energies into play two by two, 16 mutations can then occur ($42 = 16$), of which four are known to me:

TT-AA-AT-TA, the four fundamental energies, or energies of the north, the south, the east and the west¹²⁰.

The other twelve mutations have the unknowns **X** and **Y**. If I give **X** the value **T** and **Y** the value **A**, these mutations break down as follows (*reading bottom line to top line*):

XYXY TAAT	given	TATA in other words, TAAT North-South-East-West
TATA YYYY	given	TATA in other words, TAAT North-South-East-West
XYXY YYYY	given	TATA in other words, TAAT North-South-East-West

I thus find three times the same series of four doublets, but

- The first series is related to the surface: the energies **T** and **A**, known, are peripheral energies with respect to the center (**X** and **Y**), and they

¹²⁰ In other words, energies T2, A2, C and G.

THE MORE BALD DIAMOND

require each doublet of this series since they form the lower line, the line "of what is rising", of what is increasing, of what is the support

- The second series is intermediate, median, with known energies, **T** and **A**, in each doublet, the unknown energies, **X** and **Y**, lower, controlling each of these doublets
- The third series is in intimate relation with the depth, the center itself, since it only includes the unknown energies, coming from the center, **X** and **Y**.

It is "as if" each of the three Hearths, superior, median and inferior, were defined according to the four orients, in other words the periphery, and not the center which does not appear as a unit.

This is quite normal, since it is from the "polarized" center that the four fundamental energies which are found in the "three Hearths", can play with each other; they only define the periphery of each of them.

Each Hearth being defined by four energies, complementary two by two, north-south, TT -AA, the extremes on the one hand, and east-west, AT -TA, the intermediaries on the other hand, and these four energies being peripheral , as energies of Heaven, there are then six aspects or "6 Qualities of Heaven" which appear: (pl. 28, fig. 1)

- in area, Upper hearth (FS)

Great Yin: TT (TX) and AA (AY) = <i>Tai Yin</i>	
Great Yang: AT (AX) and TA (TY) = <i>Tai Yang</i>	

THE MORE BALD DIAMOND

- in the middle, Median Focus (FM)

Middle Yin:	TT (XT) and AA (YA) = <i>Shao Yin</i>
Middle Yang: AT (YT) and TA (XA) = <i>Shao Yang</i>	

- in depth, lower focus (FI)

Lower Yin: TT (XX) and AA (YY) = <i>Jue Yin</i>	
Lower Yang: AT (YX) and TA (XY) = <i>Yang Ming</i>	

Thus, the polarized center, the pulp, the manifestation, between Heaven and Earth, appears according to the three Hearths, the three axes of space and their six extreme, celestial points, the 6 qualities of Heaven:

- On the surface, the great Yin (*Tai Yin*) is the dew of the Earth which comes to it from Heaven, it is humidity. The great Yang (*Tai Yang*) is the cold of Heaven, produced by water, by humidity, it is cold.
- In the middle, the middle Yin (*Shao Yin*), it is the central fire of the Earth which comes to it from the sun, it is the fire which irradiates. The middle Yang (*Shao Yang*) is the heat of Heaven released by the fire, it is the depression it produces.
- In depth, the lower Yin (*Jue Yin*), it is the central pressure of the Earth which comes to it from the wind of Heaven, it is the “*feng*”, the pressure. The lower Yang (*Yang Ming*), brilliant Yang, is the lack of water, the dryness of the Sky caused by the wind, the pressure, it is the dryness.

THE MORE BALD DIAMOND

However, if cold is produced by humidity, heat by fire, dryness by wind, let us recall, at the risk of repeating ourselves, that there also exists a complementarity, Yin-Yang, between these Qualities, two by two:

- Humidity is the quality of a hydrophilic structure, Yang, contracted, and which therefore tends to become waterlogged; the energy of humidity is therefore Yin, dilator: it is the great Yin, *Tai Yin*.
- Dryness is the quality of a hydrophobic structure, Yin, dilated, and which therefore tends to drive out water; the energy of dryness is therefore Yang, constrictor: it is the lower Yang, *Yang Ming*.
- Fire is the quality of a calcining structure, Yang, contracted; the energy of fire is therefore Yin: it is the middle Yin, *Shao Yin*.
- Cold is the quality of a freezing structure, Yin, dilated; the energy of the cold is therefore Yang: it is the great Yang, *Tai Yang*.
- The wind is the quality of a structure in compression, Yang, contracted; the energy of the pressure, of the wind, of the *Feng*, is therefore Yin: it is the lower Yin, *Jue Yin*.
- Heat is the quality of a structure in depression, Yin, dilated; the energy of the depression, of the heat, is therefore Yang: it is the middle Yang, *Shao Yang*.

These "6 Qualities of Heaven", these six external functions, can only be defined, each one, in their unity, according to their Yin and Yang aspects. Also, in Chinese cosmogony, we will speak of the 12 "Terrestrial Branches", the celestial energies, the "*Di Zhi*", polarizations of the energies of the 6 Qualities, external antennas of the 5 Elements, whose organization is a t

THE MORE BALD DIAMOND

their complementarities and their oppositions (Pl. 28, fig. 2):

<i>Wu</i>	Quality Fire,	antenna of the Yin Fire Element	
<i>Wei</i>	cold quality,	antenna of the Yang Fire Element	
<i>Shen</i>	Cold Quality,	antenna of the Yang Water Element	
<i>Yu</i>	Fire Quality,	antenna of the Yin Water Element	
<i>Xu</i>	Quality Wind, Pressure,	antenna of	2nd Yin Fire
<i>Hai</i>	Quality Heat, Depression, Antenna		2nd Yang Fire
<i>Zi</i>	Quality Heat, Depression, Antenna	Wood Element Yang	
<i>Cabbage</i>	Quality Wind, Pressure,	antenna of the Yin Wood Element	
<i>yin</i>	Quality Humidity,	antenna of the Yin Metal Element	
<i>Mao</i>	Quality Drought,	antenna of the Yang Metal Element	
<i>Chen</i>	Quality Drought,	antenna of the Yang Earth Element	
<i>Yes</i>	Quality Humidity,	antenna of the Yin Earth Element	

We have just defined in a similar way, on the one hand the north and the south, the east and the west, with the known energies, **T** and **A**, and on the other hand the four orients and the 6 Qualities of Heaven, from the two unknowns of the polarized center, **X** and **Y**. It is now a matter of differentiating them from each other. How does the polarized center manifest as the center of the four orients?

It is still the same method, but this time with four known energies, those of the four orients, transcendent energy, **T**, comburent, **C**, food **A** and genetic **G121**, and two unknowns, those of the center polarized in **X** and **Y**.

¹²¹ **T**, **C**, **A** and **G** are, of course, simplifications of **T2**, **C**, **A2** and **G**.

THE MORE BALD DIAMOND

16 and 36 mutations (doublets) = 20 subdivisions

We have seen that the play of the four **TG CA** radicals of the four orients, by doublets, resulted in 16 mutations corresponding to the 16 series of the I Ching.

By showing the center, polarized in **X** and **Y**, in relation to **T, G, C** and **A**, we then obtain 36 mutations ($62 = 36$); on these 36 mutations (Pl. 29):

- 16 contain only **TGCA** radicals
- 20 contain the radicals **X** and **Y**.

It should be noted that of these last 20 mutations,

- 16 contain the radical **X** or **Y** with one of the four others,
- 4 contain only the radicals **X** and **Y**.

The center (**X** and **Y**) therefore manifests itself according to 20 mutations, that is four more than the periphery (16 mutations of **TGC** and **A**).

By giving the values **T** or **G** for **X** and **C** or **A** for **Y**, according to the order of structuring, one then finds the following values. (Plate 29)

THE MORE BALD DIAMOND

36 Mutations
fond trame = séries petit yang
fond blanc = séries petit inn

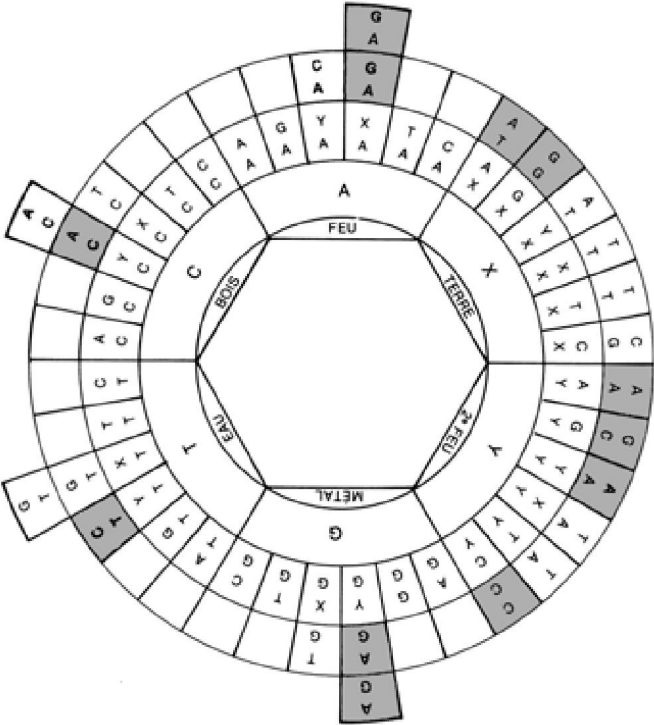

Plate 29

The sixteen doublets comprising the radical **X** or **Y** with one of the four others (TGC or A), correspond to the 16 series of the Yi King. In the order of structuring, we have:

THE MORE BALD DIAMOND

- “Small yang” series first, as a function, dilator, internal Yin

TC	TA	GG	GA	CG	CC	CA	AG	AA			
TY	XY	XG	GY	YG	YC	CY	AX	YA			

- Second “small inn” series as an external function Yang, constrictor,

TT	TG	TA	GT	GC	CT	CA	AT	AC			
XT	TX	XA	GX	XC	CX	CY	YT	AY			

But we know that the series 4, **TA** and 12, **CA**, each have two “little inn” hexagrams and two “little yang” hexagrams, because they are respectively at the maximum of yang in quadrant **T** as in quadrant C122.

The four doublets comprising only the radicals X and Y correspond to the two central radical energies (T and A), in their various mutations. These four series then have a double aspect, if we take into account the previous specifications:

TT for XX (and for XT)
TA for XY (and for XA)
AT for YX (and for YT)
AA for YY (and for YA)

However, from the generation according to the *He Tu* and the *I Ching*, we know that it is not 20, but 23 energies which are generated from the center and the 16 series.

122 See above the 16 series according to the *He Tu*

THE MORE BALD DIAMOND

Given the fact that series 4, **TA**, comprises two “nonsense” 123 hexagrams, there are ultimately 24 aspects that must intervene from the 16 basic series. Eight of these series therefore necessarily have a double aspect and eight a simple aspect ($16+8 = 24$).

We have just demonstrated that out of the 16 series of the I Ching, seven “little yang” have an internal function of dilation, and seven “little inn”, an external function of constriction; two series are ambivalent: series 4 **TA** and 12 **CA**, with, in each, two “little inn” and two “little yang” hexagrams.

It should be noted that, still from the I Ching, in the continuation of the “small inn” series, considered as an external yang, constricting function, the series 2 **TG** participates directly in the center, partly because of its position, in contact with general north, in quadrant T, and on the other hand of the presence of the hexagram TGA124. This series therefore also has a central, unique character, linked to the internal, yin, dilating function.

In internal yin function, small yang series, dilator, in addition to the unstructured Heart Master function, there are 11 components or energies. As we only have seven small yang series, to which we must add the small yang part of the 12 series, **CA**, as well as a second aspect in the

123 See below 125, 216, 49 and 343 mutations, and chap. 8: *The mutations of the I Ching*.

124 See chap. 8: *The mutations of the I Ching*.

THE MORE BALD DIAMOND

series 16, **AA** (double from YA and YY), it is obvious that two more series must have a double aspect.

We then find, in order,

Series 3 TC for TY a single aspect		Rt
4 TA series for XA and XY a small yang/2 NS-MC aspect		
Series 6 GG for XG	one aspect	R
Series 8 GA for GY a double aspect		P.Gi
Series 10 CG for YG one aspect only		CR
Series 11 CC for YC single aspect		GI
Series 12 CA for CY a small yang/2V aspect		
Series 14 AG for AX a double aspect		AND F
Series 16 AA for YA and YY, so two aspects		VB. F

The **GA** (8) and **AG** (14) series coming from GY and AX, the most peripheral in each of the concerned quadrants, will have a double aspect, which brings the whole to a total of 12 potential aspects, including that concerning the Master of the Heart.

In external yang function, small inn series, constrictor, there are 12 components or energies, but here again there are only seven series. In addition, remember that the 4 **TA** and 12 **CA** series each have two “little inn” hexagrams and two “little yang” hexagrams. In addition, two aspects exist for each of the **TT** (double from XT and XX) and **AT** (double from YT and YX) series.

Another series must therefore have a double aspect. We then find in order:

THE MORE BALD DIAMOND

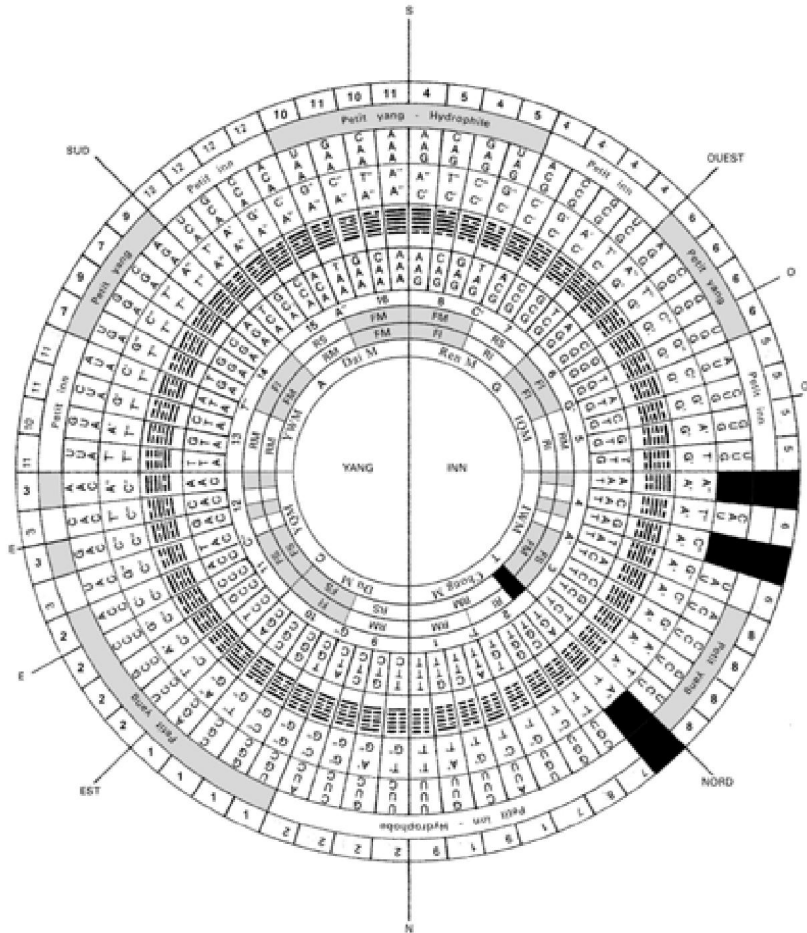

4 TA series for XA and XY a small inn/2 R appearance		
Series 2 TG for TX	a double aspect	E.MC
Series 1 TT for XT and XX so two aspects		Rt.Cr
Series 15 AC for AY	one aspect	F
Series 13 AT for YT and YX so two aspects		TR. VB
Series 12 CA for CY	a small inn/2V aspect	
Series 9 CT for CX	a single aspect	GI
Series 7 GC for XC	a single aspect	P
Series 5 GT for GX	a single aspect	IM

Knowing that only part of the **TA** series is "small inn", it is the **TG** series coming from TX, the closest to the center of the quadrant T, which has a double aspect, Stomach E and Master of the Heart MC, central aspects, which brings the whole to a total of 12 potential aspects.

Specification or generation of the 23 components

The order of specification or "generation" of inner and outer function components in the I Ching fits well with the above, noting that **TGA**, **TAG**, and **TAA** (or UGA, UAG, and UAA) as "non- -sens" must be attached to the internal function (Pl. 30).

THE MORE BALD DIAMOND

Board 30

- External function, “small inn” series
 - UUA-UUG specify component 1 (Cr meridian).
We then go in the direction of the generation of life, of the rise of the sun towards the east.
 - CU series specifies component 2 (IG meridian). We are going in the same sense of “generation” (meaning senes trogyre).

THE MORE BALD DIAMOND

- CAU-CAC specify component 3 (V meridian).
- GC series specifies component 4 (P meridian).
- GU series specifies component 5 (GI meridian).
- UAC-UAU specify component 6 (R meridian).
- UGC-UGU specify component 7 (MC meridian).
- UGG specifies component 8 (E meridian). Note that UGG is coupled with UGA, "non-sense center".
- UUC-UUU specify component 9 (Rt meridian).
- AUG specifies component 10 (TR meridian).
- AUU-AUC-AUA specify component 11 (VB meridian).
- AC series specifies component 12 (F meridian).
- Internal function, "little yang" series
 - UGA "center nonsense" One, source of the whole.
 - CG series specifies component 1 (Cr Element). We always follow the same meaning of "generation" series trogyre.
 - CC series specifies component 2 (IG Element).
 - CAG-CAA specify component 3 (V Element).
 - GAA-GAG specify component 4 (P Element).
 - GAC-GAU specify component 5 (GI Element).
 - GG series specifies component 6 (R Element).
 - UAA-UAG "non-sense centers", One in two.
 - They block the passage to the next series, UC, and force a diametrically opposed passage: MC Element cannot be structured, but does exist as a function. However, the diametrically opposite series is series 13, small inn, which brings us to series 14 (AG), small yang.
 - AGU-AGC specify component 7 (E Element); the way is open to the next passage in series UC, diametrically opposed.
 - UC series specifies component 8 (Rt Element).
 - Blocked between the "non-sense centers" UAA-UAG of a

THE MORE BALD DIAMOND

hand, and on the other hand UGA, the UC series can only end in AGG-AGA, diametrically opposed.

- AGG-AGA specify component 9 (TF Element).
- AAU-AAC specify component 10 (VB Element).
- AAG-AAA specify component 11 (F Element).

64 and 125 mutations (triplets)

Let us now approach the study of the three bigrams superimposed in the 64 hexagrams, in other words, the interplay by “triplets” of the four **TGCA** energies which define the I Ching ($43 = 64$) and thereby even an energy system.

There again these 64 hexagrams are like the palisade of our village which is the center, the unknown.

Our equation is enriched with:

- 64 triples of which we know the order of structuration,
- a center O, invisible from the outside.

If we want to involve the center O, and therefore the known unknown, using the same form of “triplets”, we then have 125 mutations ($53 = 125$) ([Pl. 31, reading](#) of the triplets from bottom to top, center out).

Note that of the 125 triplets:

- 64 are triplets comprising only radi CAGT **cal**s (outer circumference)
- 61 are triplets comprising the radical **O** (third circumference from the center).

THE MORE BALD DIAMOND

125 Mutations

61 mutations centrales : radical O

64 mutations périphériques

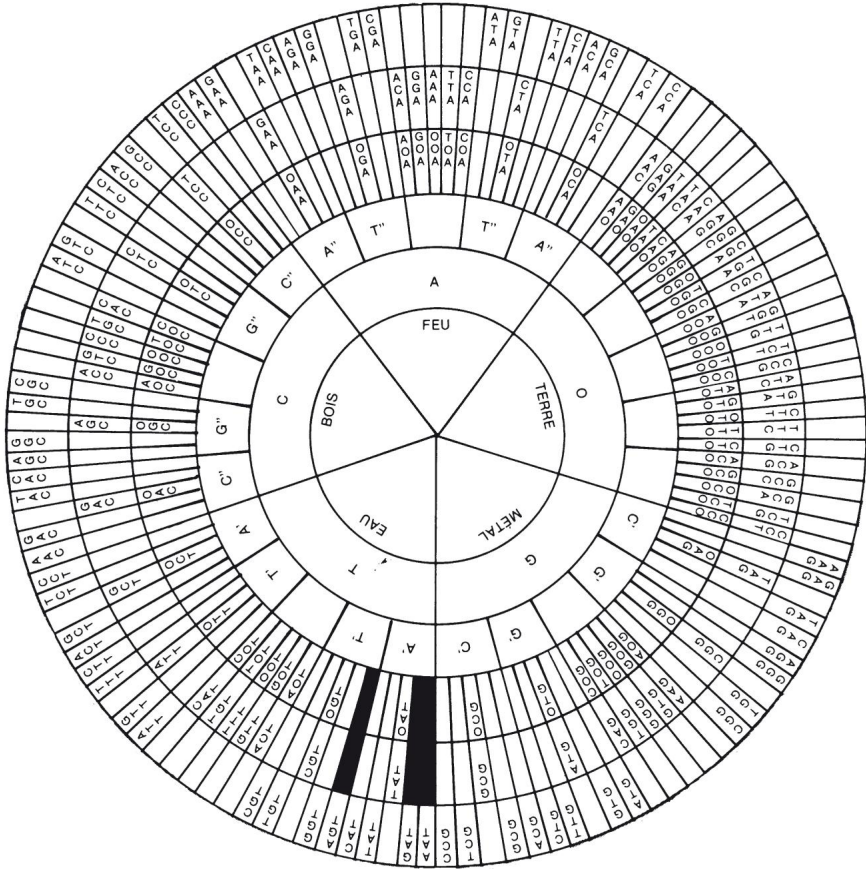

Plate 31

Thus, the center, Earth, has only 61 possibilities to appear, which amounts to saying that the center, considered as a generative energy system, can “specify” only 61 energies.

The generation order defined above, for a

THE MORE BALD DIAMOND

system corresponding to the 5 Elements, determines the order of specification of the triplets

- CAGT sequence for the lower radical (with O inter stalled)
- CTGA sequence for higher radicals (with O inter stalled)

We can therefore give a value **TGC** or **A** to each of the centers **O** of the 61 triplets. In this series of values, the three triplets, **TGA TAG** and **TAA** are the only ones (4th circumference from the center); no space is then available for them.

Let us note at the start that quadrant **O** makes it possible to complete each of the four other quadrants which have only 9 triplets.

Quadrants **C**, **A**, and **G** fill in first and specify all their triples: 16 for each radical.

Arrived in quadrant **T** (the last), we have successively:

- In series 3, **TC** and 1, **TT**, the set of triples is specified: 2 times 4.
- In series 2, **TG**, only the triplet **TGA** finds no available place:
 - OOA is already occupied by ATA
 - OOO is already occupied by GTT
 - OGA is already occupied by GGA
 - OGO is already occupied by AGC
 - TOA is already occupied by TCA
 - TOO is already occupied by TTT
 - TGO is already occupied by TGC

THE MORE BALD DIAMOND

- Finally in series 4, **TA**, the triplets **TAG** and **TAA** (the last to appear) are in excess and therefore find no available place.

The triplets **TGA**, **TAG** and **TAA** of a generative system cannot therefore specify anything in the following energy system and are therefore indeed “forbidden senses”, “non-senses”. However, we can put forward the hypothesis that **TAG** and **TAA**, **present on** the surface (in the system of 16 and 25 mutations) are the precursors of the “Master of the Heart and sexuality” function diffused throughout the organism.

Acupuncture: 125 Mutations
Organisation Énergétique

- ## Board 32

THE MORE BALD DIAMOND

The 125 mutations then break down from the following way:

- **64 mutations** represent the periphery (the palisade of our village) since they only include the peripheral radicals TGCA (circumference or Sky, **Pl.** 32).

Of these 64 mutations, **16 hexagrams** have a particular value:

- eight are formed of two similar trigrams:
T'T'/A'A'/G'G'/C'C'/G''G''/C''C''/T''T''/A''A''
 - eight are formed of two inverse trigrams:
T'A''/A'T''/G'C''/C'G''/G''C''/C''G''/T''A''/A''T''
- These sixteen hexagrams constitute in a way the punctuation of the whole of the 64 hexagrams and, as starting bases, are the generators of the 48 other hexagrams, thus representing the function of external distribution of the system.
 - They find their analogical correspondences in the eight marvelous bilateral vessels, considering the right and left sides of *Du Mai* and *Ren Mai*:

T'T'	= <i>Chong Mai</i>	straight	(yin)
T'A''	= <i>Chong Mai</i>	left	(yang)
A'A'	= <i>Yin Wei Mai</i>	straight	(yin)
A'T''	= <i>Yin Wei Mai</i>	left	(yang)
G'G'	= <i>Yin Qiao Mai</i> right		(yin)
G'C''	= <i>Yin Qiao Mai</i> left		(yang)
CC'	= <i>Ren Mai</i>	right side	(yin)
C'G''	= <i>Ren Mai</i>	left side (Yang)	
G''C'	= <i>From May</i>	right side	(yin)
G''G''	= <i>From May</i>	left side (Yang)	
C''G'	= <i>Yang Qiao Mai</i> right		(yin)
C''C''	= <i>Yang Qiao Mai</i> left		(yang)

THE MORE BALD DIAMOND

T"A' = <i>Yang Wei Mai</i> right		(yin)
T"T" = <i>Yang Wei Mai</i> left		(yang)
A"T' = <i>Dai Mai</i>	straight	(yin)
A"A" = <i>Dai Mai</i>	left	(yang)

The hexagrams defining the extremes, *Chong Mai* (center) and *Dai Mai* (periphery) mark for each the separation in right and left with the maximum difference (1st and 8th hexagrams of their respective sector).

On the contrary, those marking the respective slopes of *Ren Mai* and *Du Mai* are joint, thus specifying for each their median location, but also their right and left polarization, Yin and Yang.

- **48 hexagrams** are shared between the two Yin zones and Yang:

- 24 in the Yin zone represent the “internal function of the surface”. They find their analogical correspondences in the 12 bilateral main meridians (*Jing Mai*) (12 right and 12 left = 24). The 12 *Jing Mai* (primary meridians) on the right (Yin) occupy the first quadrant, T, (Yin in Yin), in the order of "generation" defined from the *He Tu*:

Cr-IG-VP-GI-R-MC-E-Rt-TR-VB-F

The 12 *Jing Mai* (primary meridians) on the left (Yang) occupy the second quadrant, G, (Yang in Yin), in the same order.

- 24 in the Yang zone represent the “external function of the area”. They find their analogical correspondences in the 12 ligamentous vessels (*Jing Jin*) bilateral (12 right and 12 left = 24). The 12 *Jing Jin* (ligament vessels) on the right occupy the third quadrant, C, (Yin in Yang), in the same order.

THE MORE BALD DIAMOND

The 12 *Jing Jin* (ligamentous vessels) on the left occupy the fourth quadrant, A, (Yang in Yang), in the same order.

- **61 mutations** represent the center (the village) since they include the radical O: (central square or Earth, **Pl. 31** and 32).

- 6 triplets, in quadrant O, have a value of cent tale:

OOO –	GTT value in series 5 (small inn)
OOT –	TCT value in series 3 (small yang)
COO –	CCC value in series 11 (small yang)
AOO –	AAA value in series 16 (small yang)
GOO –	GGG value in series 6 (small yang)
TOO –	TTT value in series 1 (small inn)

They correspond to the three Hearths.

- 23 triplets complete the O quadrant:
eleven are located in series "small yang" function Yin, internal, and thus find their analogical correspondences in the 11 organs and viscera.

OCC becomes TCC	Series 3 small yang
OGA becomes GGA	Series 6 small yang
OAG becomes GAG	Series 8 small yang
OGG becomes CGG	Series 10 small yang
OGC becomes CGC	Series 10 small yang
OCG becomes CCG	Series 11 small yang
OAA becomes CAA	Series 12 small yang
OGT becomes AGT	Series 14 small yang
OGO becomes AGC	Series 14 small yang
OAO becomes AAT	Series 16 small yang
OAC becomes AAC	Series 16 small yang

THE MORE BALD DIAMOND

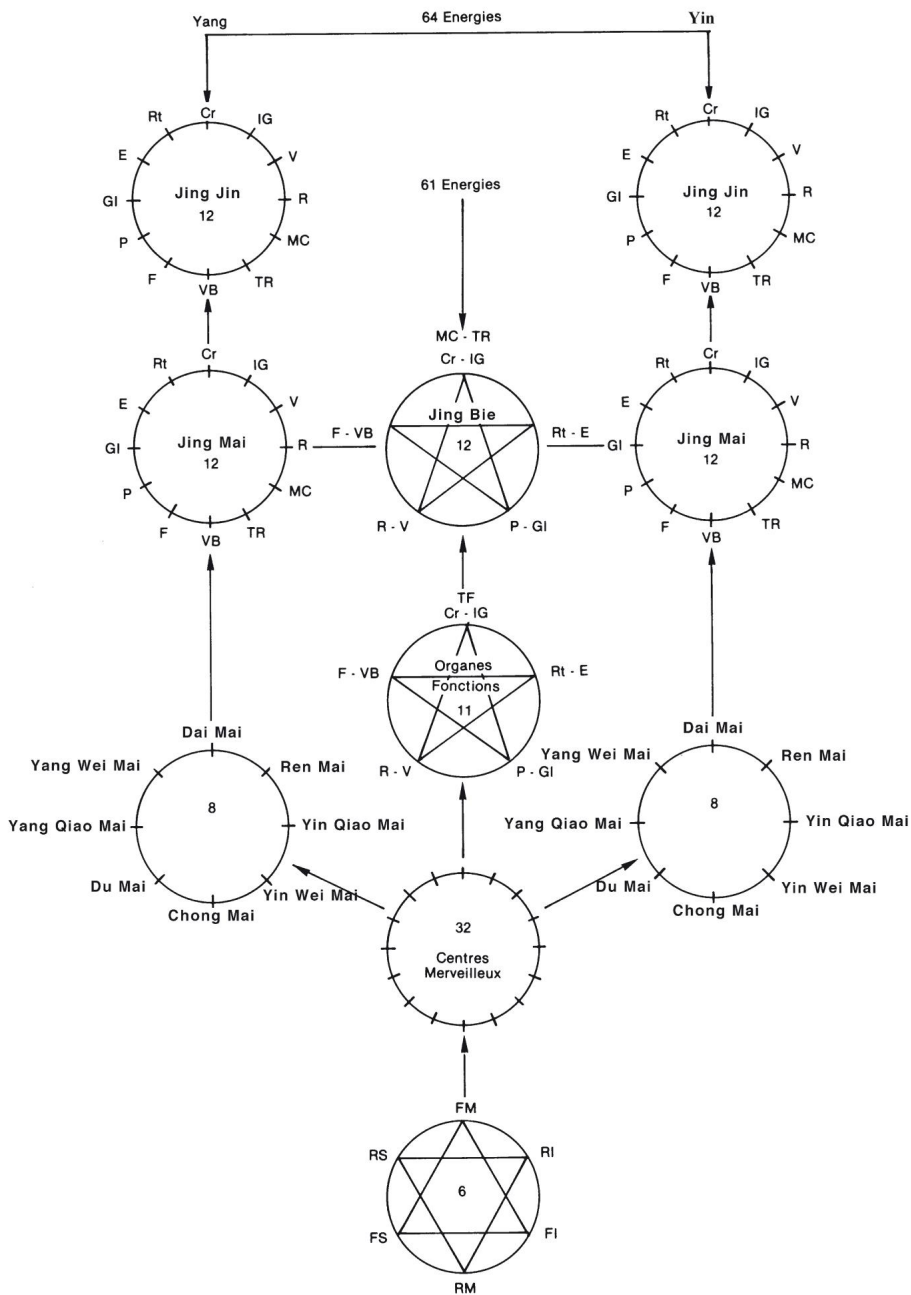

twelve are situated in series “small inn” function Yang, external, and find their analogical correspondences in the 12 collateral vessels (*Jing Bie*).

OTO becomes TTC	1	Series 1 small inn
OOG becomes TGG	2	Series 2 small inn
OTC becomes GTC	5	Series 5 small inn
OCT becomes GCT	7	Series 7small inn
OOC becomes GCC	7	Series 7 small inn
OCA becomes GCA	7	Series 7 small inn
OTT becomes CTT	9	Series 9 small inn
OTA becomes CTA	9	Series 9 small inn
OAT becomes CAT	12	Series 12 small inn
OTG becomes ATG	13	Series 13 small inn
OOA becomes ATA	13	Series 13 small inn
OCO becomes ACG	15	Series 15 small inn

- The 32 triplets remaining in CAGT quadrants are subdivided into eight times four triplets which give us the values of 32 energy centers:
These 32 “wonderful” centers or 8 quadruple centers distribute to the user system of internal functions, the 4 fundamental energies, transformed in the 3 Hearths into nutritive and defensive energies¹²⁵.

It is through these eight marvelous quadruple centers that the center can manifest itself; they are therefore the “internal generators” of the 11 organs/ functions and the 12 collateral vessels (*Jing Bie*).

¹²⁵ See chap. 32: *The 343 somatic and psychic energies*.

THE MORE BALD DIAMOND

Ultimately, an energy system analyzed according to its 125 components, is defined as follows (Pl. 31, 32 and 33):

- 61 energies are the internal energies of the system (square, Earth):

Peripheral function of energy reception:	
three Heaters	3
Central manufacturing and energy specification function:	
three Hearths	3
Internal generator distributing energy from the	
3 Heaters and 3 Hearths:	
eight quadruple wondrous Centers	32
Internal internal regulation function:	
eleven organs and viscera	11
External function of internal regulation, internal antenna of the Organs: twelve	
<i>Jing Bie</i> (collateral vessels)	12

- 64 energies are the external energies of the system (circle, Sky):

External generator distributing energies at its level, antenna of the eight quadruple centers:	
eight wonderful bilateral vessels	16
Internal function of external regulation, external antenna of the eleven organs:	
twelve bilateral <i>Jing Mai</i> (primary meridians)	24
External function of external regulation, most superficial antenna:	
twelve bilateral <i>Jing Jin</i> (ligament vessels)	24

In fact, we know that between Heaven and Earth there is manifestation, the third term which is its source and estuary, synthesis.

THE MORE BALD DIAMOND

Moreover, it is customary to say that the depth hides in the surface. This is indeed the case with the brain and the nervous system which manifest themselves at the level of the skin: does the ectoderm not polarize into ectoblasts and neuroblasts!

One can then ask whether the three aspects, the three phases of the beginning of the universe as described by Jean Charon¹²⁶, with “cosmological matter”, “dark radiation” and “particulate matter”¹²⁷, do not represent not the cybernetic model applicable to any energy system: the total energy balance is algebraically zero, the second term being the inverse of the first and of the same sign as the third, while being its inverse! In a fruit, the skin, the core and the pulp; in a cell, the membrane, the nucleus and the cytoplasm; in man, the skin (external function, Yang, the 64 peripheral hexagrams), the brain (including medulla and spinal cord), and the tissues and organs (internal function, Yin, the 61 central hexagrams). Any action on the skin will affect the other two by inverting the signal. The external function then appears as the similar and of the skin and of the nucleus, its inverse. It is the opposite of the internal function which concerns only the pulp, the organs.

Defining these two functions alone is enough to understand how the three functions work.

¹²⁶ Jean Charon, *The Spirit this Unknown*.

¹²⁷ Cosmological matter or dark matter = 21% of the universe. Dark radiation or dark energy = 75% of the universe.

Particulate matter = 4% of the universe

THE MORE BALD DIAMOND

levels of any energy system: production, distribution, use.

6 Qualities 216 mutations

The study of mutations can continue with that of the center polarized in **X** and **Y** functioning in triplets with the four fundamental energies **TGCA**. We then obtain 216 mutations ($6^3 = 216$) in which we note that out of the 216 triplets:

- 64 triplets include only the radicals **TGC** and **A**
- 152 triplets contain the radicals **X** and **Y**:
 - center **X** appears alone in 61 triplets
 - center **Y** appears alone in 61 triplets
 - the two centers **X** and **Y** appear together in 30 triplets, decomposing themselves into groups of 6 and 24 triplets.

Here again, the decoding technique will consist of giving a **TGC** or **A** value to the unknowns **X** and **Y** to understand their energy value.

From quadrant X, appear the 61 mutations previously encountered in quadrant **O** (see 125 mutations), increased by three triplets 128, i.e. 64 mutations in total:

YXY
XYY
XXX

These three triplets then respectively take the values of the “nonsense” centers:

THE MORE BALD DIAMOND

AGM
GAA
TT

From the Y quadrant, appear, as for the X quadrant, 61 mutations increased by three triplets, i.e. 64 mutations in total:

XYX
 YXX
 YYY

These three triplets then respectively take the values of the "nonsense" centers:

AGM
GAA
UUU

In the CAG and T quadrants are the 64 mutations of these four energies. The first of these three series (quadrant X) corresponds analogously to the definition of the nucleus of a fruit or to that of the DNA strand, the second (quadrant Y) to that of the pulp or the messenger RNA, the third to that of skin or transfer RNA¹²⁹.

From the **XCTGAY quadrants**, we find another three groups of eight triplets (TGC or A value indicated below), making 24 in total:

¹²⁹ In the first series, according to the inversions, the "nonsense" centers are ACT, ATC and ATT. See chap. 29: *The DNA double helix and the genetic code.*

THE MORE BALD DIAMOND

YYCTGAYYYYXYXY	YXXXXCTG AXX	
CTYYYYGAXYXYXY	XYCTXXX XGA	
XXXXXXXXGGTTTCCA	AYYYYY YYY	

AACTGAACATCTATAT	TTTCTG ATG	
CTCAAAGATGTGAAGA	CTGTC TGA	
TTGTTGTGGGTTCCA	ACCAAA ACA	

The eight series TC-GT-GG-GC-CT-CG-CC-AC have only one triplet to represent them: they each correspond to only one energy.

The eight series TT-TG-TA-GA-CA-AT-AG-AA have two triplets to represent them: they each correspond to two energies, except in the TA series where two triplets TAT (and TAC) correspond to one energy, the other two TAGs (and TAA) being "nonsense", as we defined it in the study of the 125 mutations. The energy of these last two triplets is linked to the Master of the Heart, unstructured, diffused throughout the organism.

At their central level, these 24 triplets must thus correspond to 24 energies representing the source or the "seed" of the following three stages. At another level, these three groups of triplets are analogous to the definition of 23 peripheral productions (11+12), or to that of the 23 amino acids specified by the transfer RNA, while accounting for the two triplets which do not specify nothing, apparently, in TA series (TAG and TAA).

The 125 mutations had brought us the demonstration that three triplets, TGA, TAG and TAA,

THE MORE BALD DIAMOND

cannot manifest themselves in peripheral productions, are prohibited meanings, nonsense. The 216 mutations show us that these three triplets indeed exist at the three stages of a generating system, each of which is defined by 64 mutations, and that the germ of this triple generator is composed of 23 energies plus one, the latter being theoretically undetectable. .

The analysis of the 216 mutations and their organization reveals in particular the relationships existing between the germ, the nucleus, the pulp and the skin of a fruit, or between the two strands of DNA, the messenger RNA and the RNA transfer, or even between the basic components of life, the nervous system, the organs (internal functions) and the skin (external functions)¹³⁰.

The 24 center-linked triplets, the germ, correspond to 23 effective energy structures.

One can wonder if these 24 basic energies would not analogously correspond to the 23 amino acids before their specification, plus an energy serving as a “testing ground” or a “medium” for the genetic code. They are subdivided into:

11 hydrophilic structures 12	11
hydrophobic structures 1 theoretically	12
undetectable energy	1

The 64 triplets corresponding to the nucleus, the strand of DNA, or to the nervous system, are subdivided into:

¹³⁰ See chap. 29: *The DNA double helix and the genetic code.*

THE MORE BALD DIAMOND

8 bilateral distribution structures	16
12 bilateral structures of internal use of distributed energies	24
12 bilateral structures of external use of distributed energies	24

The 64 triplets corresponding to the pulp, the messenger RNA, or the internal Yin functions of acupuncture, are subdivided into:

3 basic structures (the 3 "nonsense" centers) 6	3
structures for receiving and transforming energies (3 Heaters and 3 Hearths) 32	6
structures of distribution (8 quadruple centers) 11 structures	32
of internal utilization of distributed energies (organs) 12 structures of external utilization of distributed energies	11
(<i>Jing Bie</i>)	12

The 64 triplets corresponding to the skin, the transfer RNA, or the external Yang functions of acupuncture, are subdivided into:

8 bilateral distribution structures (<i>Ba Mai</i>)	16
12 bilateral structures for the internal use of distributed energies (<i>Jing Mai</i>) 12 bilateral structures for the external use of distributed energies	24
(<i>Jing Jin</i>)	24

49 and 343 mutations

We studied the periodicities from the single center O, then from the center polarized in X and Y, according to the mutations:

52	=	25	62	=	36	53	=	125	63	=	216
----	---	----	----	---	----	----	---	-----	----	---	-----

THE MORE BALD DIAMOND

It remains for us to discover those concerning the triple center **XOY**, equation with three unknowns, always in relation with the four fundamental energies, **TGCA**.

I have kept these two series of mutations, $72=49$ and $73=343$, for the end of this chapter, although, apparently secondary to the preceding ones, they are at the same time the starting point. We must not forget that the numbers 3 and 7 that we are going to use are perfect numbers, those linked particularly to consciousness and its different levels. We now come to the gates of life and its mystery!

16 and 49 mutations (42 and 72)

In the 49 mutations defined according to the relations by doublets of seven energies including three central unknowns, we find:

- 16 series including only TGCA radicals
 - 33 series including the unknowns XOY
- Of these 33 series,
- 10 are based on the radicals TGCAX and do not contain only these
 - 10 are based on TGCAY radicals and do not contain only these
 - 13 contain the radical O

Of these last 13 series, five, the most central, contain only the radicals X, O or Y.

On analysis, the following organization appears:

THE MORE BALD DIAMOND

- 5 series, the most central, only include the radicals X, O, or Y:

OXOYO
XOOOY

- 8 series, less central, still include the radical O and one of the four radicals TGC or A, i.e. 4 energy pairs:

OOTGCAOO	
TGOOOOCA	

- 20 series include the radicals X or Y and TGC or A, or 10 energy pairs:

XYXYTGXYCATGXCYCAXYXY	
TTGGXXXXXXYYYYYYCCAA	

- 16 series contain only peripheral radicals TGC or A, i.e. 8 energy pairs:

TGCATGCATGCATGCA	
TTTTGGGGCCCCAAAA	

The five central series of the first point above, correspond to the 5 Elements of this particular universe and ensure its life:

Wood	– AT for OX (C value, east)
Fire	– AA for YO (value A, to the south)
Earth	– TT for OO (O value, center)
Metal	– TA for OY (G-value, west)
Water	– TT for XO (T value, north)

We can hypothesize that the Earth, **TT**, in

THE MORE BALD DIAMOND

as a center, unknowable energy, will determine an orientation of the system:

- either in a non-sexed or hermaphroditic organism comprising, in addition to the 22 pairs of energies of the three other points above (8 series+20 series+16 series = 44 series or 22 pairs), the two pairs corresponding to the Fire Elements and Metal, **AA** and **TA**, on the one hand, and on the other hand to the Elements Water and Wood, **TT** and **AT**, making a total of 24 pairs of energies plus one energy.
- either in a male or female¹³¹ organism comprising only one pair of energies, coming from the Elements, **TT-AT**, female or **AA-TA**, male, in addition to the 22 pairs, i.e. a total of 23 pairs of energy plus three energies.

In the latter case, the 46 series in question then strangely resemble, in their organization, the 23 pairs of chromosomes of the human race, of which 22 pairs contain homologous chromosomes (the autosomes) while 2 sex chromosomes (the gonosomes) are defined, curiously, in scientific language, by **XX** in women, and by **XY** in men!

But it's only an hypothesis...

64 and 343 mutations (43 and 73)

Since the various components of the 343 mutations have been treated separately in the preceding pages, I

¹³¹ See further: *343 mutations*.

¹³² If we consider the structure-energy inversion: Female, Yin structure, corresponds to a Yang-Male energy, Yang structure, corresponds to a Yin energy.

THE MORE BALD DIAMOND

will not repeat the demonstrations and will only specify their organization:

in CAG and T quadrants: 64	mutations of these four energies (see 64 mutations)
from quadrant X: from	64 mutations (see 216 mutations)
quadrant Y: from quadrant	64 mutations (see 216 mutations)
O:	64 mutations (grouping similar to the previous ones)
completing the system, 87 mutations contain only the radicals XO or Y and are subdivided into: 1-16-46 and 24 mutations.	

Returning to the example of a fruit, we now have all of its components at our disposal:

• **Germ, defined by 87 mutations:**

- 1 central energy, life energy, the Unique, having three aspects within it, **OOO mutation**, theoretically undetectable
- 16 energies acting as a “central generator”
- 46 energies (or 23 pairs), “generated” by the previous 17
- 23 energies including 11 Yin and 12 Yang, specified by 61 of the previous mutations
- 1 theoretically undetectable energy, specified by two of the previous mutations.

All of these 87 energies determine the organization of the following stages:

• **Almond, defined by 64 mutations:**

- 64 Yin energies of internal function, starting from the O quadrant , divided into:
 $3+6+32+11+12$

• **Shell of the nucleus, defined by 64 mutations:**

THE MORE BALD DIAMOND

- 64 Yang energies of external function, starting from quadrant X, divided into: 16+24+24

- **Pulp, defined by 64 mutations:**

- 64 Yin energies of internal function, starting from the Y quadrant , divided into:
3+6+32+11+12

- **Skin, defined by 64 mutations:**

- 64 Yang energies of external function, from the **AGC** and T quadrants, divided into:
16+24+24

Similarly, in an organism, the physiological structures can be defined from the energy associated with them:

- **Genetic system (germ):**

- 1 unique energy, vital
- 85 energies organized in 16-46 and 23
- 1 secondary energy

That is a total of 87 energies which can be thought to relate to the 64 codons of the code and the 23 amino acids that they specify.

These 87 energies determine the organization of the following floors:

- **Central nervous system (almond):**

- 64 energies of internal function Yin whose analogical correspondences are to be defined.

- **Sympathetic system (shell):**

- 64 energies of external function Yang whose analogical correspondences are to be defined.

- **Internal functions of organs and viscera (pulp), including including the endocrine system:**

- 64 Yin internal function energies

- **External functions of the marvelous vessels and meridiens (skin):**
 - 64 Yang external function energies.

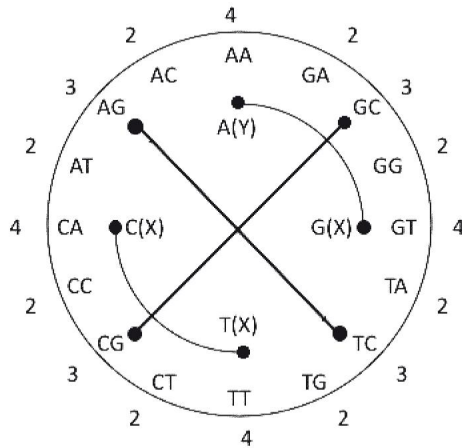

The more in-depth analysis of the "germ" level provides information of paramount importance for understanding the entire genetic code and the reproduction of organisms.

- A single, vital mutation, **OOO mutation**, chosen, oriented by the "terrain" and in particular the pH of the mother, seems to correspond, in sexual organisms, either to **TAG** or to **TAA**, a theoretically undetectable energy¹³³, and must determine hence the (future) orientation of the gonosome in **XX** or **XY**, hence the sex of the embryo (Pl. 34, 5th circumference from the center). If we refer to the 49 mutations (72) which are to be considered here as a diagram of synthesis and not of analysis, it appears that these two triplets play the role of the Earth Element, **TT**, in the choice of gonosomes humans¹³⁴ : the pair of gonosomes of the chromosomal system comes from the central system of the 5 Elements, while the 22 other pairs of chromosomes (the autosomes) are organized according to the 16 possible mutations, from four energy radicals functioning by doublets (42 = 16). By taking into account the basic orientations of the polarizations, we obtain according to the 49 mutations, the

¹³³ The so-called "non-sense" centers are, let us recall, TGA-TAG TAA.

¹³⁴ See above: *49 mutations*.

THE MORE BALD DIAMOND

six pairs of chromosomes correspond to four series which have a triple aspect:	12
eight pairs of chromosomes correspond to four series which have a quadruple aspect:	16
eight pairs of chromosomes correspond to eight series which have a double aspect:	16

- 16 mutations function as a “central generator” of the next 46 (or 23 pairs)¹³⁵. As a result, the operation of these 16 mutations is carried out according to an internal polarization of each energy or each hexagram which represents it: T'T'-T'A''-A'A'-A'T"... This polarization into two similar or inverse trigrams defines the 16 corresponding hexagrams. The determination of the species to which the organism being constituted belongs must depend on the organization of these sixteen mutations (Pl. 34, 7th circumference from the center).
- 46 mutations remain available in this first

¹³⁵ The 16 series analyzed in the first paragraph represent the simplified generation model of the 46, applied to the human chromosomal system.

THE MORE BALD DIAMOND

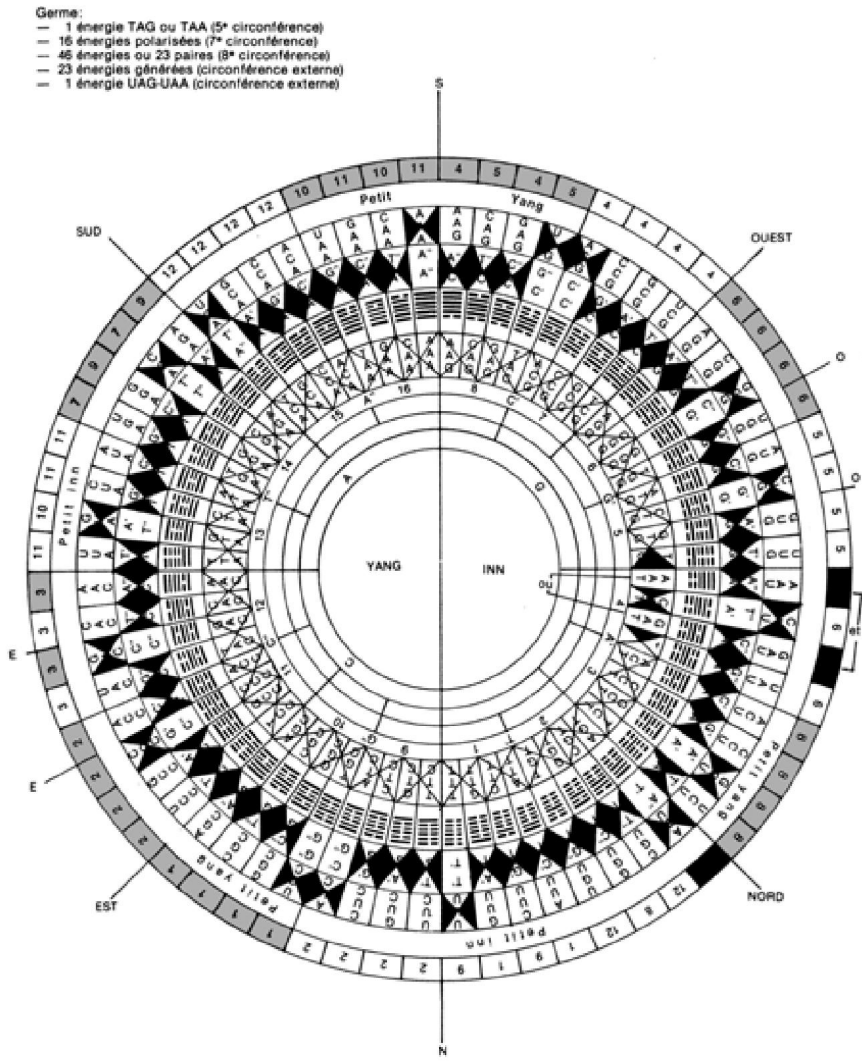

“level” of the “germ” of the genetic code. This means that 46 triplets will define them: ten in quadrant T and twelve in each of quadrants A, C and G (Pl. 34, 8th circumference). This also means that depending on the choice made between the two possibilities **TAG** or **TAA**, as we saw in the first paragraph, the triplet **UAU**, the only one available in series 4, will be linked, in as a precursor of the gonosome X136, either to a triplet of series 3, having a Yin value, to determine the female **XX pair**, or to a triplet of the same series 3, having a Yang value, to determine the **XY pair**, male¹³⁷.

- The organization of these 46 energies or 23 pairs then follows the directives received from the first 17 on the sex and the species and must itself determine in particular the race.
- The last 24 energies, the second level of the “seed”, are then organized, the twenty-fourth being however theoretically undetectable.

¹³⁶ Let us remember that at another level, that of the external functions, **UAU** specifies the Kidney meridian.

¹³⁷ At the level of the organic functions, series 3, with trigram of base **A'**, corresponds analogically to the *Yin Wei Mai* (master point MC 6) or even to the gonads, and “generates” the Spleen, organ.

THE MORE BALD DIAMOND

Board 34

THE MORE BALD DIAMOND

All 87 mutations then respond to the following pattern:

- A "generator" with 64 components, $1 + 16 + 46$, the 64th mutation occurring only in asexual or hermaphroditic organisms.
- A "production" of 24 energies, completely analogous to that carried out by the marvelous vessels ($24 = 11$ organs + 12 meridians + 1 triple "nonsense", **UGA, UAG, UAA**) or by the genetic code (23 amino acids +1 triple nonsense).

Ultimately,

The first level of the "germ" has 63 mutations. These distributions are broken down as follows:

- A mutation, theoretically undetectable, is represented by **TAG** or **TAA** (Pl. 34, 5th circumference).
- 16 mutations function by doublets as a "central generator" in which **T'A" (TGA)** is included (Pl. 34, 7th circumference).
- They appear as the precursors of the four strands of DNA 1-DNA 2-messenger RNA and transfer RNA, each defined by four quadrants ($4 \times 4 = 16$).
- 46 mutations (or 23 pairs) are distributed over the rest of the 64 possible mutations, at the level of the triplets, from **UUG** to **AAC** (Pl. 34, 8th circumference). They can be considered, in the human species, as the "precursors" of the 23 pairs of chromosomes.

The second level of the "germ" has 24 mutations. This breakdown as follows:

- 23 mutations are specified by 61 of the mutations of the first level: $12 + 11$ (Pl. 34). They seem to be the "precursors" of the future organization of

THE MORE BALD DIAMOND

23 amino acids, when specified to create proteins.

- A theoretically undetectable mutation is specified by two of the first-tier mutations, **UAG** and **UAA (A'C"** and **A'A")**. For his part, **T'A"** (**UGA**) does not specify anything.

The first level is therefore manifested through the intermediary of 63 mutations and the second from 63 mutations. But in the first level, we find **TAG** or **TAA** as well as **T'A"** (**TGA**), while the second level comes, among others, from **UAG (A'C")** and **UAA (A'A")**, the doublet **T'A"** (**UGA**) does not occur so much or does not specify anything.

It therefore seems that an internal mutation has occurred, perhaps thanks to the organization of the 23 pairs of energies, and that **T'A"** (**TGA**) has been transformed to give the missing triplet, **UAG (A'C")** or **UAA (A'A")**.

It is understood, as we said in the study of the 49 mutations (72), that in non-sexed or hermaphroditic organisms, the choice would not have to be made between **TAG** and **TAA**, these two aspects female and male being present in the germ at the same time as **T'A"** (**TGA**).

The fact remains that this "germ" stage appears, as a whole, as well as in each of its constituents, as the precursor and model of the entire genetic code, from the DNA double helix to the amino acids that it specifies and organizes to make proteins.

A second observation, perhaps even more fantastic, emerges from the foregoing.

THE MORE BALD DIAMOND

Indeed, we have defined the organization of nucleotides and amino acids according to a "vertical" level at 125, 216 and 343 mutations, with 85 constituents (87 mutations) as the basis. In these various arrangements, the four nitrogenous bases, thymine, cytosine, adenine and guanine, play among themselves in triplets, as fundamental constituents of the genetic code. It may be noted that the same is true analogously among the simple elements, four of which, carbon, hydrogen, nitrogen and oxygen, are the fundamental building blocks of matter.

However, it is likely that there exists, at the molecular level, another scale, "horizontal" this time, with 87, 125, 216 or 343 constituents/mutations, serving as the basis, or base, for the previous build. These periodic arrangements would then be composed of the various groups of constituents of living matter: nucleotides, amino acids, nucleosides, purines and pyrimidines, phosphoric acids, carbohydrates, which gradually participate in each of them.

The world of these molecules is then truly defined according to three-dimensional arrangements. But there always remains an unknown, central, both geometric and infinite point, "emptiness" of the Taoists, incomprehensible and out of reach on the plane of manifestation, and which we can only really discover by continuing our path. to that "there" from which we come...

Such is the permanent wonder of genesis and life, according to the order of the Universe...

16. Periodicities and Evolution

Involution and spiritual evolution

The organization of the chakras by eight can be defined according to that of the eight trigrams (the *Ba Gua* of Chinese energy) which serves as a model, or, if we want to push the analysis, according to the eight series of eight hexagrams, that is to say according to the 64 hexagrams of the I Ching.

Each of these eight series is itself defined by the lower trigram of each of its eight hexagrams, from T' to A":

T' series			– Cardiac
A' series			– Sacred
G' series			– Basal
C series			– Splenic
G" series			– Coronal
C" series			– Frontal
T" series			– Laryngeal
A" series			– Umbilical

The eight hexagrams of each series indicate that in each chakra the other seven are represented. This organization corresponds to the mechanical and cyclic regulation of the chakras between them, in analogy with that of the eight marvelous vessels of acupuncture.

THE MORE BALD DIAMOND

$92 = 81 = 64 + 17$

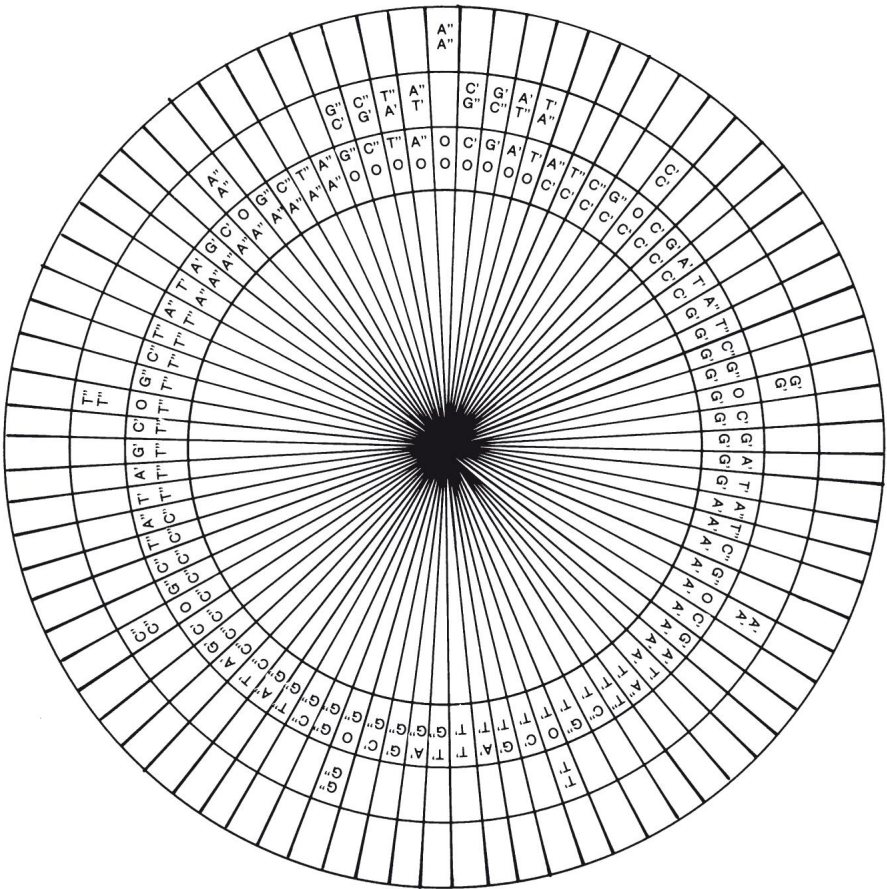

Plate 35

We have also seen that the spiritual evolution takes place through the intermediary of nine chakras, in other words, the eight that we have just located and which represent the periphery and a ninth, the Occipital chakra which represents the center, in

THE MORE BALD DIAMOND

as a reflective lens and link between Heaven and Earth. Thus, these nine will chakras are the points of support of the seven vehicles of conscience supports of our psyche.

When we proceed as we have done in Chinese energetics (periodicities of the four peripheral energies and of the central fifth: $42 = 16$ and $52 = 25...$), we realize that if the game of the eight trigrams or the eight polarized energies, two by two (82), gives us 64 mutations, on the other hand, that of the eight polarized energies plus an energy central unknown, **O**, also two by two (92), brings us to 81 mutations (Pl. 35).

Of these 81 mutations, 64 mutations do not involve as known energies T'A'G'C'G"C'T"A".

17 mutations include the unknown O. Of these 17 mutations, eight are based on the known energies T'-A'-G'... and will define seven series of nine hexagrams, while nine are based on the unknown O, thus defining nine series of seven hexagrams.

The problem is therefore to give a value T'A'G'C'G"C'T" or A" to the radical O in each of these two groups, in order to know how the center (or the infinite) and its seven planes of consciousness will manifest through the nine chakras.

Let us not forget that it is a question of the meeting of consciousness (Yang) and matter (Yin), of the "psyche" and the "soma", and ultimately of the sublimation of the latter; in other words, it is the involution or penetration of consciousness into matter, and the evolution or sublimation of matter into consciousness.

THE MORE BALD DIAMOND

Seven series of nine hexagrams: seven vehicles of consciousness and nine points of support.

The starting point will therefore be reversed compared to that of Chinese energy, since it is located at the level of consciousness and Yang, that is to say of A"A". It is the infinite (Heaven) and not the center (Earth) which serves as the starting point for involution (PI. 35 and 36).

Degrees of consciousness, from Yang to Yin:

À" O will take the value A"A"	Spiritual	
T" O will take the value T"T"	Intellectual	
C"O will take the value C"C"	Intuitive	
G" O will take the value G"G"	of Reflection	
C' O will take the value	C'C'	Sentimental
G' O will take the value	G'G'	Instinctive
A' O will take the value	A'A'	of Cohesion
T' O will take the value	T'T'	(Matter)

The **first hexagram**, A"A", defines at the same time:

- the “innocent” conscience having a global, divine knowledge, but without individual conscience;
- the supreme, “spiritual” vehicle of consciousness: 6 superimposed monograms Yang ;
- the first series of nine hexagrams of which it is the first, that is to say the nine points of support, nine centers of energy or *chakras* that this vehicle of consciousness will have to use progressively¹³⁸.

¹³⁸ Each vehicle of consciousness manifests through a particular chakra, but participates secondarily in the other eight.

THE MORE BALD DIAMOND

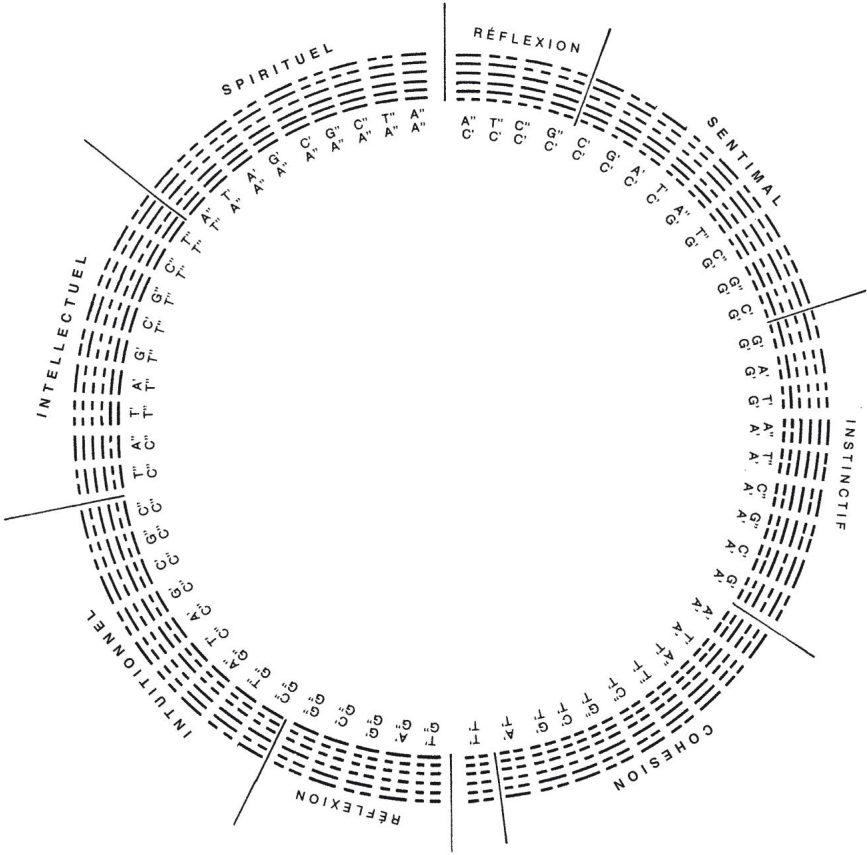

The **second hexagram**, T"T", marks a penetration of consciousness into matter: each constituent trigram has two Yang monograms surmounted by a Yin monogram. It defines the "intellectual" vehicle of consciousness, together with the second set of nine hexagrams (the nine *chakras*) through which it will manifest.

The **third hexagram**, C"C", accentuates this involution, matter, Yin, being at the center of the trigrams that compose it. It defines the "intuitional" vehicle of consciousness and, as before, the third set of nine hexagrams (nine *chakras*).

The **fourth hexagram**, G"G", represents with the fourth series of nine hexagrams, the vehicle of consciousness of reflection, at the same time as an inversion and a connection between the higher and lower planes, between the intuitional plane and the mental sentient plane; in this series, we find:

- in G"G", consciousness dominated by matter, with two Yin monograms surmounting a Yang monogram in each of the trigrams;
- in G"T", the dominance is further accentuated, with a Yang monogram surmounted by five Yin;
- in C A", the inversion occurs, consciousness dominating matter, with its five Yang monograms surmounting one Yin monogram.

THE MORE BALD DIAMOND

7 Plans de Conscience
Involution

Board 36

THE MORE BALD DIAMOND

This set reveals that the materialistic rationalism of the concrete mind is linked to the domination of consciousness by matter, while its reflection is chained and disturbed when it sails in the sentimental and emotional clouds.

Depending on whether one or the other, "rational" reflection or "emotional" reflection, predominates, the thought will be materialistic or mystical, with a touch of sectarianism. Harmony will ultimately be the result of a relative control, or rather of a harmonization of these extreme aspects.

The **fifth hexagram**, C'C', confirms with the vehicle of sentimental consciousness and the fifth series of nine hexagrams, a supremacy of emotional consciousness over matter: two monograms Yang above a Yin in each of the trigrams.

The **sixth hexagram**, G'G', which commands the sixth series of nine hexagrams, marks the blocking of consciousness by matter, but at the same time, the taking possession of matter by consciousness, with the vehicle of consciousness. instinctive: a Yang monogram between two Yin, in each trigram.

The **seventh hexagram**, A'A', and the seventh and last series of nine hexagrams, mark, with the vehicle of consciousness of cohesion of matter, the acceptance of consciousness by the matter which serves as its support: two Yin monograms surmounted by a Yang monogram in each trigram.

The **eighth hexagram**, T'T', then appears,

THE MORE BALD DIAMOND

alone, like a hinge, composed solely of matter (6 Yin monograms): end point of involution, it will be the point from which evolution will be able to take place, like the pediment on which the ball came hit to bounce back to its thrower.

Nine sets of seven hexagrams: nine chakras and seven vehicles of consciousness

The nine hexagrams of the following series¹³⁹, to mark the evolution of matter, sublimated by consciousness, will be constituted by inversion of the two trigrams which compose them (Pl. 35 and 37). Only the last of these hexagrams, which is given to us by the central radical O, doubled, can only correspond to the return to pure consciousness, to infinity, and can therefore only take on the value **A"A"**.

			chakra
OA" will	take the value	YOUR"	frontal
OT" will	take the value	A'T" Laryngeal	
OC" will	take the value	Sacred G'C"	
OG" will	take the value will	C'G" Splenic	
OC'	take the value will	G"C'	Occipital
OG'	take the value will	C"G' Basal	
O'	take the value will	T"A' Umbilical	
OT'	take the value	A"T' Cardiac	
OO will	take the value	A"A" Coronal	

¹³⁹ See in this same chapter, "Transmutation - Transformation - Transfiguration" for the definition of the relations of the 9 hexagrams and the series of which they form the punctuation, with the 9 *chakras*.

THE MORE BALD DIAMOND

We have seen that the hexagram **T'T'** represents the material from which evolution will take place, the pediment on which consciousness has come to rebound ([Pl. 36](#) and [37](#)). We will therefore find, from Yin to Yang, in binary order (Pl. 37):

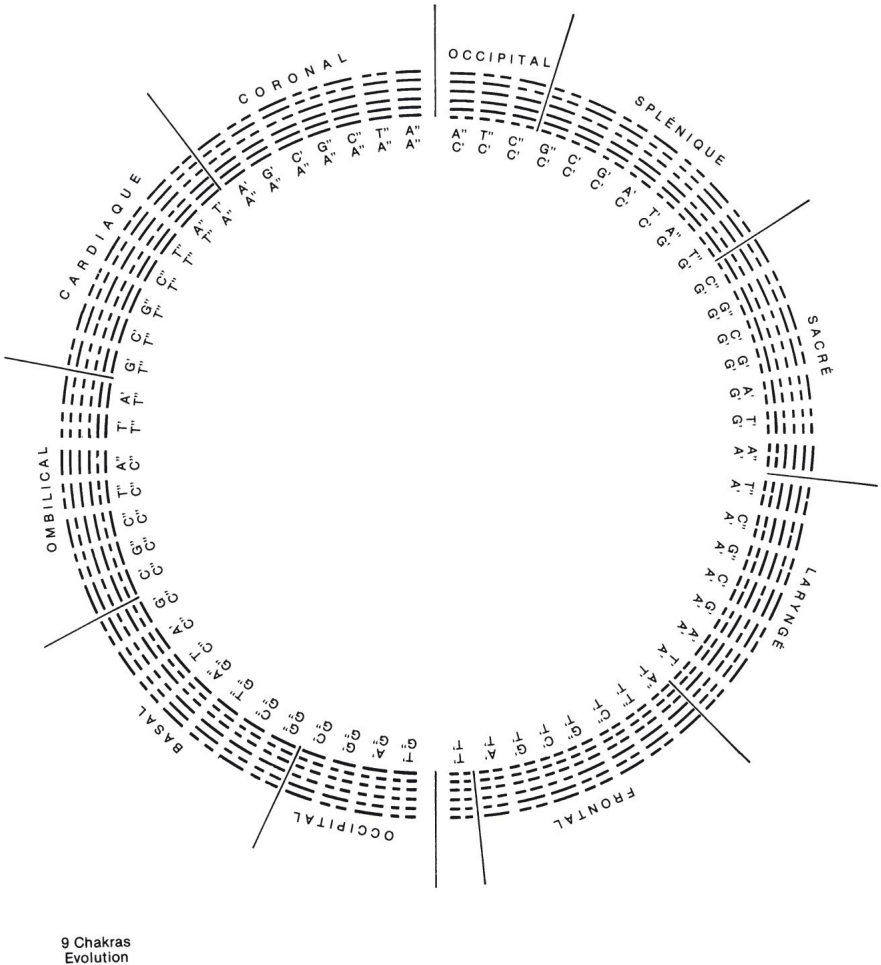

Plate 37

THE MORE BALD DIAMOND

The **first hexagram T'A"** is the final point of the first series of 7 hexagrams, that is to say of the 7 qualities of consciousness, and of the 7 fires of *Kundalini*, which will ultimately be present in this chakra. , frontal center, center of creation. Matter supports consciousness like an altar the monstrance: 3 Yin monograms surmounted by 3 Yang monograms¹⁴⁰ .

This hexagram thus marks the individualization, along with the duality of manifestation.

9 series	chakra
T'A" series	frontal
A'T" series	Laryngeal
G'C" series	Sacred
C'G" series	Splenic
G"C' series	Occipital
C"G' series	Basal
T"A' series	Umbilical
A"T' series	Cardiac
A"A" series	Coronal

The **following eight hexagrams** in turn punctuate eight series of seven hexagrams, that is to say, as before, the seven qualities of consciousness and the seven fires of *Kundalini* which will be present in each of the corresponding *chakras* .

The first eight series, from **T'A"** to **A"T'**, score

¹⁴⁰ Each *chakra* is the fulcrum of a particular vehicle of consciousness, but it is secondarily sensitive to the energy of the other six.

THE MORE BALD DIAMOND

the different mutations that matter undergoes under the influence of consciousness which shapes it more and more, to end up in **A''T'** by supporting it entirely and making it "volatile", under the impact of altruism, love, wisdom and spiritual insight from the heart center: three Yang monograms on three Yin monograms.

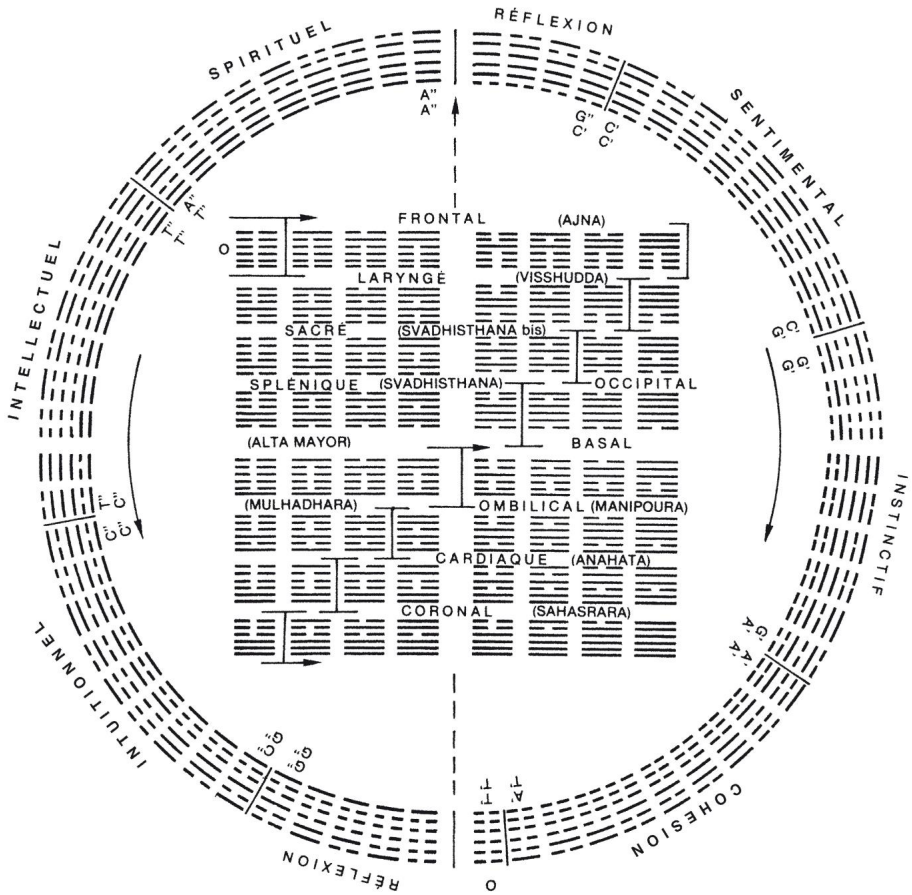

Finally the **ninth hexagram**, A''A'', last of the ninth series of seven, marks the return to pure consciousness: six Yang monograms. But this consciousness has meanwhile been able to assimilate the quintessence of all lived experiences. She has thereby acquired a superior knowledge and awareness of her own personality, consubstantial with others, with the All, with God.

Transmutation-Transformation-Transfiguration

Matter is the appearance of any energy system. This is defined in relation to matter according to a succession of polarizations, mutations, from Yin to Yang, from Earth to Heaven, which can be summarized as follows:

2 monograms Heaven and Earth, or Yang and Yin	
4 bigrams 8	4 fundamental energies
trigrams 64 I	<i>Ba Gua according to the He Tu</i>
Ching <i>hexagrams</i>

9 Centres d'Energie: Chakras
du INN au YANG

Board 38

This set of 2-4-8-64 mutations allowed us to appreciate, according to Chinese energetics, the as-

THE MORE BALD DIAMOND

cyclical, sinusoidal aspect of space-time, therefore the cyclical and mechanical regulations of any energy system.

But we have seen that a linear, evolutionary axis was inseparable from the cyclic, sinusoidal axis, thus marking the spatio-temporal manifestation, between the past and the future.

In accordance with Indo-Tibetan energetics, we have therefore also considered in the Yi King the evolution of Yin to Yang from **T'T'** to **A"A"**, and discovered the milestones of involution and evolution¹⁴¹.

It then appeared two types of organization of the 64 hexagrams of the I Ching (Pl. 38).

“Involution” in seven series of nine hexagrams, starting from Heaven, psychic unity (A"A"), marked out by seven hexagrams each formed of two similar trigrams. These seven series correspond to seven psychic functions expressing themselves through the intermediary of seven vehicles of consciousness (Pl. 38, circumference) having nine chakras as points of support.

9 hexagrams from A"A" to T"A" Synthetic. Witty	
9 hexagrams from T"T" to C"T" 9	Intuitive. Intellectual
hexagrams from C"C" to G"C" Altruist.	Intuitive
9 hexagrams from G"G" to C'G" of Reflection	
9 hexagrams of C'C' Egotist. Sentimental	
9 hexagrams from G'G' to A'G' 9	Instinctive
hexagrams from A'A' to T'A'	Analytical, cohesive

¹⁴¹ I must, here, thank Professor Jean Lombard, of the Biological Research Center of Geneva (CIRB), who put me on the path of this interpretation of the Yi King.

THE MORE BALD DIAMOND

The doubled trigram of the first hexagram of each series defines the series. The last hexagram after the seventh series, **T'T'**, represents matter and therefore has a psychic value of "zero".

Serving as points of support for these seven psychic functions or these seven vehicles of consciousness and evolving by their doing, but in the opposite direction, from the Earth, physical unity (**T'T'**, value **0** on the psychic plane), nine energy centers or "chakras" find their correspondences in nine series of seven hexagrams, punctuated by nine hexagrams themselves formed of two inverse trigrams (except the last **A"A"** which is synthesis, spiritual unity); these nine hexagrams thus mark the union of Heaven and Earth, of psychism and physiology, and therefore represent the phenomenal expression of the seven vehicles of consciousness (Pl. 38, central square).

7 hexagrams of T'A' 7	to T'A"	frontal	–Ajna _
hexagrams of A'T' 7	at A'T"	Laryngeal	– Visuddha
hexagrams of A'A" 7	at Sacred G'C"		– Svadhishtana bis
hexagrams of G'T" 7	to C'G" Splenic	– Svadhishtana	
hexagrams of C'C" 7	to G'C'	Occipital	– Alita mayor
hexagrams of G"G" to C' 'G' 7		Basal	– Mulhadhara
hexagrams of C'C' 7 hexagrams of T'A'	to T'A'	Umbilical	– Manipura
T'G' 7 hexagrams of A"A'	to A'T' Cardiac	– Anahata	
	at A"A" Coronal		– Sahasrara

The last hexagram of each series defines it.

The analysis of these two types of organization, complementary to each other, will show us the workings.

THE MORE BALD DIAMOND

“Polarization” is the law of manifestation. The seven points of support, necessary for the manifestation of the seven vehicles of consciousness, must therefore have as their starting point a polarized center (Pl. 39, central circumference).

This will be defined by Yin (— —) and Yang (—):

- (• 1 center at the beginning of the evolution: Yin-Splé
fuck
• 1 center at the end of this evolution: Yang -Occipital

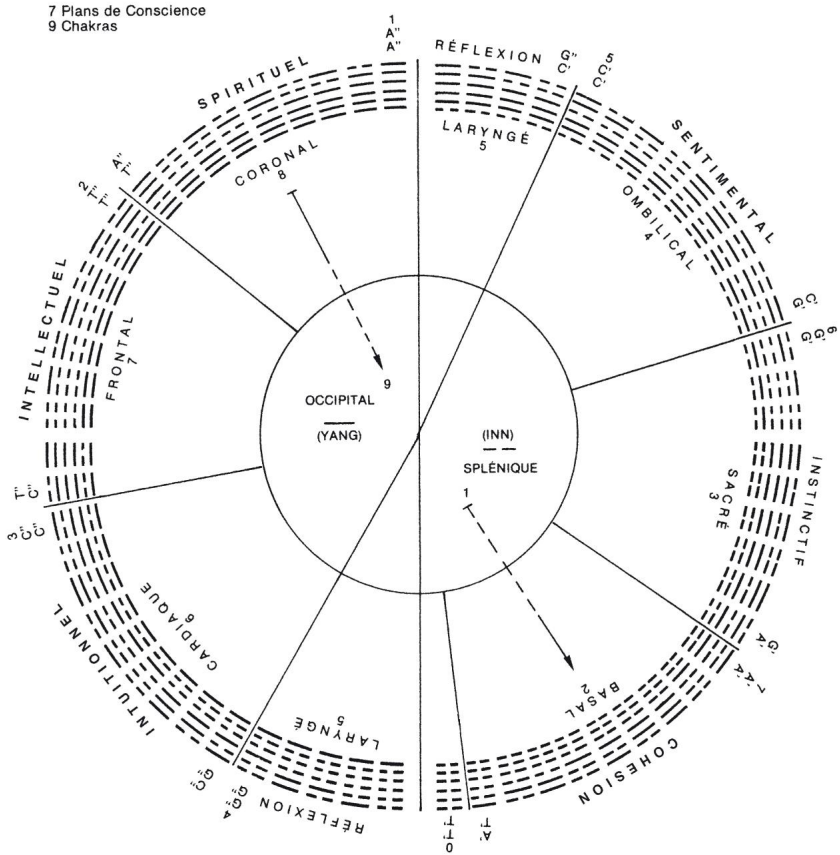

Note that both are linked to the system
neuro-endocrine

- the Splenic to the hypothalamus
- the Occipital to the carotid glomus.

The order of appearance of the nine centers and their dynamization will take place in the reverse order of that of the vehicles of consciousness, since it is the Earth (Yin) which gradually joins the Sky (Yang), in other words since it is It is matter that is progressively energized, sublimated, by consciousness:

1 – Splenic
2 – Basal
3 – Sacred
4 – Umbilical
5 – Laryngeal
6 – Cardiac
7 – Frontal
8 – Coronal
9 – Occipital

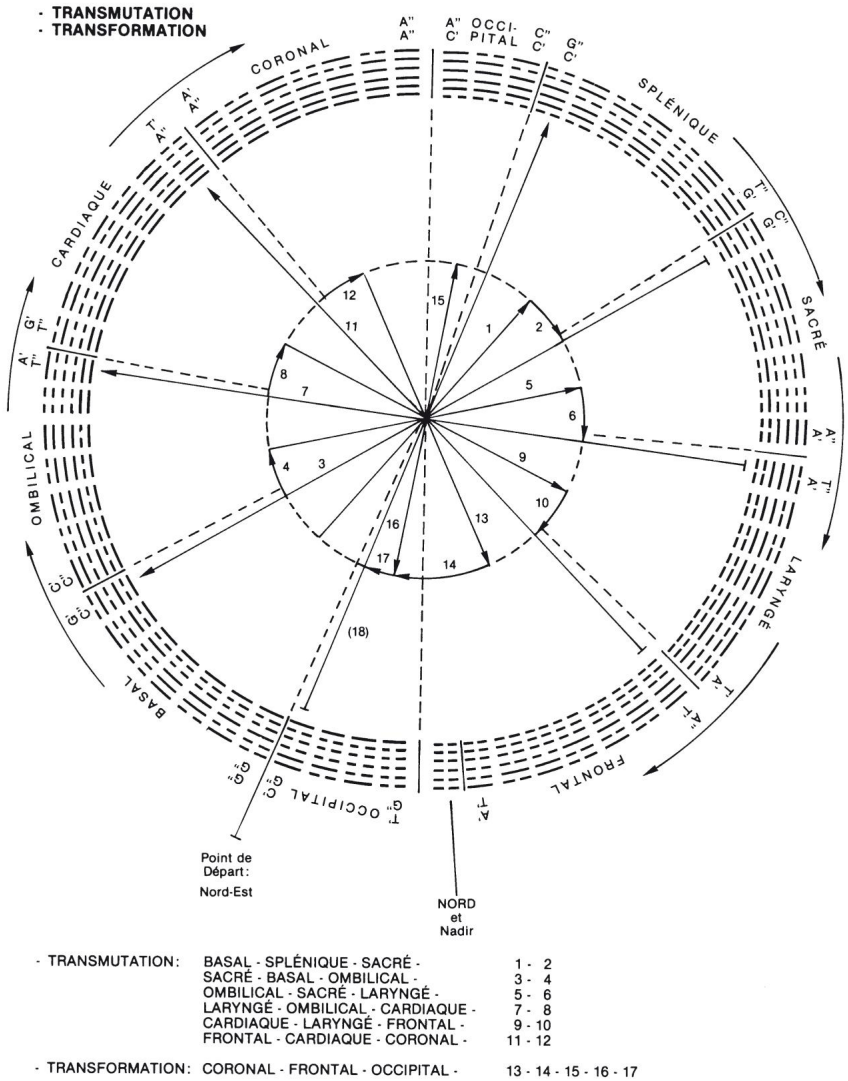

THE MORE BALD DIAMOND

Board 39

The location of the respective "roots" of these energy centers, of these *chakras*, as well as their progressive organization and their practical correspondences with the hexagrams, will result, in man, from the fundamental law of evolution, the law of victory - generation, or the law of inhibition - activation, as we will discover (Pl. 40). _____

THE MORE BALD DIAMOND

Board 40

1 The function of the cohesive, “analytical” consciousness of its dense vehicle represents the Yin (Earth) energy, in relation to the function of the

THE MORE BALD DIAMOND

spiritual, "synthetic" consciousness of its subtle vehicle, of Yang (Heaven) polarity.

Moreover, we have seen in Chinese energetics that the generation takes place in the sinestrogryal direction (clockwise), starting from the north (Yin) with a shift towards the east.

The fulcrum of the "analytical" function of the consciousness of cohesion, the Basal center, will therefore appear offset in G"G", to the northeast, the starting point of the series of seven hexagrams, the last of which C"G' particularly defines it.

The root of the Basal center is at the lower level, in S5/Coccyx.

The fulcrum of the "synthetic" function of the spiritual consciousness of life, initially the Splenic center, will of course be diametrically opposed to it, from C"G" to G'T"¹⁴².

The root of the Splenic Center is level with the tip of the eleventh rib on the left.

The Basal center possesses within itself and distributes the force of *Kundalini*, the serpent fire, energy of the Earth.

The Splenic center absorbs and distributes vitality, *Prana*, energy from Heaven.

- 2 The density of matter inhibits diffuse energy, is victorious over it; the Basal center, matter, with the fire of *Kundalini*, tends to suffocate, to inhibit, the Splenic center (arrow 1) and the vitality of *Prana*;

¹⁴² Note that due to the offset of the axes, the hexagram C"G", 1st hexagram of the Splenic, is not in the zone of opposition of the Basal center, which will be, thereafter, of a capital importance.

THE MORE BALD DIAMOND

it obliges the latter to transmit its energies, according to the direction of the "generation" (clockwise direction) to the Sacred center which is born and becomes active (arrow 2).

The Sacred center, the fulcrum of the instinctive sensory function, therefore appears from G'C" to A'A". Its root is at the level of L2/L3.

- 3 The Sacral center absorbs the energies of the Splenic center (arrow 2) and the "son" then avenges his "mother" by attacking in turn the Basal center of which he is victorious, by inhibiting it, by instinctive reaction (arrow 3) .

The Sacred, G'C", is the inverse of the Basal, C"G' and thus obliges it to transmit its energies to the Umbilical center which is born and becomes active (4) from C"C' to T"A '.

The root of the umbilical center is at the level of D8/D9.

- 4 Meanwhile, the Splenic center has finished transferring its energies (except C'G" which has not been inhibited, due to the shifting of the axes) to the Sacral center which includes it within itself.

The Cardiac center begins to be born, immediately superior to the Umbilical center, from T"G' to A"T'. Its root is at the level of C7/D1.

- 5 The umbilical center absorbs the energies of the basal center (4) and the "son" avenges his "mother" by attacking in turn the diametrically opposed sacral (+ splenic) center, inhibiting it (5), and obliging it to transmit its energies to a new center defining a higher creative function, the mental function of reflection: the

THE MORE BALD DIAMOND

Laryngeal center which is the fulcrum of this one, is born and becomes active from A'T" to A'T'. Its root is at the level of C3/C4.

- 6 In the meantime, the Basal center has finished transferring its energies (i.e. C"G', the only hexagram inhibited by the Sacred) to the Umbilical center which thus includes it in itself: c is the first sphere of *Kundalini* fire that has been energized; the other six continue to pulsate softly, dormant.

The Frontal center begins to arise as the fulcrum of the function of intelligent activity of the intellectual consciousness, from T'A" to T'A', immediately superior to the Laryngeal center. Its root is at the pituitary level.

- 7 The Laryngeal center absorbs the energies of the Sacral (+ Splenic) center (6) and the "son" avenges his "mother", attacking in turn the Umbilical (+ Basal) center, inhibiting it (7):

The Laryngeal, A'T", is the opposite of the Umbilical, T'A' and thus obliges it to transmit its energies to the Cardiac center which becomes active (8).

- 8 In the meantime, the Sacral (+ Splenic) center has finished transmitting its energies (except G'C" which has not been inhibited due to the shifting of the axes) to the Laryngeal center which thus includes them in itself. The Coronal center begins to be born as the fulcrum of the synthetic function, from A"A' to A"A", immediately superior to the Frontal centre. Its root is at the level of the epiphysis.

- 9 The Heart center absorbs the energies of the Umbilical (+ Basal) center (8) and the "son" avenges its

THE MORE BALD DIAMOND

"mother" by attacking in turn the Laryngeal center (+ Sacral + Splenic), diametrically opposed, by inhibiting it (9) and forcing it to submit its energies to the Frontal center which becomes active (10).

This causes a beginning of excitation of the Occipital center, subsidiary of the Laryngeal center.

- 10 In the meantime, the Umbilical (+ Basal) center has finished transmitting its energies (i.e. T"A', the only hexagram inhibited by the Laryngeal) to the Cardiac center which thus includes them in itself : the first sphere of *Kundalini* fire continues to rise, its passage having been prepared by the corresponding aspect of the astral, sentimental consciousness. The Occipital center, secondary center of the Laryngeal center, begins to be born, from G"T' to G"C', immediately inferior to the Frontal center.

Its root is at the level of the occiput/atlas hinge.

- 11 The Frontal center absorbs and directs the energies of the Laryngeal center (+ Sacral + Splenic) (10) and the "son" avenges his "mother" by attacking in turn the Cardiac center (+ Umbilical + Basal), inhibiting it ban (11):

The Frontal, T"A", is inverse to the Cardiac, A"T' and thus obliges it to submit its energies to the Coronal center which becomes active (12).

- 12 The Coronal center absorbs the energies of the Cardiac (+ Umbilical + Basal) center (12) and reverses the direction of the energies, hitherto ascending, by transmitting to the Frontal center, diametrically opposed, the most spiritual energy, that of the pure spirit. , of the Monad, (13), and forcing it to

THE MORE BALD DIAMOND

transmit to the Occipital center from G''T' to G''C', which becomes active (14).

But the Occipital inhibits itself (15-16), C'A'' to C'C'' being diametrically opposed to G''T' and the rest, except G''C' which is then activated (17).

The Occipital has its root at the level of the occiput.

However, the transfer of energies from the Coronal center to the Frontal center and from the Frontal center to the Occipital center causes a particular vibration:

Occipital,	in G''T' to G''C', is in Yang zone
	in C'A'' to C'C'', is in the Yin zone

The vibration related to this inversion of polarity is consecutive to the impact of energies which were until then ascending, and which, coming now from the Monad, are descending and induce a new period in the spiritual evolution.

The first six phases (Pl. 40, from 1 to 12) corresponded to the period of "Transmutation", that is to say of the transfer of energies from bottom to top. These transfers were all determined by the reciprocal action of the duality of the first sphere of *Kunda lini* and *Prana*, a duality represented by the Basal and Splenic centers inhibiting each other in turn:

- Basal inhibits Splenic (1)
- Sacral + Splenic inhibit Basal (3)
- Umbilical + Basal inhibit Sacral + Splenic (5)
- Laryngeal + Sacral + Splenic inhibit Umbilical + Basal (7)
- Cardiac + Umbilical + Basal inhibit Laryngeal + Sacral + Splenic (9)

THE MORE BALD DIAMOND

- Frontal + Laryngeal + Sacral + Splenic inhibit Cardiac + Umbilical + Basal (11), which transmute their energies to transfer them to the Coronal (12).

The following phase marks the triggering by the Coronal center of the period of "Transformation", that is to say of the descent of the energy of the Monad which will join the energy of *Kundalini* (13-14... 17)¹⁴³.

However, just before this phase is triggered, the man is in very great danger. Indeed, it is through pure matter, T'T', that the Frontal transmits its energies to the Occipital. During this "encounter", man can lose himself, if he is not careful, in the most sclerosing materialism.

These different phases can only take place over many incarnations and intermediate regulations, five by five, will therefore exist, in order:

- 1 Basal - 2 Umbilical - 3 Cardiac - 4 Sacral (Splenic)-5 laryngeal
- 1 Frontal- 2 Umbilical (Basal)- 3 Cardiac - 4 Sacral (Splenic)-5 Laryngeal
- 1 Frontal- 2 Umbilical (Basal)- 3 Cardiac - 4 Coronal-5 Laryngeal (Sacral -Splenic)
 - 1 Frontal - 2 Occipital - 3 Cardiac (Ombili cal-Basal)- 4 Coronal-5 Laryngeal (Sacral -Splenic).

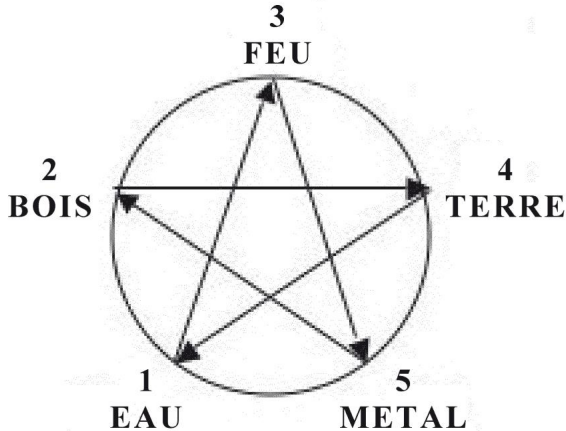

The general diagram of operation of these first four phases of intermediate regulations is that of the 5 Chinese Elements, in order:

¹⁴³ The Monad contains within itself the three divine aspects of Will, Love, Wisdom and Active Intelligence.

THE MORE BALD DIAMOND

1 Water-2 Wood -3 Fire-4 Earth-5 Metal

The laws of inhibition and activation, laws of “victory” and “generation” of the *Ke* and *Sheng* cycles of Chinese energy are then implemented.

The order of placement of the major centers (or chakras) is therefore ultimately:

	chakra	root
1	Basal	level S5/Coccyx
2	Splenic	level tip 11th Hill on the left
3	Sacred	level L2/L3
4	Umbilical	level D8/D9
5	Cardiac level C7/D1	
6	Laryngeal	level C3/C4
7	Frontal	pituitary level
8	Coronal	Epiphysis level
9	Occipital	Occiput/Atlas level

The sequence of inhibitions and activations which then intervene leads, through the intermediary of the

THE MORE BALD DIAMOND

period of "Transformation", descent of the energy of the Monad, to the period of "Transfiguration", period of junction and harmonization of the energies of Heaven and Earth; period of harmonization of the Monad of which the splenic *Prana* was only a lower aspect, the densest, and of *Kundalini*.

We have seen previously (Pl. 40) that, thanks to the contribution of energy coming from the Coronal through the intermediary of the Frontal, the Occipital, set in vibration, inhibited itself in part (15 - 16), which activated G"C' (17):

- G"C' of the Occipital inhibits its opposite, C"G" of the Splenic (18), which activates the other six hexagrams/energies of the Splenic (Pl. 41: 1 and 2).
- The six hexagrams/energies of the Splenic progressively inhibit, one after the other, those of the diametrically opposed Basal (except C"G' because of the displacement of the axes).
- The six spheres of *Kundalini* fire which had hitherto remained dormant in the Basal center, are thereby energized and gradually transmit their energies to C"G', the last hexagram/energy of the Basal center (3-4) .
- Basal C"G' inhibits its opposite Sacred G"C" which activates the other six Sacred hexagrams/energies (5-6).
- The six hexagrams/energies of the Sacred inhibit the bilical Om, diametrically opposite (except T"A' due to the offset of the axes), awakening the six aspects of this center still dormant, which activates T"A' (7-8).
- T"A' of the Umbilical inhibits its inverse A'T" of the Laryngeal, which activates the other six hexagrams/energies of the Laryngeal (9-10).

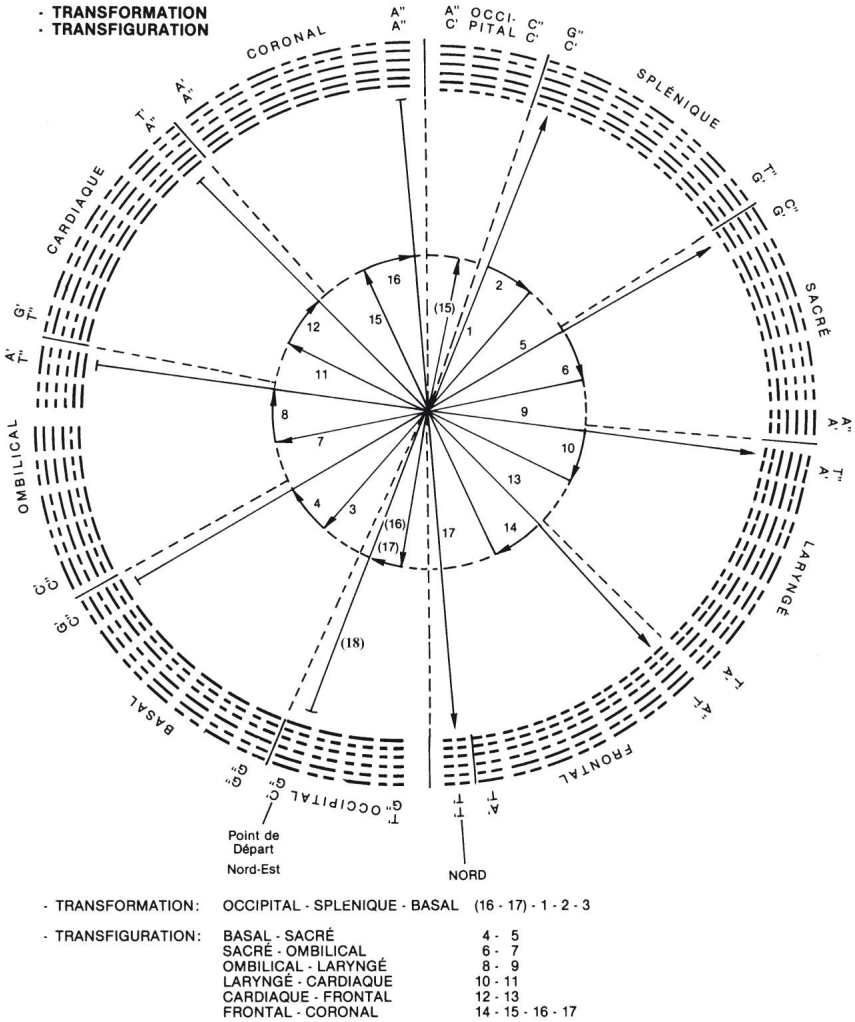

THE MORE BALD DIAMOND

- The six hexagrams/energies of the Laryngeal inhibit the Cardiac, diametrically opposed (except A''T' due to the shifting of the axes) awakening the six aspects of this center still dormant, which activates A''T' (11 -12).
- A''T' of the Cardiac inhibits its reverse T'A' of the Frontal, which activates the six other hexagrams/energies of the Frontal (13-14).
- The six hexagrams/energies of the Frontal inhibit the Coronal, diametrically opposed (except A''A'' due to the shifting of the axes) awakening the six aspects of this center still dormant, which activates A''A'' (15-16).
- A''A'' of the Coronal then inhibits its inverse T'T' (17), that is to say that the Sky joins and dominates the Earth; in other words, the Infinite, One, joins and dominates the center, matter, which necessarily energizes the whole of the Occipital. The latter, in fact, from C'A'' to C'C'' and from G''T' to G''C' is on the axis of symmetry of Yin and Yang, with connection through the center .

The Occipital is, as an axis of symmetry, the instrument of Creativity, ensuring the connection between Coronal and Frontal, but also between Splenic and Basal: it is the "Creative Vibration".

It then unifies the nervous system and the blood current through its complementary links with the Splenic, joint in C'G'', and the Basal, joint in G''G''. Prana and *its* seven "vibrational aspects" and *Kunda lini* and its seven "spheres of fire" are then also harmonized and unified.

THE MORE BALD DIAMOND

Board 41

The Flower with twelve golden petals of the Cardiac center can now shine in the center of the Crown chakra and its 960 petals, the four orange petals of the Basal forming the vortex of this whole.

In summary, at the end of the period of "Transmuta-

THE MORE BALD DIAMOND

tion", due to the rise from the Basal of the first sphere of fire of *Kundalini* and to its action, the centers were partially synthesized in the triplicity, having for support the three cephalic centers:

- the **Coronal** which controls Cardiac-Umbilical-Basal, that is to say the aspects "Love intuition", "Desire feeling" and "Will";
- the **Frontal** which controls Splenic-Sacral-Laryngeal, i.e. the aspects
- "Procreation", "Mental Creativity" and "Creative Intelligence";
- the **Occipital** which provides the definitive connection between the two preceding groups.

The Baptism of Jesus on the Jordan is the symbol of this "transmutation" by the "Fire" of water.

From the Coronal, the descending current of the energy of Heaven joining the energy of the Earth, brings about the "**Transformation**", and it is the tongues of fire of the Holy Spirit descending on the apostles at the Slope coast which symbolize this step.

The dynamization of the seven intermediate centers, between the Basal and the Coronal, by the rise of the other six spheres of *Kundalini fire*, represents the final phase of "**Transfiguration**" in which the energy of the Earth gradually becomes one with the energy of Heaven, One in Three. It is the Transfiguration of Christ on the mountain, in the company of Moses and Elijah¹⁴⁴, symbol of the unity of body, soul and spirit...

¹⁴⁴ See chap. 30: *The Diamond Man, Psyche, Energy and Soma*.

THE MORE BALD DIAMOND

7 Vehicles of Consciousness, 9 Chakras, 8 Marvelous Ships

It is now possible, starting from what precedes, to establish the definitive relations between the seven vehicles of conscience, the nine will chakras and the eight marvelous vessels. But we can only compare structures or energies located in the same field of coherence. We must therefore bring them back to the same common denominator.

We have seen that the study of the 64 hexagrams, from their constituent trigrams, taking into account the “little yang” series and the “little inn”¹⁴⁵ series, makes it possible to link these three aspects in the following way:

- 7 “little yang” series of internal Yin function: 7 vehicles conscience.
- 9 “small inn” series of Yang external function: 9 chakras.
- 16 series from the 8 trigrams: 8 Marvelous Vessels¹⁴⁶.

Their organization is given to us by the whole

¹⁴⁵ See chap. 2: *Growth or the Septenary and its avatars* and chap. 8: *The mutations of the I Ching*.

¹⁴⁶ One could think that the manifestation is of order “sixteen”, since the eight Wonderful Vessels are each represented by two series in the Yi Ching; however, these 16 series are complementary two by two (as well as each of the hexagrams that compose them), which brings us back to the eight fundamental trigrams from which 32 hexagrams are made up, the 32 others being only the “complementary inverses” (T'A"-A" T').

It thus appears privileged relationships on the one hand between the vehicles of consciousness and the organs, on the other hand between the energy centers or chakras and the meridians of acupuncture; all of these relationships are effected through the intermediary of the 8 Wonderful Vessels which, two by two, make up each hexagram and therefore represent, on the manifested plane, the synthesis of the 7 vehicles of consciousness and their 9 centers of consciousness. 'energy.

Ultimately, the I Ching, with its 64 hexagrams and 16 series, thus represents the common denominator of the 2, 4, 8, 7 and 9 energy structures:

- The two radical energies or 2 monograms, playing six by six, according to the 6 Qualities of Heaven and Earth, are $26 = 64$ hexagrams
- The four fundamental energies or 4 bigrams, playing three by three, according to the organization of the 3 Hearths, are $43 = 64$ hexagrams
- The eight secondary forces or 8 trigrams, playing two by two, according to their polarity, are $82 = 64$ hexagrams

THE MORE BALD DIAMOND

- $(7 \times 4) + (9 \times 4) = 28 + 36 = 64$ hexagrams

The 16 series of four hexagrams each thus specify for us on the one hand the play of the two monograms by six, of the four bigrams by three, and of the eight trigrams by two; on the other hand the value in hexagrams of the 7 vehicles of consciousness ($7 \times 4 = 28$) and the 9 chakras ($9 \times 4 = 36$). These 16 series therefore concern both the set of energies ensuring the mechanical and cyclical regulation of the organism (2, 4, 8) and that of the energies participating in the psychic and spiritual evolution of each being (7 and 9) .

Furthermore, it should be noted that the arithmetic mean of the 7 planes of consciousness and the 9 chakras corresponds to the 8 secondary forces/ wonderful vessels which are the synthesis on the manifested plane

$$\frac{7+9}{2} = 8$$

In this regard, we must remember that there is a mathematical constant that two numbers multiplied by each other give a result equal to the square of their arithmetic mean minus half of their squared difference:

$$\frac{7+9}{2} = 8 \quad \frac{7 \times 9}{2} = 31.5 \quad 8^2 = 64 \quad 31.5^2 = 992.25 \quad 64 - 992.25 = -928.25$$

We can therefore consider that if the Consciousness (C) is of order 7, its expression the Psychic energy (P) of order 9, the Somatic energy (S) of order 8, and half of the Difference (D) of the first two (PC=) of order 1,

THE MORE BALD DIAMOND

$$\frac{7+9}{2} = 8 \text{ and } 7 \times 9 = 82 - (-)2 = 64 - 1 = 63$$

Moreover, it should be known that, in a given system, if C increases, P decreases, or vice versa, while S remains constant. So if one of them tends to 0, the other tends to its own infinity and S remains constant.

For example, in the system above, when C decreases by 2 units, P increases by 2 units i.e.:

$$C=7-2=5, P=9+2=11$$

$$\frac{5+11}{2} = 8 \quad 6 \text{ and } 5 \times 11 = 82 - (-)2 = 64 - 9 = 55$$

We have just discovered two particular equations interesting,

$$\frac{C+P}{2} = S \text{ and } C \times P = S^2 - (D)^2$$

But, "what good is that? as Leibnitz said when he discovered the binary system!

In this case, it will allow us to better understand a universal phenomenon, that of birth and death.

We know that the energy (C) of the 7 subtle planes of consciousness densifies into the energies of the 11 organs, two of which have a double orientation, that is 9 organs. We then speak of "visceral entities", of the psyche of the organs. We also know that the energy (P) of the 9 chakras, which is denser, manifests itself in the energies of the 12 meridians, one of which has a double orientation, ie 11 meridians.

THE MORE BALD DIAMOND

We are therefore right to write the following equation concerning the nine organs (C) and the eleven meridians (P):

$$\frac{C+P}{2} = \frac{9+11}{2} = S \text{ or } \frac{C+P}{2} = 10 \text{ and } 9 \times 11 = 102 - (2)^2 = 99 \text{ (} C \times P = S^2 - (\frac{D}{2})^2 \text{)}$$

The corresponding somatic energies, S, of value 10, undoubtedly correspond, here, to the yin and yang aspects of the 5 Elements.

However, when the deep Yin energy, of value 9, leaves the organs (C then gradually becomes equal to 0) to accumulate and unify with the Yang energy in the superficial meridians¹⁴⁷ (P is ultimately equal to 20), we end up with:

$$0 \times 20 = 102 - (20)^2 = 0 \quad (C \times P = S^2 - (\frac{D}{2})^2)$$

$$\text{or again: } P = 20 = \frac{102 - 102}{0} = \frac{0}{0}$$

The consciousness (C) of the organs and the somatic energies (S) have disappeared in favor of the psychic energies (P) of the meridians.

However, it can be noted that:

$$\frac{C+P}{2} = S \text{ hence } 2 \quad \frac{0+20}{2} = 10 = S$$

But these somatic energies (S) are now only "potential", because the connection with the psy energies

¹⁴⁷ This energetic phenomenon is well known in traditional Chinese medicine.

THE MORE BALD DIAMOND

quids (P), constituted by the consciousness of the organs (C), has completely disappeared. They returned to "undifferentiation", in the reservoir of matter, the Earth.

A new differentiation/polarization in C and P must appear, for S to be able to manifest or for a new incarnation to take place.

Similarly, when the psychic energies (P) of the chakras, which are of value 9, abandon them to accumulate and unify in the subtle planes of consciousness (C), of value 7, we end up with:

$$16 \times 0 = 82 - (16)^2 = 0 \quad (C \times P = S^2 - (D)^2)$$

$$\text{or again: } C = 16 = \frac{82 - 82}{0} = \frac{0}{0}$$

The somatic (S) and psychic (P) energies disappear in favor of the Consciousness (C). The essential unit is then reached.

However, in a general way, **C** represents the center, **P** is the phenomenal expression of it, and **S** the resultant of the two, the apparent substrate.

Finally, it should be noted that each monogram, bigram, trigram, hexagram of the Yi King corresponds to a packet, to a "quantum of energy" and

148 C and P, organs and meridians, are the Earth and the Sky of the somatic manifestation (S) which is the substrate.

149 C and P, consciousness of the 7 planes and energy of the 9 chakras, are the Sky and the Earth of the somatic energies (S) which are the substrate.

THE MORE BALD DIAMOND

that the passage from one to the other can only be made by "jumping", from the most Yin to the most Yang or from the most Yang to the most Yin, according to the binary order...

The undulatory aspect which is inseparable from it is that, cosmological, cyclical, which emerges from the movement from extreme Yin to extreme Yang, from night to day via the intermediary of dawn, and from the extreme Yang to the extreme Yin, from day to night through twilight...

This is how the Seven and the Nine, "waves of light" and "quanta of energy", remain the only moving and elusive reality, in perpetual transformation and in constant evolution, within the illusory stability of the 64 mutations. of the I Ching, from the Nothing which is Everything, towards the Everything which is Nothing !

150 Wouldn't this equation then establish the relationship between wave mechanics (C), quantum mechanics (P) and Newton's physics (S)!
